Dick Carroll <dixie@townsqr.com> wrote:
>Fighting it is almost always folly and more costly than just paying up.

Years ago the Arizona Highway Patrol, which has responsibility for the freeways running through Phoenix, cited violators into Phoenix City Court. But the judges there found *against* the officers all too often. They finally got fed up and changed to citing their violators into the county JP courts instead, where they got a more fair shake (according to them)...   :-)

BTW our county JP judges *don't* have to be lawyers,
 so they often have some common sense...   :-)

>Mostly you don't have to go to court, just mail in your plea form
>and fine, from the fine schedule you get with the ticket. In these
>parts, at least.

Here too. Also you have a school option which takes some time, costs as much money, but keeps the violation off your drivers license which is good for insurance rates...

Most any decent court will throw that out as being insufficient
(i.e. a deminimus) difference to warrant a ticket to begin with.

Yep,paid my dues several times that way.  Arizona was
the easiest as you could plead the equivalent of no
contest, pay the fine and the ticket never shows up
on your license.

It has never worked that way here Bill. You always got the points with
a no contest plea. The only way to avoid the points was to beat the
ticket or go to school...

Would you swear to that?

>and it's
>OK to talk about the word itself, e.g. "swear".

I see. So you don't swear but you may "swear". OK.

> It is not OK to say,
>"I swear to <something>".

The actual claim is that you "swore" NOT to do something. However, no actual evidence of such has been presented. Besides, we all know that any evidence presented from a rrap post would simply be dismissed as by the fact that you were "not serious".

>Dave claimed that I swore never to get an
>Extra license. He is lying.

No. He's simply mistaken. BIG difference.

Let's see - three uses of "swear" and one of "swore" in this post, not counting my use or quotes of old posts. Of course none of them were actual swearing, so they don't really count.

btw, which definition of "swear" are we using? The one that means "taking an oath or promise" (as in "I swear to tell the truth, the whole truth..." or the one that means profanity ("He swore like a drunken sailor...")?

--

I still think you guys should settle the proposed bet by sending the money to me.

That's certainly what you lead us to believe.  I guess you weren't being
serious, huh?

A friend sent this to me today. Normally, I hate to clutter up the ham
NG's with this type of thing, but being as it's a day old, the quicker
the word gets out , the better. This is not a joke or a troll...This is
a plum ugly new virus that will ruin your day if you open it. I'm just
passing it on, so someone doesn't later say, well... why didn't you say
something... MK

Your troll-o-meter is defective, or it has a huge preamplifier in the
detector circuit.  That post hardly budged the needle on mine!  What's
more, the Armenian Judges are snoring so loudly I can't hear my
Eagle's CD on the stereo!

Hey Bert,

Check out www.sugardelta.com, holy smoke! What a gorgeous 11 meter site. I'm glad to see the organizational skills rising among the 11 meter DX groups.

Let me know how you like that Alinco. Programming it is not all that much fun, but it's a solid little performer. I have an Alinco DX-77 too and I must say, they make reallty quality gear. Take care.

Actually Dwight, the fact that Larry here is using AOL as his ISP
speaks more about HIS intelligence and technical expertise than
anything he could post...   Of course, the fact that he composes
newsgroup posts on Word 97 and then pastes them into his AOL
newsreader window instead of just keeping a dictionary near his
computer indicates quite a bit about his level of common sense as
well.

I think your points are valid, but it would've taken the same amount of effort(or less) on your part to kindly point him in the right direction. In other words, it wasn't the content, but rather the delivery.

I know this is usenet and not AR but it's a usenet group about AR, comprised primarily of ARO's who could be setting a good example for those who are considering becoming an ARO. I may check my callsign at the door when using usenet, but certainly not my manners. I didn't learn decent etiquette from a technical resourse, mom and dad taught me that. 73 and good day.

Cecil, the solution is obvious, thanks to RRAP: Permit entrance
only to officially licensed purple martins.

Cmon Larry, if you used a *real* news reader (with a built in spell checker), you wouldn't have to go through all those cutting and pasting hoops. Is it beyond your technical ability to run something besides AOL... :-)

Then you need to get a new meter. His meter detected a troll, period. Don't
you think that something as dumb as a meter would register a 10 on, as you
say, something as transparent as "ARRL's" post? Also, try using your spell
check. When a person flames another but in the process misspells a simple
word as "generous", they tend to lose all credibility.

Isn't it illegal to refuse service to an individual based on race
or color? Speaking of which, I saw on the Discovery Channel where
a hundred thousand years ago, there were six different species
of man (hominoids) in competition with each other. Can you imagine
how complicated our laws would have been if all of those species
had survived instead of just the meanest one?

Larry,

>This is not amateur radio; it's Usenet. If you don't know the difference,
>you'd may as well turn your ham ticket also -- assuming you have one.

You must be kidding. The issue is not whether ANYBODY knows the difference between amateur radio and a newsgroup. The issue is a bout a mean spirited person who choose to respond in a rude and obnoxious manner rather than give a chap(ham or not...a fellow human being) a "gentle" shove in the right direction. If YOU don't know the difference, you'd may as well turn in your birth certificate - assuming YOU have one. Feels nice when people are mean, eh? That's really NOT my style, I just want you to "catch a clue."

>Our society is dumbed-down, our hobby
>is dumbed-down, and I, for one, am sick of it!

Seek therapy, don't take it out on others.

Hey Mark,

Yeah, it's a bute, eh? They're a pretty large group now, nice to see. Check ot the software section, as a programmer; This is where I "gravitated" first...really nice. I downloaded the logging program and fiddled with it for a while, good stuff.

The Alinco's really nice. As I said, I'm a fiddler so tackling the programming isn't too bothersome. The HTX-200's ok, but just that...ok. I like the fact that I can slip it in my shirt pocket though. Later.

There is a time and a place for everything. In this particular case, it
probably wasn't either. But step back a minute.

Everyone finds Yahoo. So type in 'FCC' to go the moose. You will be
thoroughly confused, dismayed, chagrined and all that good stuff. Now
type 'ARRL' which may or may not be helpful. This is not rocket science.
Now and only now can you go the newsgripe with a clear conscience and a
clear question.

Strikes me there is enough skunk shit available to smear everyone several
times over. Anyone in a supervisory position eventually develops a case
of the aggravated surlies in similar situations and Larry played Master
Sergeant which is not all that unbelievable as he was one not that long
ago.

In the long run of things a steady diet of pats on the back don't make it.
There is a place for a size 13 to the buns.

Nope. Not at all. It's textbook.

>If you don't believe that then you believe that
>some citizens should be granted the privileges without being forced to
>meet the requirements. That's not fair, Steve.

Life's not fair, but I guess you knew that.

>That "authoritarian structure" is what FORCES citizens to obey the >laws, rules, and regulations, Steve. You are making my argument for >me.

Citizens ARE the law. That's nothing I had (or could) make for you, Cecil.

>In order for citizens to obtain the privileges granted by government, they
>are forced to meet the requirements for those privileges

OK, Cecil....You say we are forced. The only person you are fooling is yourself, but if that's what you believe...have at it.

>An "authoritarian structure" cannot exist without force to back it up. >Why is that so hard for you to admit and accept?

There's nothing for me to "admit and accept". You "insist" that we are "forced" to do the things necessary to achieve what we want in life. I "accept" it as a challenge....YOU, on the otherhand, percieve it as "forced". I still think you consider yourself victimized.

These outlaws are certainly conducting communications. Just
not "authorized" communications.

Note that there is a strong distinction between "harmful
interference" which can only be caused to authorized
communications and "any interference" which doesn't have this
"authorized" qualifier.

Section 97.101(d) doesn't refer to "harmful interference",
it plainly states "any interference". If the Commish' wanted
carrier throwing and music playing to apply only to
interfering with authorized communications the term "any" in
Section 97.101(d) would have been replaced with "harmful".

Did the Commish' miss this one? My private guess it yes, they
probably did, but until it is so corrected that's the way the
rule reads.

I wouldn't want to be the pigeon who gets caught by someone
who is astute enough to pick up on this distinction and is
inclined to make it stick.

You got it.

About seven years ago, a local REACT group asked me to sit in on a court hearing that they were going to have in a case involving a rival CB/GMRS group over who was going to handle "public service" in their area. This situation got so heated with threats and namecalling that they had each applied to the court for restraining orders against each other. I needed a good laugh at the time so I went and sat in on the hearing.

This case was heard in the court that hears domestic abuse orders, and in those cases typically one or both parties show up, sometimes with a lawyer, sometimes without, and it's almost a "done deal" by that time. These guys show up with a dozen witnesses each, complete with hats and HTs on the belt.

The judge, sensing the "uniqueness" of the case, puts it to the end of the calendar. When it was their turn, the folks on each side get up and continue the on-air and in-person bickering one against the other. Half way through the judge advised them that the court fee covered a one hour proceeding, and that if they ran ten seconds over the hour she would charge them a second fee. At the end of the hour the accusations were going on and on and on, and the judge finally said "OK. I've heard enough. I rule that each of you is restrained from dealing with the other, and if I see any of you back in here on this matter the results will be very unpleasant for all involved".

Although I don't agree with The Congress on this, I can certainly see why they don't want to spend two cents on problems involving the CB Radio Service.

200 pounds at last check.

You are correct on the automatic IDer speed in any radio
service is 20 wpm, which is the speed at which FCC enforcement
agents whose jobs include monitoring are required to qualify
although many of us could copy more.

Exactly! Which is why cases are often NOT prosecuted
at all or plea'd down...the time value of the prosecutor
isn't worth the time to get the conviction.

Cheers,
Bill K2UNK

It was a joke, Jeff. There isn't a meter, and my message wasn't a flame. And I certainly wasn't seeking "credibility" with nonsense such as this.

As for the fake meter, it isn't an on/off meter (on for troll, off for no troll). It is a meter that rates a troll on a scale from one to ten. Since this troll was so obvious, it simply doesn't rate very high as a troll in my opinion.

However, since you control your own fake meter, you're free to rate the troll how you want. And I assure you that I will not hold your troll rating against you. [insert big grin here]

Which is why some US Attornies would not take our usual CB seizure/forfeiture cases because the linears to be seized weren't worth anything near what the dopers' Lexuses were.

Funny - my prosecutorial attitude was that I had all the time in the world once the defendant met the threshhold of "did he do it or did he not".

When my boss would ask "how long are you going to sit on that case" my answer was "until we catch him with his hand in the cookie jar". I had a monitoring tech who could literally sit in the car for eight hours straight waiting for someone to come on the air and not be bored at all.

This wasn't in Washington State, was it, Phil? Many years ago, I saw this very thing in action (it would not surprise me one bit if the parties ended up in court eventually). There were two REACT groups, fighting over the same radio turf. They were even fighting over who had the right to the virtually identical club names they had selected.

On more than one occasion, operators from each group tried to handle the same radio call, which resulted in a long fight over who had the right to handle that call (these calls usually ended up unanswered).

Whenever the two groups got together (coffee breaks were common back then), it almost always ended with an exchange of words between several members of each group. Both groups were even asked to leave one resturant when the bickering got too loud. And I heard that on one occasion the "discussion" ended with an exchange of fists between two of the individuals (though I didn't see this myself).

To make matters even worse, two groups spun off from these groups and started still two more groups (again wanting to cover the same area). I left the area right after this, so I don't know how these four REACT groups eventually got along.

Sounds like you indeed do believe that some people deserve to be granted special privileges without being forced to meet the requirements. Sorry, but I disagree. Every citizen who is granted the privileges should be forced to meet the requirements. There should be no exceptions.

> Citizens ARE the law.

Dream on, Steve. Try robbing a bank and see if you, a citizen, are the law.

Nope, I don't, Steve. That's just your straw man attempt at diverting the real issue which is: In return for certain privileges, our government forces its citizens to meet certain requirements. That's what governments do. Our government tries to be fair and enforce those requirements equally upon all citizens. Who, in your opinion, should be granted the privileges without being forced to meet the requirements?

I'm not trying to debate you, Larry. I'm just trying to point out how outrageous you sound when you post negative messages. First, you fail to gain any positive results from such negativity. And, second, you degrade yourself through such behavior. I've seen enough of your messages to know that you're an intellegent person, so you don't need such stupidity to get your point across.

As for the spelling checker, I ended that a very long time ago. I don't want to spend my entire time in these newsgroups, so I've simplified the process as much as possible. Since my spelling mistakes are relatively rare (often the result of quick typing), the extra step of using a spell checker was eliminated.

By the way, I'm still laughing over the "pony-tailed, multi-pierced, pot-smoking liberal" nonsense. Absolutely wrong on each point.

You know, I have never noticed that Larry uses AOL to access the internet. I seldom pay much attention to things like that. However, that may partly explain why he gets into these negative moods so often. It seems to be a relatively common thing among AOL users (perhaps resulting from the monthly bills they pay - somewhat like the PMS that some women experience on a monthly basis).   :-)

Now you know, Cecil. I can't spell because all the pot I'm smoking has messed up my mind, and I can't sound out the words because the tongue ring gets in the way. Besides, being forced to spell correctly would harm my self-esteem (something every liberal knows is a bad thing). :-)

But, don't worry, I'm still calling you a liberal. Heck, even in the context of the description Larry gave of me above, you're still more of a liberal than me.

Well, more like FT 1000MPs. You don't have to have a license to buy one.
Many of the rigs being used for mobile CB nowadays go up through 2 meters
and even 440. It wouldn't take too much figuring out that VHF/UHF FM sounds
much better than 10 meter AM along the highways.

Have you been taking correspondence classes from the Lennie the Liar School of Newsgroup Insinuation And Obfuscation?

>Every citizen who is granted the privileges should be forced
>to meet the requirements. There should be no exceptions.

I'll get my whips and chains and get right to work.

>Dream on, Steve. Try robbing a bank and see if you, a citizen, are the law.

Present day jurisprudence gives far greater protection to the accused than the victim.

>Nope, I don't, Steve. That's just your straw man attempt at diverting the
>real issue which is: In return for certain privileges, our government forces its
>citizens to meet certain requirements.

No "strawman" here Cecil. Call it "forced" if you want to. As I said, it's a matter of perception. You consider it forced, then who am I to argue with you?

>Who in your opinion, should be granted the privileges without being forced to
>meet the requirements?

Me, for one. I wasn't forced to do anything. As Lennie says, "Your mileage may vary".

I think we need a "special" troll-o-meter for RRAP. Here's my proposal:

```
    S9 +20 +40 +60 +80 +100 dB
                       /
                      /
                     /
                    /
                   /
                  /
                 /
                /
         TROLL-O-METER
```

It is, Cecil, but that's not what you would be doing. You would institute a *skills* test that would reserve choice real estate only for those birds that can catch 20 bugs per minute on the wing and eat 20 bugs per minute in the air. These birds would be licensed as purple martins. Inferior birds that can only catch and eat 13 bugs per minute would classified as sparrows and allowed to nest in the less desireable places under the eaves. Birds that failed that test would be classified as "no-bugs" and left to fend for themselves in the vast open areas where the commercial hawks roam. (It's allegory time, folks!)

Well, let's backtrack. I said every citizen should be forced to meet the

requirements before receiving the privileges granted. You disagreed. What am I to assume from that disagreement except you think some citizens should NOT be forced to meet the requirements before receiving the privileges granted?

I understand now, Jim. What should I do with the hungry birds?
Let them eat cake?

Well, Libertarians are half liberal. We are social liberals and
economic conservatives. That follows directly from believing in the
least amount of laws (increasing freedom) and the least amount of
goverment (decreasing taxpayer cost) that is necessary and sufficient.

You're talking about a process that I can do so quickly and
easily, it takes longer to explain how to do it than to *do* it.
I do the selecting, cutting, and pasting with Ctrl-key sequences;
it is much easier to take advantages of the spell-checking,
dictionary, and thesaurus functions of a fully-functional word
processor than it is to thumb thru the pages of my fairly large
and heavy Merriam-Webster hardcover dictionary -- even though
I do use it quite often.

As to using AOL as my ISP, you're wrong about that. My ISP
is Magpage.com; I only access AOL thru it. I like AOL's
newsreader because it eliminates a lot of unnecessary crap
found in other newsreaders; and besides, when accessing AOL
thru my ISP, its only 9.95/mo. for unlimited use, and gives me
access to other forums and chat rooms I've been using literally
from the beginning of AOL service (I was one of the first 1,000
customers).

Can't quite subscribe to that theory Dwight, as I pay top-notch rates
for my high bandwidth ISP, quite a bit more than the typical AOL
jockey.  AOL does, however, seem to attract what may be called (with
tongue placed firmly in cheek) the lowest common demeanour....  ;)

Perhaps part of the problem is that with that approach in any other
country in the world you would be called a 'liberal'.

I often describe this position as being a 'Goldwater liberal'.
Unfortunately you have to be of a certain age to grok the meaning.

Like so many other things, the result is the product of one's assumptions
about people and the proper role of government.  We both, I suspect,
harbor a similar outlook toward drugs and in doing so incur the wrath of
both the moralists and the goo-goos.  Some days it don't pay to get out of
bed.

Trouble is, liberals changed their tune down through history. They
once wanted to *liberate* the masses from governmental oppression.
Now they want to use the welfare state to enslave the producers AND
to enslave the masses and breed more welfare state liberal voters.
What happens when the majority of voters are on welfare?

If one is the dispenser of loaves and fishes it is one hell of a lot
easier to be re-elected.  Worked for every machine politician since
Tammany Hall.

There is the classic story of the man running for township road
commissioner.  In a speech he pointed out that his incumbent opponent had
the best road in the township going right past his farm.  One of the
spectators, taking his thumbs out of his overalls, shouted out, " Then why
in hell should we elect you.  He already has HIS road."

We get the government we deserve.

I'm sure your intention was good, but if you go to the mcafee site
(the one your message references) and look under hoaxes you'll find
this message, and it's represented as a hoax.  The text is only
slightly different.  So what your friend sent you was possibly in
error.  I make no judgement of him or you.  However, there are a lot
of hoaxes as well as real viruses going around.  You might go there
and check it out.  It's interesting.

Just thought you'd like to know.

Tony

I haven't been a member of MENSA since 2000. The dues went up to $45.

Although this one is a hoax, there is a very nasty one that is NOT a hoax - it has"nakedwife.exe" as an attachment. It does not seem to be spreading as wildly as predicted. Perhaps everyone is beginning to learn not to open mysterious mail messages.

Interresting case.  Fairly clear cut though.  Didn't seem to involve a lack
of FCC enforcement of Part 95 rules.

I noted your comment about the 'two for one' deal. I suppose that may be
the price for getting the FCC to take notice of the illegal incursions into
the ham bands, and begin to enforce their rules. Why are the "properly
trained enforcement attorneys" not interested in these particular rules
violations?

```

The presumtion is that anyone who has been issued an amateur license has met the requirements to the FCCs satisfaction. It's not clear why the validity of the logic underlying this presumtion should now rely upon a rare exception you might happen to cite. Because it is true that all hams were required by law to demonstrate their qualifications to hold an amateur license.

>when I was tagged in AZ (NJ license).

If points didn't show up on your license in NJ because you got a
ticket in AZ there could be several reasons:

-The ticket was a non-point offense.
-AZ possibly didn't have reciprocity with NJ at the time.
-The system screwed up (most likely).

But it was *not* because you pleaded no contest.

From the Phoenix Municipal Court web site:
" Plea Of No Contest - This plea, also known as nolo contendere,
means that you are not admitting guilt and not denying it. You are
saying that you do not wish to contest the state's charge against you.
Upon a plea of no contest, the Judge will enter a judgement of guilt.
Unlike a plea of guilty, a plea of no contest cannot be used against
you in a civil suit."

As you can see a plea of no contest is entered as a *guilty* plea by
the judge. This is what produces the points. The reason for a no
contest plea is simply to avoid having the evidence of a guilty plea
used against you in a civil lawsuit, which normally results only from
traffic accident related citations. I spent many hours in that court
from 1968 to 1992 and I did see many misguided citizens plead no
contest in non-accident tickets because they thought that they were
innocent, but didn't want to go to trial. The judge didn't care, but
carefully explained to them that the fine would be the same and points
would be issued...

Its a rare court in these parts that will toss out a complaint by an officer without some really strong evidence against it. I don't know the outcome of that case but most likely he mailed in his fine. That way he doesn't have to take az day off from work to go to court, then probably have to pay just as much fine, or more, than if he had gone ahead and mailed it in. Nothin' says the judge has to stick with the published fine schedule if he finds reason not to....you standing there arguing how innocent you are might do it.

Another one I received a couple times is an email message with no address, no signature, no text, nothing except an attachment titled "Norton Antivirus Report". My Nortom antivirus program grabbed it, Id'ed it as a virus and quarantined it. It wouldn't be smart to open any attachments.

Do you suppose that Lyn's boss County Attorney Rick Romley would approve of one of his top attorneys taking the county's time and money to make an example of a newsgroup freeway speeder? Our local newspaper The Arizona Republic would love such a story considering how the public feels about our freeway speed limits and wasted tax dollars. Thank God for the press to control those maverick attorneys...   :-)

Hi Bert,

I'm sure that the law of averages says that somewhere, someone's been pinched by this rule. Common sense would similarly dictate that it would likely have been in conjunction with a more conspicously egregious offense. (A couple of hundred watts worth...perhaps?) I went for a solid ten years or so with 30 watts and I've never attracted any unwanted attention or actually heard of anybody else even receiving so much as a warning.

You know my credo though, be good. If you can't be good, then be careful. It's far better to be good though. I just picked up an Alinco DJ-V5TDC, good little h/t at a reasonable price. Bert, weren't you looking for a good 2m h/t? Here it is. I got the clear model, kinda nice actually. I wanted something small and unobtrusive for my desk at work, this fits the bill perfectly. I though about the Radio Shack HTX-200. You know what happened there...and so does Radio Shack.;-) Take care.

I didn't suggest that it might be a hoax.
I flatly declared that it is undeniably a hoax.

> I did get it from a fairly reliable source.

Formerly reliable source.

> I just passed it on as a note.

You could easily have checked the facts on any of many websites which list this prevalent hoax.
Though it contained so many tale tell signs of being a hoax, that only a novice would be fooled by it.

My brother got it yesterday was notified by his norton antivirus that

```
his boot sector was trying to be changed.
if it is a hoax why is it being detected by Norton antivirus

Too late, I beat you. I got em' both. I use the HTX-200 to "bat about" at work,
and the Alinco I handle with more "kid gloves." Thanks for the advice though.
My XYL is taking her Technician exam soon so she'll inherit the HTX-200. Thanks
again and take it easy.

You really sure, Tony?? This is direct cut-and-paste from the McAfee site:

W32/Naked@MM (NakedWife Virus) Help Center
W32/Naked@MM is a HIGH RISK virus that is spread using the Windows email program Outlook. The infected email can come from addresses that you recognize. Attached is a file named NakedWife.exe, which poses as a Flash movie. When run, it copies itself to a TEMP directory and displays a window

entitled "Flash" which reads "JibJab loading".

Moral of story: Don't open .exe files attached to email.

Yes.

> This is direct cut-and-paste from the McAfee site:

And if you read it, you will see that it has NOTHING to do with the hoax that was posted here which was about "A Virtual Card for You" and "An Internet Flower For You".

So when you get unmixed up, you will see that Tony was right and you were confused.

Your brother is confused, mistaken, misunderstood, or non-existent.
"Virtual Card" is a hoax.

  The value of the case is not whether it involves CB, but what
  factors are or must be taken into account in determining when
  an otherwise legal transmission in any radio service becomes
  malicious interference.

1. The Congress wants CB and its problems to go away without any effort or attention on the part of The Government (read: "money" for "effort"). See what's happening now with the OSHA ergonomic rules, where The Congress is substituting its political judgment for the agency's technical judgment (in apparent violation of a long line of Federal Appellate Court rulings).

2. The powers that be at the FCC do not have the backbone to confront The Congress on enforcement issues.

3. Those qualified agents and attorneys who are left are directed not to deal with it by their superiors, the responsibility for such decisions eventually reaching up to a level where the individual has no knowledge of the problems in the various radio services and may care even less, thus fulfilling The Congress' desires.

The theory of Chekhov's Dog applies (note well -I will refer to it from now on) -- the prince kicks the duke, the duke kicks the next lower nobleman, eventually the janitor gets kicked and turns around and kicks his dog.....

Now that everyone knows it is a hoax, wouldn't that be a perfect
title for a real virus?

<<I just can't see your position on this. If I want to use 28.085 under the terms of my license for CW/digital and there happens to be a bootlegger there, I cannot see how you would want to paint me with a criminal brush. To me, it is quite simple. I am LICENSED for that frequency. As long as I use it in the manner for which it was intended, I cannot see your position of (seemingly) making the ham out to be engaging in deliberate interference. Thusly, if I send out a series of CQs on top of some idiot who has no business being there, I am perfectly legal. If I begin to play music, holler at the truckers on AM, set a dead key or a continuous tone, then I am operating outside of the terms of the use of that sub band. In that case, I AM operating my station illegally and the truckers don't really have anything to do with that--it's something I agreed to (that is, to operate within the regulations) when I obtained my license. If I send out CQs and no one answers, I can't help that. And my "intent" cannot be questioned. 73 Jerry K4KWH >>

I agree and like the way you expressed that, Jerry. I spoke briefly with Mr. Hollingsworth at Dayton last year (he seems a reasonable man), and should he have any problem with what you have said here - I would like to speak with him again this year on just this subject. Hope he attends Dayton again; he received lots of applause last year.

"Pay-to-Pay" (e-file) is not the smart way.
If only IRS were really a "service" !   AK

I would hope that Rick respects and agrees with Lyn's judgment on what is worthwhile to pursue and why.... <ggg> Lyn stepped down from being the Bureau chief because he really enjoyed trial work more than he enjoyed the administrative BS, but he's still listened to very much. He's ready to retire, anyhow (aren't we all....)

I, OTOH, enjoy pursuing the nitpicking/picayune cases "just because".... <ggg>

Of course. My point was that the case did not involve someone who was
operating without operating privileges. I'm sure other case precidents
would enter significantly into the matter, and the outcome would probably be
different than the one in the case you cited.

That's a pretty good list of excuses there, Phil. Now go to work on a list
for why hams shouldn't be blamed for the interfernce they are caused by
truckers using their bands, and maybe you'll have made a difference.

>   The theory of Chekhov's Dog applies (note well -I will refer to

So the dog is whom - the trucker, or the ham?

Have at it.
I don't use MS Outlook or IE.
I don't run attachments.
Hoax or not, I am not susceptible.

"Required by law" is the same thing as "required by circumstances" where the circumstances are the law. "Required by circumstances" is the definition of "forced". Yet Dick says he was not forced to pass a Morse code exam, i.e. he was not required by circumstances to pass a Morse code exam. If he was not required by circumstances to pass a Morse code exam then he is admitting that he didn't meet the requirements. It's all perfectly logical.

Let's summarize, Dick. A person with an amateur radio license was
required by circumstances (forced) to meet the requirements for an
amateur radio license. Any person with an amateur radio license who
didn't meet those requirements is a criminal. If you were not required
by circumstances (forced) to meet the amateur radio requirements then
you obtained your amateur radio license through fraud.

Here's what I said in the original: I took my 13wpm code exam and
passed it but flunked the written exam for Conditional. A month
later, I retook the written exam without taking another 13wpm code
exam. The second ham called the first ham who verified that I had
passed the 13wpm exam a month before and he assumed that I had
not forgotten the code over the last month. The posting was designed
to get your dander up and it certainly did. Your dander is still up.

I believe that the "NakedWife" virus that you refer to might well be real, but I was referring to the "VirtualCard" one that he referenced. I thought my message was pretty clear - maybe not. Notice what I had in parenthesis.

But I agree totally with your moral. I even carry it a bit further, I don't open *any* attachments without careful steps, and running a virus protection program. And I still got hit once.

Tony

Five, if you don't identify, you're breaking FCC rules. If you do dentify,
you're giving away your identity.

The answer is to use and occupy 28.085 legally BEFORE the truckers do, not
after. Then they are interfering with you, not the other way around.

I love that story.

Other popular urban legends are the "Mexican rat/dog", the "baby formula savings bond", and the "JATO rocket car". Whole NG devoted to them.

>(except for those "draw a diagram of..." questions).

The "draw a diagram" questions disappeared in the '50s.

The old tests were much closer to the technology in use by hams of the day than today's tests are. You did not know the exact Q&A beforehand, nor even the number of questions on the test. Sample test? No such thing - just the study guides.

>.....
>>>>No Bash books, no CSCEs, no VECs or test sessions at hamfests, all test

>>>format.
>>
>>But you did not KNOW ahead of time that the questions
>>and answers would be so similar.
>
>Sure we did.

Maybe you did, but most of the folks I knew taking ham exams in the '60s didn't. For example, we knew there would be Ohm's Law questions on the exam, but we didn't know what they would look like. So we learned Ohm's Law backwards and forwards, just in case. The problems turned out to be pretty simple, if you knew Ohm's Law.

>The testing on which those manuals was
>based didn't change dramatically from month to month.

We didn't know that either. Of course we know NOW that there weren't many different tests (that was part of the reason for the 30 day wait), But the hams I knew did not know that there were only a few different tests.

>Did we know the exact questions? No, but clearly the
>license manual publishers had a solid track record of
>providing more than enough material in an abbreviated
>form (the license manual) to enable people to use
>the manual and pass the tests.

The FCC provided a study guide. The ARRL manual simply reprinted it in the LM.
>
>>Today, a prospective ham knows that the exact Q&A in the study guide
>>will be on the test.
>
>Yet the syllabus of those questions being used takes more
>pages to print than any of the old license manuals did.

Because the new manuals explain the material in detail. They are meant as stand-alone guides. The old fifty-cent LMs urged the reader to read other books as well. Some folks managed to pass the tests using just the LM or AMECO books. Others used more extensive materials.
>

For that question, yes. Many of the questions were a bit more involved than "what is the unit of electrical current".

The Extra questions in the old LMs were quite interesting. 279 study questions, all essays....

But an Extra was not needed for full privileges until 1968.

>was still growing...as it is today.

The knowledge base is not so much larger than it used to be - it's very different. And the role of "radio" has changed. Time was, radio was a big part of electronics - in fact, radio and TV made up most of the electronics industry. Today, radio is but a small part of electronics, eclipsed by computers and other technologies. The cutting edge of communications isn't even electrical anymore - it's fiber optics.

>The ironic part is that
>while the complexity has increased by many orders
>of magnitude, the quality and reliability have also.

That has been a constant since the earliest days. A 1940 radio was far more reliable and used better components than a 1920 one. WW2 made an enormous difference in this regard, as mass production of highly reliable electronics was necessary to support the war effort. (The proximity fuse story alone is a case in point). After the war, both military and commercial demands kept pushing the quality/performance/reliability requirements. The computer and space industries got into the act, too.

The end result is that the definition of "component" began to change. In a PC, for example, the various boards are really components in most cases.
>

Agreed. With inflation, these prices are even lower than they appear at first.
$300 was a lot more money to the average person 30 years ago.

>Several years ago I read marketing article that
>stated the price point for "impulse purchase" was
>about $300. That is, if something costs 300 or

I agree on the $300 number, but I would call it the "threshold price". When the
price of something gets down that low, the market for it expands tremendously.

But there aren't a lot of HF ham rigs for under $300. 'Specially ones with all
the latest features, multiple bands and modes, and ~100 watts.

>
>Why? The General had significant HF phone
>bandwidth.

I was speaking of the old pre-1953 system, where Generals had only 160 and 10
meter 'phone on HF/MF. They could use all amateur frequencies, but the other HF
phone segments required a Class A (pre-1951) or an Advanced or Extra
(1951-1953).

After November 22, 1968, the amount of spectrum available to Generals in the
80/40/20/15 phone bands was cut almost in half. But starting in 1972 the phone
bands were widened, and as the years went by the available General spectrum
increased to about what it had been before. I can post exact numbers if you
want.
>
>>For serious CW, you needed an Extra.
>
>Why?

Here I'm talking only about after the 1968 changes. Sorry to be so unclear.

The "lower 25" are prized for a number of reasons, and "serious" ops want all
available privileges. Just my opinion.
>
>>>>The period of "Generals get it all" was actually quite short - 15 years

All true. But ONLY 10 meter phone - no other HF phone bands.

>If 5 wpm is soooo easy and the tech license written is soooo
>easy, why hasn't there been any great drop in illegal CB
>activity?

Because many of them are motivated by 1) and/or 2), above, not by 3).

>>>years.
>>
>>The big commitment of resources is in enforcement, not license testing.
>
>No resource commitment is needed in license testing.

Sure there is. The FCC has to do the paperwork for every upgrade, approve the question pools, do a lot of admin work. By simplifying the regs, a lot of that is eliminated.

Under the old system, a ham could theoretically upgrade as many as 4 times. That meant a new ham who started as a Novice or Tech and worked up to Extra one step at a time would generate a total of 5 FCC transactions while doing so - the new license and 4 modifications. The new system cuts that almost in half - a new ham who starts as a Tech and works up to Extra generates only the new license and 2 modifications.

>The
>system appears to work quite well...or do you think
>otherwise?

Which system are you talking about?
>
>>And
>>that commitment came because of endless requests and complaints from the
>ARRL,
>>other ham groups and individuals.
>
>I care not why or how it came about, I am simply happ
>to see the enforcement.

Every ham should care how it came about, because without those who asked for it

(like the ARRL staff) it would not have happened. Without a strong national
organization, ham radio won't last very long.
>
>>The R&O changes created a short-term flurry
>>of activity, but will result in long-term savings because the whole
>structure
>>is simplified.
>
>Savings for who? On what basis?

See above. Every transaction costs the FCC resources. Reduce and simplify the
transactions, and the cost is reduced. That's why the license term was doubled
to 10 years - it saved the FCC at least a thousand person-hours per year back
in 1983. Today it's probably twice that - which means they have an entire staff
person free to do other work.
>
>>One interesting side effect is the number of Novices who have renewed since
>>April 2000. Maybe their interest has been renewed, too.
>
>The novice numbers, however, are dwindling rapidly.

Not much more rapidly than before April 2000. And since there are no new
Novices, that is to be expected.
>
>>>>Think about that question, though. Why would anyone operate illegally when
>>>>so much is available legally?
>>>

>signals.

It's still a tiny piece of the pie.
>
>>No 'phone or data anywhere else on
>>HF/MF. If you don't want those limited privileges, you need at least a
>General.
>
>But you were talking about those pirate and bootleg CBers
>who operate 11m...are you now addressing some
>unknown pirate operations in the lower HF segments?

No, I'm simply pointing out that the spectrum and propagation that an "11
meter" op gets by going legal is not very different than what he/she is used

to. To get legal HF spectrum that has very different propagation requires a
General.
>
>>Pre-R&O General meant 3 written tests totalling 100 questions and 13 wpm

>difference.

I think it does.

> On my trip to Extra I took and passed
>6 tests (Novice, Tech/General, Advanced, Extra
>and both 5 wpm and 13 wpm).

I took 7 tests, over a much shorter time period. Novice, General, Advanced and
Extra written, 5, 13 and 20 wpm code, all within 3 years.

> I care not one iota
>that others can do the same thing now via only
>four tests, nor that some others took 8 tests to
>do it.

Nor do I. That's not the point. What matters is that prospective hams used to
be faced with taking and passing many more tests than they are today. Don't you
think some of them looked at the whole process and were discouraged by the
sheer number of tests?
>
>>The "price" of full privileges has been reduced even more. But remember, the

>the
>>past.
>
>Because the purpose of that testing has changed to reflect
>both ham radio in general and the global aspects
>of radio theory and individual mode usage (i.e. the
>role of CW in today's world).

I think what has really changed is simply the FCC's opinion. They don't see the
need for extensive testing anymore. Their main focus is to have an orderly
service. That's a good thing.

He, also, was required by law to meet the requirements, whether he wanted to or not; whether he did or not. (And I'm sure he did.) All hams are presumed to have met the requirements owing to the fact that they have been licensed by the FCC..

Cecil:

Here's another definition of "forced;" from the Merriam-Webster Collegiate Dictionary:

forced (adjective)

First appeared circa 1537

1 : compelled by force or necessity : INVOLUNTARY <a ~ landing>

2 : done or produced with effort, exertion, or pressure <a ~ laugh>

-- forced*ly (adverb)

Note that the first definition states that in order for something to be "forced" upon something or someone, it must be an INVOLUNTARY act. Obtaining an amateur radio license is strictly a VOLUNTARY act. Therefore, there is no way it can be "forced" upon an individual. The FCC does not send agents into the field, gather up unsuspecting citizens, and hold their families hostage at gunpoint while they study and take examinations to become licensed radio amateurs.

Your insistence that hams are "forced" to take Morse code (or any other) tests is pure bovine fecal effluvium. Enjoy the stink.

>passed the 13wpm exam a month before and he assumed that I had
>not forgotten the code over the last month.

That violated the procedure of that time. No credit was allowed back then for exam elements passed which did not result in a license or upgrade. In the mail-order-exam methods then used, if an applicant passed the code but failed the written, the whole process was supposed to start all over again. The volunteer examiner (no capitals) was not allowed to use his/her "judgement" on the matter.

Of course those rules no longer apply.

> The posting was designed
>to get your dander up and it certainly did.

Which means it might be a true story. Or it might be a tall tale, or it might be anything in between. The other people involved are probably not available to back up Cecil's story, or wouldn't remember it. I doubt very much that the FCC cares, because 5 wpm is all that's required now, and Cecil says he passed 5 wpm at an FCC office.

Note that Cecil wrote: "Here's what I said in the original". He doesn't say the story is what actually happened, only that it's what he wrote. That difference leaves him an escape hatch a mile wide.

Cecil doesn't like being called a yankee. He prefers being the yanker.

That's true Jim, and is unrelated to the question of whether a Morse code requirement is a good thing or not. Requirements are required by circumstances. The circumstances are the FCC rules. In return for certain privileges, the government forces citizens to meet the requirements. That's what governments do.

That's one definition of "forced", Larry. That is NOT the definition that I am using.

> Obtaining an amateur radio license is strictly a VOLUNTARY
> act. Therefore, there is no way it can be "forced" upon an individual.

STRAW MAN ALERT NOBODY has said that an amateur radio license is forced on ANYBODY. Please stop repeating that falsehood.

In return for granting certain privileges to citizens, the government requirements must be met. Those requirements are required by circumstances existing at the FCC. "Required by circumstances" is the dictionary definition of "forced". In return for certain privileges, the government forces citizens to meet certain requirements. That's what governments do. It doesn't matter if you feel good or bad about it. Either way, in return for the privileges granted, you are forced to meet the requirements.

> The FCC does not send agents into the field, gather up unsuspecting
> citizens, and hold their families hostage at gunpoint while they study

Why do you insist on repeating such nonsense. NOBODY has said that anything like that happens. Please stop the diversions and come back to the subject.

> Your insistence that hams are "forced" to take Morse code (or any
> other) tests is pure bovine fecal effluvium. Enjoy the stink.

Larry, you yourself, have admitted in the past that your Morse code
skill was produced only with considerable effort. "Produced with
effort" is your very own definition of "forced" above. Therefore, you
have already admitted that you were "forced" to meet the Morse
code requirements. Denying it now is ridiculous.

N2EY wrote:
> We're talking about the code test. For a test, the transmitter could be operated into a dummy load at minimum power, and the receiver operated at low gain with no antenna connected.

Nobody had a dummy load and there was no power control on the transmitter. The receiver was automatically muted during transmit. One-way transmissions were prohibited.

> AH HAH!!! So you DO agree that it was a violation!!! ;-)

Actually, I haven't told the whole story. Shorty started the Morse code exam by keying his VFO and it blew up after 16 characters. I copied those 16 characters perfectly. They were, "The Conditional Cl".

You can add to my list of "violations" when I was 14 that I played doctor
with my 12 year old sister. I still feel guilty about that one.

That's not a very pleasant manner of replying Larry... It would have
taken less effort for you to type
http://www.fcc.gov/wtb/amateur/amrenw.html and let him read and learn
for himself how it'd done.

Are you suggesting that we intentionally jam them as a mattter of
policy and/or as an acceptable and proper operating practice?
>
I've been operating on 10, yeah there are some illegals floating
around the band, mostly in the cw segment. I have yet to run into an

instance of their operations actually interfering with any of mine,
they simply are not a big problem, they're a minor annoyance at worst.
They've been doing their thing for years, if they were gonna overrun
the band they'd have done so a long time ago.
>
The topic is a helluva lot more of a "problem" in this NG than it is
on the air. As usual.

Last I checked, it was the officer that had to prove
guilt...not the defendent's job to prove not guity.

>I don't know the
>outcome of that case but most likely he mailed in his fine.
```

So be it. I wouldn't nder those circumstances.

>That way he
>doesn't have to take az day off from work to go to court, then probably
>have to pay just as much fine, or more, than if he had gone ahead and
>mailed it in. Nothin' says the judge has to stick with the published
>fine schedule if he finds reason not to....

It depends on the state and the system.

>you standing there arguing
>how innocent you are might do it.

I wouldn't argue inncoence or guilt, I'd simply not the state
had failed to suficently prove its case based on such a
minimal speed diferential. The other possibility is that
the prosecutor may not even want to pursue such a case
to avoid wasting time. Practicallity does enter the
equation when dealing with attorney's time.

Cheers,
Bill K2UNK

You never do, it seems....

>Shorty started the Morse code
>exam by keying his VFO and it blew up after 16 characters.

I thought it was a crystal-controlled Harvey Wells...

> I copied those
>16 characters perfectly. They were, "The Conditional Cl".

You needed 65 consecutive characters correct back then.

Another solution was to tune in a station sending 13 per or faster and have you copy it.

The old regs required that one pass all of the elements for a particular license in sequence with no failures. You didn't even get a glance at the written until the code was passed, too. Passing the code and failing the written for a license or upgrade that required both meant you had to start all over again. FCC examiner or by mail, it made no difference.

Of course, none of that matters at all now. 5 per is the only code test, and you passed that one at the FCC office.

--

A former Navy radioman certified at 60 wpm but with no FCC license still had to pass the code and written tests for a ham license. And if he missed the written by even one question, it was "try again in 30 days" - ALL of it. Even if he'd known the FCC examiner all his life, had a Ph.D in EE, etc., etc. Same rules for everybody.

The "requirements" may be....the fact reamins that Iw as not "forced" to do anything.

>In return for amateur radio privileges, citizens are required by
>circumstances (forced) to meet the governmental requirements. That's >what governments do.

Argue YOUR application of "forced" all you want, Cecil. All of life requires effort of one kind or another. If you consider yourself "forced", then you were forced. I have no doubt that you consider yourself victimized by a great many aspects of life, Cecil.

There are those who "do it" and those who WHINE about "doing it".

>In return for certain privileges, governments force citizens to meet the
>necessary requirements.

The purpose of government is to provide for the mutual benefit of those whom it serves. The electromagnetic spectrum is a finite and highly valuable resource.

Furthermore, it's abuse by even one person can have grossly disasterous results to countless others. That the government requires some demonstration of knowledge in order to minimize that possibility is fundamentally sound application of governmental powers.

>Dick apparently obtained his privileges through
>fraud because he says he was never required by circumstances to >pass any of the amateur radio requirements.

Fine by me as long as he was sober when he drove to the FCC office to take the test.

Light bulbs radiate RF. Someone reported a QSO on one. Doesn't seem
reasonable to violate one regulation in order to meet another one.

> >Shorty started the Morse code
> >exam by keying his VFO and it blew up after 16 characters.
>

It *was* after he blew up his VFO. He didn't want to risk blowing up his
transmitter also. There didn't seem to be any way to reduce power without
increasing dissipation in the final.

> Passing the code and failing the
> written for a license or upgrade that required both meant you had to start all
> over again.

Madisonville hams apparently issued CSCEs. ;-) For all I know, there's
a possibility that Shorty could have corrected my written exam before
he sent it in. I wasn't sure that I had passed it.

The fact remains that ***ALL*** amateur radio operators are required by circumstances (forced) to meet the requirements for an amateur radio operator's license. It doesn't matter how you felt about it. "Required by circumstances" is the dictionary definition of "forced". You were, by definition, forced to meet the requirements of an amateur radio license in return for the amateur radio privileges granted to you.

> If you consider yourself "forced",
> then you were forced. I have no doubt that you consider yourself victimized by
> a great many aspects of life, Cecil.

I'm NOT a victim, Steve. In this life, I have been lucky beyond my wildest dreams. The requirements for an amateur radio license are required by circumstances (forced) on ***ALL*** citizens who are granted amateur radio license privileges. That's just what governments do.

> The purpose of government is to provide for the mutual benefit of those
> whom it serves. The electromagnetic spectrum is a finite and highly valuable

True and therefore, amateur radio operators are required by circumstances (forced) to meet the governmental requirements in return for the amateur radio privileges granted to them. That's what governments do.

> Furthermore, it's abuse by even one person can have grossly disasterous
> results to countless others. That the government requires some demonstration

True and therefore, amateur radio operators are required by circumstances (forced) to meet the governmental requirements in return for the amateur radio privileges granted to them. That's what governments do. You are making my argument for me.

> >Dick apparently obtained his privileges through
> >fraud because he says he was never required by circumstances to >pass any of

Ahhhh, but saying that he was never required by circumstances to pass any of the amateur radio requirements means that he didn't meet those requirements. ***ALL*** amateur radio operators who received their licenses legally were required by circumstances (forced) to meet the requirements before their amateur radio privileges were granted to them. That's what governments do.

Has anyone even hinted at doing that?

>Agreed, the worst we could do to ourselves would be to take it down to
>their level. I've heard hams fire up ssb below the phone band and
>screech at freebanders, nice example of the pot calling the kettle
>black.

Did they ID? If not, how do you know they were licensed hams? No
speculation permitted -- either you can prove they were amateurs,
or you should retract that allegation. Any of them saying "This is
a ham band -- get lost," doesn't prove they themselves are licensed
amateurs.

>Personally, I ignore 'em, they don't bother me,

The same could be said of the illegals crossing the border from
Mexico; they certainly don't bother me out here in Hawaii, but
regardless, I'm all for plugging the holes in the border and even
back the landowners who conduct citizens' arrests on those criminals;
would you refer to those landowners as vigilantes?

>10m is no place for
>vigilante operations by The Righteous. If they do get in the way just
>politely run over 'em.

From what I read, that's exactly what's being done.

What difference did it make whether the county road had a license or not?

You're confusing cause and affect again, Cecil. Your statement
should instead read, "In return for amateur radio privileges,
citizens voluntarily meet the governmental requirements.

In 1976, I *voluntarily* took on a course of self-study to learn
about RF electronics, code, and the rules and regs; at any time
I could have quit -- no one forced me to continue. When I felt
ready, I *voluntarily* drove to the FCC's San Francisco office
to fill out an application; at any time I could have walked
out -- no one forced me to stay. I was then asked to proceed
into the testing room and I *voluntarily* went in; at any time
I could have walked out -- no one forced me to into that room.
Then the tests were administered; I *voluntarily* picked up
a pencil -- at any time I could have left -- no one forced to
me stay. Even after having been told that I passed, I could
have *voluntarily* left without completing the final paperwork.
At no time did I feel forced -- I *voluntarily* completed
each step of the process, and in return for my *voluntary*
cooperation, I was awarded a General class license. I never
perceived any force at any stage of the process.

Heck no!!

See K0HB's post and my reply for a half-dozen reasons why jamming is a bad idea.

Here's a worst-case scenario for ya: Coupla truckers are trying to use 28.085 and they get jammed by hams. They don't know their use is illegal - there's no license or test for cb, and they think they are in the right.

Now suppose an accident happens (say, a trailer-tire blowout that results in the load shifting) and it turns out that one trucker was trying to warn the other of the hazard, but couldn't do so because of the jamming. Suppose the accident results in fatalities, injuries and serious property damage. And suppose the FCC has tapes of the whole thing. How do you think that would play on the six oclock news?

What I'm suggesting is that if we keep those frequencies busy with amateur QSOs BEFORE the pirates ever show up, they will go elsewhere. And if we tape and report the intrusions to the FCC, there may be action taken.

But if the tapes show the pirates being jammed, the action taken may not be to our liking.

When the band is wall-to-wall with them, you may feel different. Now is the time to push them out - legally.

>They've been doing their thing for years, if they were gonna overrun
>the band they'd have done so a long time ago.

Maybe.
>>

The solution is simple, too. As usual.

>I'm NOT a victim, Steve. In this life, I have been lucky beyond my >wildest dreams. The requirements for an amateur radio license are >required by circumstances (forced) on ***ALL*** citizens who are >granted amateur radio license privileges. That's just what governments >do.

Then WHY do you insist on stressing "forced"...??? I think you ARE a victim...a victim of your own disatisfaction, ergo your need to insist that everyone is "forced", regardless of THIER perception of the circumstances.

>You are making my argument for me.

Hardly. YOU define "forced" as you will. You insist that Amateurs (therefore include me since there was no caveat to the contrary) were "forced" to do these things to become licensed.

As do all Liberterians, you dangle that spectre of "evil government" in front of everyone as if there was no government AT ALL, then we'd all be better off for it.

In a utopian world, that might be true. On THIS planet, "it ain't a happen' thing". Even in the most ancient and tribal of societies there exists some form of authortarian structure, and that structure exisits for good reason.

That you don't accept it is apparent, but that you don't accept it does not prevent it from being true.

>That's what governments do.

Thankfully in this country, for the most part, the government does what we tell it to do.

That's what PEOPLE do.

You mean like MURS? I believe the FCC at one time wanted to delicense all the personal radio services. :)

Of course that isn't really possible, given the typical conditions on
10 meters. Most of the time they won't hear any intereference at all and
hams won't hear them, when the sunspots recede again.
And there's a lot of real estate to occupy on lower 10 meters.

Light bulb in a tin can, then. Send the callsign of the station and call it a
code practice transmission. Certain one-way trqansmissions by hams ARE legal -
and they were back then, too.

Sure there was. Easy, if ya know how. Plus with a shielded dummy load, there
was no reason to.

No, my comment assumes the current CB frequencies would be reallocated for a use other then CB first (the data transmissions, for example). Since CB would no longer be legal on those frequencies (moved elsewhere), it would not be jamming.

The intent of my data transmissions example was an acknowledgement that some CB'ers will not leave those frequencies even if those frequencies were reallocated to another service. Frequency hopping, error correcting, digital data transmissions would not be bothered much by the occasional illegal CB operator still using those freqeuncies, and the noise from those transmissions would eventually push the remaining operators off those frequencies.

Now, I'm not suggesting the FCC intends to do this, nor am I specifically advocating it. I'm just presenting one possible solution to your "they AIN'T goin' just because Sam said so" comment.

I think you're being shortsighted, Brian. In my opinion, it's only a matter of time. Twenty years ago, CB radios with the capability of also operating on the 10 meter ham band were extremely rare. Ten years ago, radios with that capability were widely available (in even the smallest towns). And its only been in the last few years that a significant number of CB'ers have dared to use the 10 meter ham frequencies.

If that trend continues, in just a few more years, use of those frequencies by CB'ers will become as commonplace as the radios now with that capability. If we want to prevent that, I agree with N2EY that we have to address this problem now, before it gets out of control.

Steve Robeson wrote:
> Then WHY do you insist on stressing "forced"...???

I'm not stressing "forced". It's just happens to be the English language word that I am using. That you object to a common English word is irrelevant. Laws, rules, and regulations cannot succeed without governmental FORCE behind them.

> Hardly. YOU define "forced" as you will.

Nope, not as I will - simply as the dictionary says I should. The question is, why do you reject the dictionary definitions of words?

> As do all Liberterians, you dangle that spectre of "evil government" in
> front of everyone as if there was no government AT ALL, then we'd all be better

> off for it.

STRAW MAN ALERT I did no such thing. A couple of postings ago I said
that government was superior to anarchy. Why must you lie about what I said?
I believe any citizen should be forced to meet the requirements before being
granted the privileges. If you don't believe that then you believe that
some citizens should be granted the privileges without being forced to
meet the requirements. That's not fair, Steve.

> Even in the most ancient and tribal of societies there exists
> some form of authortarian structure, and that structure exisits for good
> reason.

That "authoritarian structure" is what FORCES citizens to obey the laws,
rules, and regulations, Steve. You are making my argument for me.

In order for citizens to obtain the privileges granted by government, they
are forced to meet the requirements for those privileges. That is indeed an
authoritarian structure and it indeed does exist for good reason. An
"authoritarian structure" cannot exist without force to back it up. Why
is that so hard for you to admit and accept?

If shooting the doves with a BB gun wasn't illegal, and you ate
the doves you shot, why would you regret it? I sure don't regret
shooting destructive crows in a cornfield with my Winchester
rifle.

Bert:

This is not amateur radio; it's Usenet. If you don't know the difference, you'd may as well turn your ham ticket also -- assuming you have one.

Amateur radio is not for technically inept idiots who "just wanna talk on the radio." It is for reasonably intelligent people who are curious, ingenious, and willing to learn and discover and their own. I think we've taken the concept of "Elmering" way too far. We're no longer pointing the way, we're now telling prospective hams which button to push and when to push it, and not holding them responsible for so much as reading a few pages out of an equipment owner's manual written in what used to be third-grade English (but now is probably college level). Our society is dumbed-down, our hobby is dumbed-down, and I, for one, am sick of it!

Anyone who can get on the internet and post a message to a Usenet newsgroup should be able to figure out how to plug a few keywords into a web browser and get back plenty of information about virtually anything concerning amateur radio. I do not apologize for my response -- I just pity that poor dumbed-down jerk, but don't see any need for him to keep up the pretense of being a licensed radio amateur.

Now Cecil is going to ask a smart-assed rhetorical question about
his Technician-class Ph. D. friend.

> You're confusing cause and affect again, Cecil. Your statement should instead read, "In return for amateur radio privileges, citizens voluntarily meet the governmental requirements.

You are still confused, Jeff. It is "cause and EFFECT", not affect.

"Affect", as a noun, means "the conscious subjective aspect of an emotion considered apart from bodily changes". Seems, when it comes to this particular subject, you are indeed suffering from an affect.

It doesn't matter how amateur radio operators feel about being forced to meet the requirements. Every citizen who is granted amateur radio privileges (effect) is forced to meet the requirements (cause) - no exceptions. The requirements are the cause. Without the requirements, citizens would not be forced to meet them. Citizens can volunteer to become CB operators. They cannot just volunteer to become amateur radio operators. They are first forced to meet the requirements (cause) for amateur radio privileges (effect).

> In 1976, I *voluntarily* took on a course of self-study to learn about RF electronics, code, and the rules and regs; at any time I could have quit -- no one forced me to continue.

If it wasn't a requirement then you are correct.

> When I felt
> ready, I *voluntarily* drove to the FCC's San Francisco office to fill out an application; at any time I could have walked out -- no one forced me to stay. I was then asked to proceed into the testing room and I *voluntarily* went in; at any time I could have walked out -- no one forced me to into that room. Then the tests were administered; I *voluntarily* picked up a pencil -- at any time I could have left -- no one forced to me stay. Even after having been told that I passed, I could have *voluntarily* left without completing the final paperwork. At no time did I feel forced -- I *voluntarily* completed each step of the process, and in return for my *voluntary* cooperation, I was awarded a General class license. I never perceived any force at any stage of the process.

Your perceptions are irrelevant, Jeff. That you didn't mind being forced to meet the requirements is irrelevant. In order to obtain amateur radio privileges, you were forced to meet the requirements for an amateur radio license. Those acts you performed were NOT OPTIONAL!!! You had no choice. If you were to become an amateur radio operator, you absolutely were forced to meet the same requirements as any other citizen. You cannot just volunteer to be an amateur radio operator. You are first forced to meet the requirements.

In exchange for certain privileges (effect), governments force their citizens to meet certain requirements (cause). That's what governments do.

I don't know, Jim. That comes awfully close to broadcasting, something that is prohibited for amateurs.

> Sure there was. Easy, if ya know how. Plus with a shielded dummy load, there

Well, if they're OK now, there's no reason they shouldn't have been OK back then. It was a victimless crime. Shorty knew that I had not forgotten Morse code in one month.

I left CB radio 19 years ago when I got my novice ticket. It felt good communicating with people that knew what they were doing and were proud of their accomplishments in getting licensed. Over the past year things have gotten shitty on the bands and operators are stupid. It sounds just like the CB I left 20 years ago except that the rig's readout is showing a ham frequency. To bad there isn't a better radio service I can go to now that the bands are full of idiots. Thanks FCC, Thanks ARRL, I'm back to 11 meters in the middle of a ham band.

Broadcasting is not prohibited for amateurs if the material broadcast is of
primary interest to the amateur radio community. Code practice and bulletins by
hams have been perfectly legal since the very beginning.

This tale gets taller with each telling.

Back in 1967, when I went to my volunteer examiner, I brought along my key and
homebrew code practice oscillator. Wasn't going to take a chance on any
unknowns.

Sure there was. Lots of reasons. Plus, that's not the issue.

>It was a victimless crime.

It was a violation of the rules of that time. The standards were lowered for you.

>Shorty knew that
>I had not forgotten Morse code in one month.

How did he know that without a valid test? You were off the air.

Sure you did. The fact that you posted this message to nine newsgroups, used a fake identification, and made numerious false statements about ham radio, clearly shows this as an attempt to stir up trouble instead of voicing an honest complaint. If you want to stir up trouble, try not being so transparent next time. Until then, you rate less than a one on the old troll-o-meter.

Who said, Larry? That may be your idea what ham radio is, but you're not the one who decides such matters (and I see no requirement in the FCC rules that says a ham must be "curious, ingenious, and willing to learn and discover on their own").

> We're no longer pointing the way, we're now
> telling prospective hams which button to
> push and when to push it, and not holding
> them responsible for so much as reading a
> few pages out of an equipment owner's
> manual written [snip]

He didn't ask about anything in his owner's manual, Larry. He asked where he could download the rules and forms to renew his license. Since he's been "inactive for quite a while," he is probably not aware that the FCC now maintains a site for ham operators, and has most of it's forms online (he is going to be really thrilled when he discovers the Universal Licensing System).

Gee, it must be frustrating to be as intellegent as you think you are, especially in a world filled with so many "dumbed-down" jerks. You sound like a bitter old man when you say crap like this, Larry. When you get in one of these moods, you need to remind yourself to climb down off that self-rightious pedestal and stop acting like a pompus ass. Because, believe me, what you're saying now says far more about your intellegence than what he said says about his.

  You need to get your meter checked, TR.  This message was way too
transparent to rate a ten.  It also lacked the style and sophistication to
be a highly rated troll.  My meter still shows it as less than a one (and
its a generious meter).

Freebanders were using 300 watt 125% plate modulated Johnson Viking
Valiant boomers and Collins 75A series rcvrs (among many others) on
the 11 & 10 meter bands back in the CB craze days of the 70s. This
crap did not start yesterday. I'd sure as hell rather have to work
thru or around one of their current weenie diode-snipped Radio Slack
ssb xcvrs than the beasts the illegals had back then.
>
> If we want to prevent that, I agree with N2EY that we have to

Have fun "addressing", you can take up my slack. The 10m illegals are
a minor annoyance, they are not a hand-wringing threat to ham radio or
even the 10m band. It's a matter of being realistic, getting 'em off
10m is entirely in the hands of the FCC and we all know where that
leaves us.

Alot of Hams are lonely cloistered nerds. They have basements
full of useless electronic junk but no nookie......NOT ANYMORE!

http://www.fuqqer.com/fotm/

Click at the above for the catalog of carefully selected hamfest women
who will be featured at the ------- radio magazine booth at Dayton 2001.

What a deal ja can't go wrong !

oh, brother, what an hysterical over reaction. on the maritime net
late last year, hams saved the life of a boy who'd been shot by
pirates off the coast of honduras. i myself contacted the coast guard
to help save the life of a heart attack victim off the bahamas...

if thats your view of ham radio, good riddance to you. get a life.

>back the landowners who conduct citizens' arrests on those criminals;
>would you refer to those landowners as vigilantes?
>
Null, void and moot. The big hole in your analogy is that INS is
aggressively enforcing the law, the FCC obviously is not. A smaller
hole begs a rhetorical response: "How does a ham make an "arrest" of
an illegal radio operator?"
>
In the meanwhile we have some self-appointed vigilantes floating
around 10m who are part of the problem, not part of the solution.
>
Until such times as the FCC acts all hams can do is moan and groan and
I'm not of a mind to waste much time noodling "solutions" to a problem
which is outside ham radio's charter and ability to solve.
>
>>10m is no place for
>>vigilante operations by The Righteous. If they do get in the way just

>
>From what I read, that's exactly what's being done.
>
In most cases yes. I suggest that you cut the academic-type pushups
and tune 10m (with a radio) and come back in here with some real-world
experience instead of coming to conclusions based on other posts.

The rules of that time were arbitrary and the standards were not
lowered for me. Shorty already had knowledge of my code ability.
I know of a number of hams who signed off on code ability based on
on-the-air QSOs performed at 13wpm or higher by novices while the
examining ham listened in.

> >Shorty knew that
> >I had not forgotten Morse code in one month.
>
> How did he know that without a valid test? You were off the air.

Shorty had heard me on the air as little as two months previously.
Milton told him that I passed 13wpm with flying colors only one
month before. No healthy person forgets Morse code in one month.
It was a victimless crime with no harm done.

Dwight:

Typical response from a pony-tailed, multi-pierced, pot-smoking liberal.
When someone emerges who supports traditional values in any form,
you call him a "self-rightious (sic) pompus (sic) ass." Tell you what --
if you're going to make a feeble attempt to debate me, can you at least
run your postings through a spell checker? I compose all of mine on
Microsoft Word '97, then paste 'em back into the AOL newsreader window.
Is that beyond your technical capability?

N2EY wrote:
> That violated the procedure of that time.

Yep, and that's why I posted it. At the time, Dick was being adamant on procedures. I wanted to yank his chain. Three years later, he's still stewing about it. :-)

The two Madisonville, TX hams were neighbors and good friends.
Milton had a 78rpm code record which he used to test my 13wpm ability.
Shorty had no way to send audible Morse code and no way to judge its speed. He asked Milton about my Morse code ability and he said I passed with flying colors. Shorty accepted the previous 78rpm record code test as being superior to any test that he could come up with.

That was 50 years ago. Both hams are SK now.

One factor which hasn't been discussed here is HF skip propagation, which often shows that apparent interference is not. Often you can hear two stations who can't hear each other. So if one can't hear a station on the frequency, he can't deliberately interfere with hi. Happens all the time, and I'm sure FCC monitoring takes it into accouont.

Dick

That's exactly what you've been saying three times a day for the last three weeks. And you've been denying saying it almost as often.

You're nothing but an ache in the posterior.

Right. But it is related to the discussion we had been having up until
now.

> Requirements are required
> by circumstances. The circumstances are the FCC rules. In return for
> certain privileges, the government forces citizens to meet the
> requirements. That's what governments do.

Thank you for explaining this to me. It comes as a real revelation.

Obtaining something by methodology of applying one's self to a task is NOT being "forced" under ANYONE'S definition.

Of course I see where Cecil is taking this, and I could respond that under such application of the definition "forced" we could also say we are "forced" to breathe, "forced" to eat ot "forced" to sleep.

The application of "forced" in those examples is ludicrous.

It took me some "effort" to overcome the 10wpm threshold too, but I was HARDLY forced to do it. I WANTED to do it in order to obtain the attached priviledges.

Absolutely TOO Liberterian, Cecil. Some common sense would be appropriate at this juncture.

Dick, please sober up enough to understand what I have been saying. Nobody forces anyone to become an amateur radio operator. But in return for granting amateur radio privileges, the government forces citizens to meet the amateur radio requirements. Therefore, anyone who has an amateur radio license was forced by the government to meet the requirements for an amateur radio license. That's what governments do.

It doesn't matter if you wanted to do it or not, Steve. The requirements are exactly the same whether you wanted to do it or not. In return for amateur radio privileges, citizens are required by circumstances (forced) to meet the governmental requirements. That's what governments do.

In return for certain privileges, governments force citizens to meet the necessary requirements. Dick apparently obtained his privileges through fraud because he says he was never required by circumstances to pass any of the amateur radio requirements.

According to Phil, Congress doesn't want the FCC to deal with them.

@news.netmar.com>, K0HB@arrl.org writes:
>Four, deliberate interference is deliberate interference --

I think the crux of this argument is understanding the government's definition of "interference." Go to www.access.gpo.gov and pull up the Code of Federal Regulations, Title 47 (Telecommunications), Chapter 1 (Federal Communications Commission), Part 2A (Terminology), Section 2.1 (Terms and Definitions). You'll see that interference can only be done to a "radiocommunication system." The question you need to pose is this: Do out-banders, operating in an illegal manner,

constitute a "radiocommunication system"? (Of course, that begs the
question of how such a system is defined; no definition in S2.1 is
given.)   73, Jeff KH6O

Hi Cecil -- I think you're subtly reversing the roles of cause and
affect. A more accurate view of this is that in exchange of a citizen
voluntarily meeting certain requirements, the government grants various
privileges; if a citizen doesn't meet said voluntary requirements,
either through choice or neglect, no privileges are issued.

Jeff:

The point that Cecil is trying to make, and won't own up to, is that
government imposed amateur radio licensing requirements are
inherently evil since they "force" people to do things that stand in
the way of their personal happiness and fulfillment. It's just another
version of the usual no-coder whine, that's all. Cecil would claim
to object to FCC licensing requirements on libertarian grounds,
but in reality, its just more whining from a person who is a moral
weakling, and an apologist for whining no-coders.

Don't you mean "cause and effect", Jeff?

Aha, the Stockholm syndrome again. It doesn't matter whether you feel
good or bad about it. If you want or need privileges that the government
grants, you are required by circumstances (forced) to meet the requirements.
That's what governments do. The goal is not to meet the requirements. The
goal is to gain the privileges. Seems you are the one who is mixing up
cause and effect. Nobody goes around "voluntarily meeting certain
requirements" without a goal in mind.

Please stop the mind-fornicating, Larry. I never, never said or implied that it was evil. Seems if you cannot deal with the truth, you choose to start telling lies and setting up straw men.

You have already admitted that your Morse code skill was produced with effort. "Produced with effort" is your dictionary's definition of "forced". The fact that you felt good about being required by circumstances (forced) to meet the requirements is irrelevant. It doesn't mater whether you felt good or bad or indifferent about it.
In return for amateur radio privileges, you were still forced to meet the requirements.

It's the old "camel's nose in the tent" thing. You give up one frequency to illegal operation, and pretty soon that one won't be adequate and they will take another. And another. Pretty soon the band will be full of them. And they will view themselves as having "squatter's rights" and will be much harder to dislodge.

Real hotbed of skilled highspeed Morse ops, that Madisonville.

>He asked Milton about my Morse code ability and he said I

>passed with flying colors.

uh-huh.

>Shorty accepted the previous 78rpm record
>code test as being superior to any test that he could come up with.

Even though it was not acceptable by FCC standards of the time.

>
>That was 50 years ago. Both hams are SK now.

So we have only your version of the story. Might be true, might be a tall tale, might be anything in between.

Doesn't matter anymore, anyway, because 5 wpm is all the FCC cares about now.

I had never seen a 33-1/3 rpm record in 1951. Milton's record player
didn't play 33-1/3 rpm or even 45 rpm. It only had one speed.

> Real hotbed of skilled highspeed Morse ops, that Madisonville.

That was before built-in side tones. Generally, the mute switch
was thrown on the receiver. I never had a sidetone until years
later. I sent code by listening to the clicks made by my hand
key and knowing which clicks were 'dit' clicks and which were
'dah' clicks. I can still send good handkey code without hearing
a side tone.

> >Shorty accepted the previous 78rpm record

Yep, and after three years, Dick is still stewing about it. :-)

I know that the ID on a REPEATER is limited to 20wpm. I also know that ID during a CW qso is not limited in speed. How about using a CW ID during a voice QSO every 10 minutes for the regs. Is there a limitation to the speed of a CW id in that instance? I can't find any reference in the regs.

thanks

The problem is the FCC isn't dealing with them and 28.085 isn't the only

frequency they are using. Truckers can be found on a number of frequencies,
28.305 is also becoming popular and I have heard them up above 28.5. Unless the
hams make it hard for them to communicate on 10 meters, they will just keep
using it in bigger numbers and you won't have those 1,695 KHz any more.

I would hold it to 20. Beyond that there may be a question of intent.
Besides what's the practical diff between taking 3 seconds at 20 or two
seconds at 30?

That's how the non-licensed MURS was carved out of the licensed
Business Radio Service, and how the upper 17 CB channels came
about.

"Make it hard" for them by using the frequencies legally, not
by throwing carriers or resorting to their own style of sleaze.

Consider the following:

Both Section 2.1 of the FCC Rules and Section 333 of the Communications Act refer to harmful interference to authorized communications.

HOWEVER, Section 97.101(d) of the Rules specifiy that no amateur radio operator may cause interference to ANY (notice that word) communications.

This difference is why lawyers get into pizza contests.

97.119 says:

(b) The call sign must be transmitted with an emission authorized for the transmitting channel in one of the following ways:

(1) By a CW emission. When keyed by an automatic device used only for identification, the speed must not exceed 20 words per minute;

I think I'd read that to mean that if you are only sending CW for identification, and you aren't keying it by hand, you need to limit it to 20 wpm. There are other ways to read it, I guess, but that seems to be the most conservative.

[After reading some other replies....]

If you can manually key your ID at 75wpm, go for it!

Remember, if your transmitter ID's for you, you don't have to. I find that convenient when working on a repeater at its site - just pick up the "god mike" (as one of my friends calls it) and talk. The machine ID's - and since that's the only transmitter, I don't have to. (Remember that when most users are using a repeater, their ID is for their HT or mobile radio's transmitter, not their repeated signal).

>communications.

And our Part 97 (S97.3) states that "harmful interference" can only
be done to a "radiocommunication service operating in accordance with
the Radio Regulations." Thus, no harmful interference is being wrought
upon the outlaw operators on 10m; they are not part of any service.

>HOWEVER, Section 97.101(d) of the Rules specifiy that no
>amateur radio operator may cause interference to ANY (notice
>that word) communications.

But are these outlaws, who are operating in an illegal manner,
conducting "communications" as legally defined by the government?
No, they are not, so S97.101(d) is not being violated.

Simple Better idea:

Move Citizens Band usuage to 380 MHZ (UHF NTIA FREQ NOW) but could be
reallocated quite simply. 12.5 khz spacing, 200 Channels with power
upto
1/20/50 watts and repeaters. License the things quite simply-You could
acquire
your licnese at your nearby friendly POST OFFICE for the princely sum of

$20.00, just fill out the form, hand over the money and your call is
the serial number on the top (w-12345678) and voila, off you go!

Everybodys happy,

Just one little detail, program the call into the radio before usuage,
license is good for 10 yrs and off you go!

Kevin:

I'm pretty sure the maximum speed for a CW ID of 20 wpm applies to
ANY automatic CW ID in ANY mode. IOW, you could *manually*
key as fast as you like, but if the ID is an automated circuit, the
maximum QRQ is 20 WPM. I'm too lazy to go thru my rulebook
this late at night, but I recall having responded to this question in the
past, and recall that the answer 20 WPM, max.

Phil Kane -- please weigh in on this issue, if you haven't already!

Nice touch! I suspect we are going to need that space soon to hold the S and T band stuff that will almost have to get removed to get TV into a neat little box. I did not use standard spacing because it made PLL fiddling too easy.

My reasoning on using 27 was to use existing antennas simply because the cab is quickly filling with other wonderous electronics. Also I am not entirely sure what a 45 foot metal box does to UHF. ANI might not be politically salable but it makes a fine concept.

I had toyed with using a D/L number with a W in front but some states exceed the digits in the national debt. Besides, why give info for free.

The whole idea hinges on whether the encroachment is in fact a product of trying to get away from skip shooting. If that is the case, then some idea along this line works; if not, kaputski.

When a university puts in a new building it has to connect it to existing paths. It can specify them and plant land mines in paths the students build outside of them or it can provide a few obvious and basic paths and then pave what the students create in a couple of years. Kind of a choice between aesthetics at great cost and a much cheaper practical if not beautiful solution.

Dick BK

Exactly.
I believe that N2EY has it right. FCC would just as soon sign them up
as hams and be done with it.

 Sounds great from a bureaucratic regulatory standpoint, but it does not
much to move all those millions of transcievers off 27-28 mz. And they
AIN'T goin' just because Sam said so.

Heck Dick, at 14, I was ignorant of the rules. If fraud was committed
it wasn't I who committed it. I'm still not sure what was done was against
the rules. I never saw and don't know the exact wording of the paper
signed by W5OLV when I passed my Conditional exam. I was ready and
willing to take another code exam like the one I had taken a month before.
Shorty just had no way to generate Morse code audio.

When I was in high school, I was also guilty of shooting doves out of
season with my BB gun. We can't all be perfect like you have been all
of your life.

Good Grief! How hard could it have been to key the oscillator with the
other transmitter stages shut off and copy the sidetone from it in the
station receiver? How did you guys 'spot' a frequency, anyway?
As Jim said, Madisonville sure wasn't a hotbed of CW activity.

> I never had a sidetone until years
> later.

I sure did, even with the old Command receiver. I used a double pole
double throw knife switch to switch the antenna from receive to
transmit. It grounded the antenna port of the receiver when on transmit,
and that gave just about the right amount of my transmitted signal for
the receive sidetone without overloading it.

What speed was that?
>
>> Real hotbed of skilled highspeed Morse ops, that Madisonville.
>
>That was before built-in side tones.

I didn't have a built-in sidetone in a rig until 1983.

>Generally, the mute switch
>was thrown on the receiver.

Not by hams who knew better.

>I never had a sidetone until years
>later.

We're talking about the code test. For a test, the transmitter could be operated into a dummy load at minimum power, and the receiver operated at low gain with no antenna connected.

>I sent code by listening to the clicks made by my hand

>key and knowing which clicks were 'dit' clicks and which were
>'dah' clicks. I can still send good handkey code without hearing
>a side tone.

I did the same for a short time, at the very beginning. Then I learned to
listen to the rise and fall of the power transformer hum.
>
My 1948 ARRL Handbook shows several lowcost methods of adding a sidetone to
almost any rig. There's the code-practice-oscillator-in-parallel-with-the-key
trick, the neon-bulb relaxation oscillator, and a few others. My favorite is to
mute the receiver by opening the grounded end of the RF gain control and
inserting another potentiometer. The added pot is shorted out on receive. It
gives a variable mute level so you can hear your own signal if the receiver is
tuned anywhere near the transmit frequency.

>> >Shorty accepted the previous 78rpm record
>> >code test as being superior to any test that he could come up with.

If he couldn't do any of the above, he wasn't qualified to give the test at
all. Accepting the previous "record test" was a violation of FCC rules. In
addition, it was possible that you memorized the record. After all, you've
often told us of your photographic memory, Cecil.
>>
>> Even though it was not acceptable by FCC standards of the time.
>
>Yep,

AH HAH!!! So you DO agree that it was a violation!!! ;-)

> and after three years, Dick is still stewing about it. :-)

I doubt he is "stewing" about anything you have to say. He's got far too much
good old Midwestern horse sense than to take seriously anything you post here.
;-)

Child's play, Dick. Slap a pile of error correcting, frequency hopping, digital data transmissions on those frequencies, and people will not be able to give away a CB radio in a few months.

So the FCC should violate their own rules by massive intentional
jamming? That won't happen. They'd be more likely to just legalize it
all first.

You obviously have a computer and can figure out how to post a
message to a newsgripe.  If you can't figure out how to find information
on how to renew your general ticket, then please don't bother!  You
don't deserve it!

Dick:

That's not the point. A regulated, licensed version of CB, on a skip-free VHF or UHF frequency allocation, would restore the utility of such a service to serious users who want to be free of the "country culture" and general mayhem of 27 MHz. LET the present day denizens of 11-meters stay there. I want to see a Personal Communications Service for motorists, truckers, and small businessmen that is everything CB was supposed to be if it wern't placed on an HF frequency allocation that propagates worldwide.

Point of order: A $20 fee for 10 years isn't enough. License fees should be enough to ensure adequate enforcement of the rules of the new service. Users should be suspended for a period of time even for comparatively minor infractions such as failure to identify on time or using "unprofessional" language on-the-air. Operating during a suspension results in losing all privileges for 3 years, minimum. Let's control this thing, and give the users a proper fear of the enforcers. CB was turned to crap because the FCC gave up on it. If we start a new service, we must not repeat this mistake, or the permanent loss of even more valuable spectrum would result.

Cecil:

I agree. I also believe that there are certain things that the federal
govermnemt simply must control for the good of all -- and finite
resources, such as the RF spectrum, is a perfect example. Therefore,
government regulation of amateur radio -- including a provision for
multi-tiered Morse code exams up to 20 WPM, makes good sense
to me. It ensures that only the people most likely to go along with
the rules and regulations get to become full-privilege operators, and
ensures that our most practical, effective, efficient, and universal
mode of non-voice communications remains available for use as a
backup to more advanced, digital modes. Of course, this logic
escapes the no-coders, who are concerned only with their personal
ease of entry into the ARS. Such a lazy and selfish attitude now
permeates our culture, to the detriment of us all.

Actually, I just remembered that shooting Doves out of season with my BB
gun was done in grammar school. I used a pellet gun while in high school.
And I've never figured out why it should ever be illegal to shoot a couple
of Doves for supper on my Dad's property. My Dad certainly liked Doves
better than Meadow Larks.

Maybe so, but I didn't read them. Shorty told me what to do and I
did it.

> As you described it, it was against the rules of the time. If it really
> happened that way, of course.

Actually, I just read those rules and the person who gave the code exam
and the person who gave the written exam didn't have to be the same
person. The person who gave the written exam didn't even have to be
a ham.

> No CW receiver? No key? No buzzer?

No buzzer and the receiver was muted during transmit. Shorty
would have had to put a one-way signal on the air which was
probably illegal. I wasn't licensed at the time.

> A tone of regret for past transgressions, perhaps?

I regret shooting doves with a BB gun but not because it was
illegal.

It was a Xtal controlled Harvey Wells. I don't think it keyed the oscillator. It might have cathode keyed the final. Wouldn't a one-way broadcast of a Morse code test session have been illegal?

This was in Santa Clara County, CA (the heart of Silly-Korn
Valley). I guess that there's really nothing new under the
sun.

Not true. I said no one is FORCED to do anything.

>What
>am I to assume from that disagreement except you think some citizens
>should NOT be forced to meet the requirements before receiving the
>privileges granted?

After you gain a working knowledge of practical American English, come back and we will revisit the issue. Until then, I think the point is moot. YOU insist that we are FORCED to do something. I contend that no one not incarcerated is FORCED to do anything.

Just as God intended, we are creatures of free will. With that comes challenges to obtaining that which we covet, whether it is food, clothing, cars or an Amateur Radio license. If you want it, meet the challenge and move on.

Those who do, will...those who don't, won't.

It's not a conspiracy..it's life.

So tell us Jim, just how can anyone on RRAP keep *anyone* out, or cause
anyone to do-or not do- anything??? Ever hear of the FCC? Seems
"keeping" is their job, not RRAP's.

Finally, a little dose of reality in the sea of "feel good" that has
surrounded ham radio for at least as long as the last R&O has been out.
I just saw on Fox News that applicants to the service academies are
down 50%. Guess a little discipline and self disclipline are too much
for too many these days. Wonder how long we can last as a nation of
pantywaists?

Isn't that disagreeing with my statement?

> YOU insist that we are FORCED to do something. I contend that no one not
> incarcerated is FORCED to do anything.

In return for privileges granted by the government, citizens are required
by circumstances to meet the requirements set by the government. "Required

by circumstances" is the dictionary definition of "forced" so amateur radio operators are, by definition, forced to meet the amateur radio requirements. That's what governments do, Steve. They enFORCE the legal requirements. Please give an example of someone who voluntarily used their free will to obtain amateur radio privileges without being required by circumstances to meet the requirements.

>   It's not a conspiracy..it's life.

Seems to me the government officials at the FCC certainly conspired to set the requirements for an amateur radio operator's license. Those requirements are predominately arbitrarily set by the FCC, not by any force of nature.

Yep. And it's the reason that there is a fine "range", say from $50 for a mailed in guilty plea to $500 for a full court hearing which is almost sure to result in a guilty finding, unless the defendent is ready and willing to fund a lengthy series of c involving lots of attorney time, expert witness fees, and all that involves. Sorta like an unwritten, unstated but no less true "You can have your day in court but don't expect to get out of paying for it". Seen it in action for many years.

Oh yes, court costs are separate and on top of whatever the fine is. Defendent pays those, too.

"Holy birdshit, Batman!", Robin exclaimed. "The FCC is now into licensing bird house occupants, and me not having my secret Morse decoder ring handy, won't be able to qualify!"

Batman mashed on his "OnStar" button in desperation, as bootleg-jammers confounded his efforts to raise RRAP act FCC fighter, Phil Kane.

Daily. It's a mess out here in the Central Pacific, having been overrun by Philippino, Malaysian, and Indonesian taxi cabs and fishing boats. Jim, KH2D, in Guam can verify that. You should come out here to see how "well" your pacifism has "worked."

>Intellectual gridlock = ON.

Now Brian, don't get abusive like Len. Your speculation would not hold up in court.

I tune in daily hoping and praying to find an open CW frequency; none exist. 10m has been completely lost to the outlaws here in the Pacific. (My 10m "real-world" experience comes from two 10m-converted CB radios, an HTX-100, and my trusty DX-60; antennas are at 100 feet just above the Ala Wai boat harbor and consist of a vertical dipole, and a horizontal dipole oriented E-W so that its lobes are N-S.)

I agree. It is also the reason that local enforcement of
CB violators won't be any sort of "high runner" with
either the local polie and/or the local prosecutors.
Too much time and effort needed to make any decent
case and to end up with what as a victory?

> Funny - my prosecutorial attitude was that I had all the time
> in the world once the defendant met the threshhold of "did he

> do it or did he not".

I find it hard to believe that no one was looking
at a bottom line cost/conviction.

How many non-productive days would your management
accept on a minor prospective violation?

Cheers,
Bill K2UNK

Court costs in NJ and NY can not be used as a punitive
"extra" against people that plead not-guilty. The court
costs for pleading guilty or not guilty here are the same
(about $25 for a speeding ticket).

> Oh yes, court costs are separate and on top of whatever the fine is.
>Defendent pays those, too.

That assumes the end result is a finding of guilty.
If the defendent wins there's no court costs at all.

Cheers,
Bill K2UNK

Jeff, are you exaggerating? It's 3pm here and I just tuned from
28.0 to 28.3. I hears eight CW signals, one carrier, and one
SSB signal.

  Depends on whether the "minor prospective violator"'s neighbors
  were peppering the office daily with phone calls or whether The
  Congressman got involved......that modulates "minor" to "major"
  in a quick hurry.  We never ran out of those cases, just folks
  to work on them.

  Someone has just got to invent a 42 hour day ... these 36 hour
  days are just not long enough....
```

I've been to traffic court a dozen times or so. I beat the charge all except one time and for that one, the judge reduced my fine by 50%. It pays to go to court. The judge, wonder of wonders, actually considers one innocent until proven guilty. He/she figures anyone sincere enough to take time off the job to appear in court just might be innocent. About 1/3 of the time, the officer who gave me the ticket didn't appear in court - automatic dismissal.

What comes to mind is the ticket I got for going 120mph in the '60s. I very carefully explained to the lady judge that the harmonics from my 10m transmitter must have affected the radar readings. When I finished, she said, "Mr. Moore, I haven't understood a word you said but I don't believe a '49 Chevrolet can go 120 miles per hour. Case dismissed!" I didn't tell her about the GMC Truck V8, Pontiac transmission, and Packard rear end that the previous owner had installed. :-)

It just appeared that after a little bit all the bickering just disappeared.
It seemed as though some one had done some house keeping.(Don't know how
don't care to either just glad they did it. My point was that this was a
nice news group to read. Some one messed it up and now some one is messing
it up again. I was politely trying to ask them to move their complaints to a
more suitable location....like not here

Yup, the IC-706 does 160 thru 70cm except for 222. If they start
messing around on the VHF FM ham bands they'll have to do it operating
simplex because I expect they'd get chased off the repeaters. That
would cramp their style pretty quick. A control operator punches the
"off" button, etc.

>
>
>> Have fun "addressing", you can take up my slack. The 10m illegals are

>> leaves us.
>
>SOL?
>

Yeah, as far as expecting the feds to do anything aboout it goes. But

the freebanders are just not a big qrm issue. Every time I've tuned
around 10m when the band is in any kind of decent shape the
ham-to-freebander population ratio is huge, 10:1, 20:1? And that's in
the cw segment. They'd get obliterated above 28.300 which is probably
why I've never heard one in the ham phone segment.
>
The way I see it the overall qrm level on 10 is Nirvana compared
compared with the qrm level on 40 for instance. If ya can deal with 40
at nite 10 is a snicker.

writes:

>N2EY wrote:
>> It was a violation of the rules of that time. The standards were lowered
>for
>> you.
>
>The rules of that time were arbitrary

"Arbitrary" is simply a word used by those who don't agree with a particular
standard. The standards of today's license testing can be called that, too.
Almost any objective standard can be called "arbitrary". For example, why is
the Technician written test 35 questions, not 34 or 36? Why is the passing
grade a certain number of right answers (27, I think)? Why are all questions
weighted the same, even though some are clearly more important for all hams to
know than others?

The rules were bent for you, Cecil, and you are trying to rationalize it because, deep down inside, you know you got a free ride.

> and the standards were not
>lowered for me.

Yes, they were. The standard of the time was that if you failed the written after passing the code, you had to take BOTH over again. No credit for a previously passed test. No judgement calls by the volunteer examiner.

> Shorty already had knowledge of my code ability.

Doesn't matter. The standard was at least one minute solid copy out of five, and NO credit for past tests. A former Navy radio operator who could copy 60 wpm on a mill still had to pass the same 13 wpm test the same way.

>I know of a number of hams who signed off on code ability based on
>on-the-air QSOs performed at 13wpm or higher by novices while the
>examining ham listened in.

Two wrongs don't make a right. If they witnessed the Novice copying a solid minute of 13 wpm, that's fine, but anything else was a violation and a lowering of standards.
>
>> >Shorty knew that
>> >I had not forgotten Morse code in one month.
>>
>> How did he know that without a valid test? You were off the air.
>
>Shorty had heard me on the air as little as two months previously.

Doesn't matter. He heard you sending. The test was for both sending and receiving. And written copywas required.

>Milton told him that I passed 13wpm with flying colors only one
>month before.

Doesn't matter. The procedure of the time was clear. Violating it lowered the standards for you.

>No healthy person forgets Morse code in one month.

How do you know? Have you tested all healthy people who know Morse code?

>It was a victimless crime with no harm done.

Not true. Others who passed the code and failed the written had to do the code again before they were allowed to try the written again. Why didn't they get credit for passing the code? I know hams who had to go back several times before they were able to pass both tests at the same sitting. Sometimes many months passed before they could get to a test session. The rules were not bent for them. They should not have been bent for you.

It's interesting to note that the original distance requirement for a Conditional was 125 miles. Then it was reduced to 75 miles (1953?) until 1963, when it was extended to 175 miles. Why did the distance change? I suspect it was due in part to rule-bending like yours.

I recall very clearly how, in the mid-70s, a rumor circulated in these parts that the FCC was going to discontinue the Conditional and require all Conditionals to retest if they wanted to stay on the air. (The Conditional was discontinued, but no retest was ever required). The uproar among Conditionals around here (there were lots of them, even though Philly has long been an exam point - that's another story) was amazing and deafening. I was mystified because I could not imagine that any ham who had passed the test would have trouble passing it again, if only to please the FCC.

73 de Jim, N2EY

My point is that no one did any cleaning... After you've been on the internet awhile, you'll see that such comes and goes.. on nearly all the ng's... I've seen posts such as yours, and a few weeks later.. same thing

starts over again..
The best thing to do (unless you can convince the persons' isp to cancel
their account or something, which I've seen happen) is to ignore it.. You
can extend the cycle by adding to it, iow.. ;)

Ha, ha! That's it. We need a standard to apply here. We're all using different meters, reading different things into the results. With the 1 through 10 meter, it could mean anything from a rating of quality to simply the presense of a troll. Since there is so much confusion with that system, lets clear up what your meter stands for now. Does the dB rating stand for the overall level of noise (if so, all meters would be pegged with the background noise on RRAM - and you thought this newsgroup was bad) or the loudness of the specific troll being read?

Maybe that meter is still pegged from a previous use.

Well, there you go again. The problem I see is that neither (reducing laws increase freedom or less government decreases taxes) is assured. Less laws could decrease the freedom of those protected by those laws, and even the smallest government can spend a lot of money.

The solution to this country's problems is not as simple as "less laws" or "less goverment." What we need are realistic laws and a responsive, financially responsible, goverment. And nothing the libertarians offer assures that (any more than the Democrats or Republicans assure it).

Larry Roll K3LT wrote:
> How could I be a criminal if I didn't meet the requirements, Logic Boy?

It is a crime to operate an amateur radio station without meeting the requirements, Larry. Those privileges are granted only after the requirements have been met. Anyone operating an amateur radio without meeting the requirements is a criminal.

> To make that statement, you'd have to ass-u-&-me that I would have
> been operating HF without the requisite license -- which I've never
> done!

That condition was assumed in my original statement.

> >Proof: US HF hams were required by circumstances (FCC regulations) to
> >pass a Morse code exam.
>
> Only if they voluntarily consent to meet this "requirement." There is
> absolutely nothing recognizable as "force" being applied to them.

It doesn't matter if they voluntarily consent or involuntarily consent. Feelings don't matter. In return for amateur radio operating privileges, all citizens are, by definition, forced to meet the requirements for an amateur radio license no matter how they feel about it.

> And the fact is, nobody was "forced" to take a Morse Code exam
> to gain HF privileges.

Yes, they were, Larry. They were, by definition, forced to pass a Morse code exam to gain HF privileges. Please provide the name of a person who gained HF amateur privileges without being required by circumstances to pass a Morse code exam. "Required by circumstances" is the dictionary definition of "forced".

I was just looking through the messages in this thread. So far, we (the people in this thread) have talked about spelling checkers, "pony-tailed, multi-pierced, pot-smoking liberals," libertarians, AOL, Goldwater, governmental oppression, "grok," road commissioners, PMS, spelling cops, grammar mistakes, newsreaders, offensive boors, Fox News, service academies, pantywaists, the Constitution, Yellowstone National Park, and still more. Heck, with the subject line of this thread in mind, I don't think anything can be off subject in this thread at this point.

By the way, I do like your "lowest common demeaner" comment above. I'll plagiarize it if given an opportunity in the future.

If the city were to handle CB radio violations, I would expect them to handle it like any neighborhood noise or dog complaint. Normally it's just a warning. But in aggravated situations, such as numerous complaints and/or complainants, the violator can be prosecuted. The cost of the prosecution is not usually a factor in such decisions. Solving the immediate neighborhood problem (and making the voters/taxpayers complaints go away) is...

Aren't you a good 4000 miles further away than he is? I can usually only
hear them in the mornings here on the West coast - all over the bottom of 40
meters.
It's a problem, fellers.

I have a friend who's knows the CB scene - he's also a ham. He says a lot
of the guys are running nice HF rigs for citizens band. Heck, they even
talk about it on the air.

> Yup, the IC-706 does 160 thru 70cm except for 222. If they start

I don't think they usually know very much about operating repeaters.
Chances of us hearing them on VHF is probably less anyway due to the shorter
range.

> When the spots are down in a few years they'll be back to talking
> across town again and it'll be over and forgotten for years. Again.

Why do you figure they wouldn't just tune to another band that does have
propagation? This is a free-for-all after all.

I think it was the History Channel's series on the American Revolution but
somewhere lately was reference to bringing von Steuben et al to teach
'sergeanting', an apparently honorable trade, to the revolutionaries.
Kind of grabbed me.

And of course "dictionary definitions are ALWAYS right? They are ALWAYS applicable regardless of the circumstances?

For someone who has repeatedly flaunted a cavalier attitude on "the law", you seem awfully adamant about sticking to this "rule" in the application of the definition of "forced".

I for one wanted to do these things to obtain an Amatuer Radio license. Many others I know did the same thing. We were not forced by anyone to do anything we did not want to do.

Ergo we were NOT forced, per your definition.

Still flogging this dead horse, Cecil? Your definition may be one
definition. My Random House College Dictionary and our massive
Webster's Unabridged downstairs don't show the definition you've
provided at all.

Nobody is forced to learn morse code.

I didn't say I supported those positions, Cecil. I was giving examples that might conflict with your comments (and I said "could decrease," not "would decrease").

Furthermore, I already answered that issue - the welfare system as it has existed conflicts with what I said in the second paragraph about a "financially responsible" government.

Furthermore, I'm not completely opposed to welfare. I think we do need some system in place to help those in real need (those with medical handicaps, etc). And I think we need a system for those who need a helping hand during a financial crisis.

Of course, like most other Americans, I'm immediately opposed to welfare benefits for those who have no real need, or endless benefits for those who refuse to do anything to help themselves out of their financial problems.

Does that answer your questions about my views on welfare?

Recently my fuel gauge on the car has been sticking.
I think that there is some moisture in the pivot or spring that is freezing
and producing this effect.
Do you know of a way of freeing it without removing the dashboard?

Not if he was doing things by the standards of the time. Resigning the

application without retesting broke the rules and lowered the standards for
you.

If it really happened that way.

Steve Robeson LPN wrote:
>   No one exercising free will is forced to do anything, Cecil.

People who exercise their free will to decide to live and work
in this country are *forced8 to pay taxes. People are *forced*

to shoulder the responsibility for their free will decisions.

In return for privileges granted by the government, citizens are
required by circumstances to meet the requirements for those
privileges. "Required by circumstances" is the dictionary definition
of "forced". Therefore, in return for privileges granted by the
government, citizens are, by definition, forced to meet the requirements.

I obviously didn't have to. The *standard* at the time was to know
Morse code. I met that standard. If the *procedure* at the time was
to retake the test, then the procedure was violated, not the standards.

Incidentally, my 1957 ARRL License Manual
does not state that the code exam must be retaken 30 days later.
Speaking of passing the code exam and failing the written exam, it
says: "If you have failed (the written exam) study some more for the
examination and after another month or so try it again". No mention
of another code exam.

Since I had already met the standards, the standards were not lowered.
It was a procedural violation, not a standards violation. I fully met
the standards of the time. Shorty was convinced that I met the standards,
I in fact did meet the standards, and he signed the paper.

A young looking person tries to buy a beer. The store owner asks him
for his ID. The young looking person is 21 so the store owner sells
him the beer. The same thing happens the next day. Have the standards
been lowered if the store owner doesn't ask for his ID the second time?
Can a person get younger as time passes? Can a healthy person who knew
Morse code 30 days ago not know Morse code today?

I find it rather odd that given the propagation characteristics of 10M when the band is open I don't hear any of that stuff here on the east coast. But never mind that, the discussions is amongst U.S. hams about freebanders which is obviously a complete waste of bandwidth if your particular problem is foreign illegals. Tell it to their consuls in Honolulu or try ITU Geneva, the FCC could care less about 'em, they're not within FCC jurisdiction.

>

ME a PACIFIST?? That's almost an insult. I'm not a pacifist, I'm a pragmatist. As in the FCC isn't going to bother with tracking down and spanking the U.S. illegals and there ain't nothin' at all U.S. hams can do about 'em either so why the discussion? It's just qrm, welcome to ham radio Good Buddy.

There's your problem, they're all CB rcvrs. Gag. Get yourself at least
one real radio with a real cw filter. Then get on 40/20m cw and get
some practice with real qrm. You'll need that practice. In a couple
three years you'll be talking to yourself on 10m when the spots drop
and all those Asians magically go away and won't be ruffling your
feathers any longer. Mother Nature will fix the illegals on 10m.

Dictionary definitions are the standard for a language.

>   I for one wanted to do these things to obtain an Amatuer Radio license.
> Many others I know did the same thing. We were not forced by anyone to do
> anything we did not want to do.

It doesn't matter if you want to do it or not. It doesn't matter how you feel about it. EVERY citizen obtaining privileges granted by the government is forced to meet the requirements for gaining those privileges. Saying nobody is forced to meet the requirements implies that some amateur radio operator somewhere decided to use his free not to meet the requirements. Where is he? What is his name?

>   Ergo we were NOT forced, per your definition.

Sorry Steve, in return for obtaining certain privileges granted by the government, citizens receiving those privileges are forced to meet the requirements enforced by the government. That's just the way it is. How you feel about those enforced requirements is irrelevant.

You can win the argument by giving us the name of just one individual who gained amateur radio privileges while using his free will to decide NOT to meet the requirements.

Seems a contradiction between your two statements above.

Actually, it measures the *future* noise-to-signal ratio on the particular thread it is attached to on RRAP. It is *forced* to do this by mandatory acceptance of intermediate tachyometric bogons through its input port. This forced acceptance also means that it is willfully in violation of the light-speed restrictions of Einstein's Special Theory *and* the Entropy provisions of the Second Law of Thermodynamics. It is tempting to try to extend this future-measurement capability to more meaningful quanitities such as stock-market indices, but the incoherency properties of RRAP noise seemingly prohibit this. However, lest someone be so inclined, be advised that all rights for such troll-o-meter applications are patent-pendingly, copyrightmently and trade-markedably owned by K7JEB Enterprises Ink.

But to demonstrate the generous nature of K7JEB, a new and vastly improved troll-o-meter is made available below for the personal and very private use of fellow hams.

```
 N9 +20 +40 +60 +80 +100 dB
                    /
                   /

Feel free Dwight! I failed to copyright the phrase (although I did
feel it was a clever turn of a phrase), it is therefore part of the
public domain... ;)

More likely it's the "sending unit" located in the tank.
Overfilling-"topping off"- the tank excessively can cause this.
Sometimes it has to be replaced to correct the problem.

Dick

I think I'm hearing the same thing everybody in the Pacific is hearing.
Foreign hams tend to be above 7.040 on phone and give callsigns.

Of course not. The freedom to rip people off should be guaranteed.
White collar crime should be decriminalized. Scam artists and con men
unite! Caveat Emptor, Carpe Diem!!

Jim,

I just listened to the Rain Report, and Riley DID pop somebody bootleggin' on 10. Didn't give any names, tho. I just hope it's the first of MANY.

A good troll gets people upset enough to respond. A great one gets complaints to various organizations and federal agencies.

I agree with everything you said. The reality is that
the cost is the factor...too many complaining citizens
is a cost an administration doesn't want. The problem
would still come down to properly gaining the right
evidence to obtain a conviction...a factor which
I don't see the typical local law enforcement
agencies doing very well.

Cheers,
Bill K2UNK

Herman has his lobes N-S according to his station description.
If that is the case, his radio illegals are either local Hawaiian,
Alaskan, Antarcticans, or around on the other side of the globe.

>>Now Brian, don't get abusive like Len. Your speculation would not

Poor Brian...I am quite a bit the pragmatist, too. :-)

Poor Jeffie, too, any time he isn't corroborated or pleased,
the "other person" has suddenly become "abusive."   :-)

>>I tune in daily hoping and praying to find an open CW frequency;

Herman must have faulty antennas or has "oriented" his
antennas in a direction not correctly stated.   :-)

On hardware, "CB receivers" should have equally good
performance to "real radios" (those used for amateur
communications). Since Herman can add to or modify those
receivers, even without a ham license, there should be no
problem making those evil "non-real-radio" receivers into
full-fledged "real radios." :-)

Maybe Herman's problems result from too much youthful
time listening to 500 KHz while in the Coasties...or maybe
he is still monitoring 500 KHz? Not stated. Odd that he
now claims 10 m experience ("looking for CW signals")
but a couple years ago was talking about "real radio"
operation "across the Pacific."

Let's see...CB has been in existance for 42 years and illegal ops
were around longer than that. Seems to be a very slow-moving
camel...

>The topic is a helluva lot more of a "problem" in this NG than it is
>on the air. As usual.

I have to agree with that. There are too many control-freaks
visible who raise their righteous swords and wave them
mightily, seeking the spectrally-pure hamaryan whatever.

It still surprises me that there is so much anger and spite over
CB after 42 years of existance...including the bundling-in of
all "illegals" (radio and otherwise) in with the evil CB types.
Tsk, tsk. :-)

Perhaps it is like an old network tagline -

"Mankind invented language to satisfy his need to complain."

:-)

Two meter repeaters are not representative of most hams - especially in any major city. Try working some two meter SSB, or better yet, spend some time on HF. You will find a completely different type of operator.

That's roughly what I hear on 10 cw during weekdays here on the east
coast. It gets much more lively on weekends. A big percentage of the
what I assume are freebanders on 10 here are ssb in Spanish. But they
might be hams who are allowed to operate ssb all the way down to
28.000.

No one has the privileges forced on him. They are voluntarily undertaken. No one is forced to learn morse code.

> That's what governments do.

That pretty well sums it up in your opinion, huh? It's a shame you wasted all those hours in Civics and Government classes.

Because you didn't meet the standards of the time.

> The *standard* at the time was to know
>Morse code. I met that standard.
```

No.

The standard of the time was to demonstrate skill in Morse code sending and receiving at 13 wpm by passing the prescribed tests, using the standards mandated by the FCC for those tests. Among those standards were things like the "at least one solid minute of legible copy out of a maximum of five minutes" standard. And the "pass it all at one go" standard.

>If the *procedure* at the time was
>to retake the test, then the procedure was violated, not the standards.

The procedures are part of the standards. If the procedure was violated, so were the standards.
>
>Incidentally, my 1957 ARRL License Manual
>does not state that the code exam must be retaken 30 days later.

The test in question was in 1954.

>Speaking of passing the code exam and failing the written exam, it
>says: "If you have failed (the written exam) study some more for the
>examination and after another month or so try it again". No mention

It says elsewhere that no credit is given for passing an element that does not result in a license or upgrade.
>

>Since I had already met the standards, the standards were not lowered.

Not true.

>It was a procedural violation, not a standards violation.

I'm not going to get involved in one of your word games.

>I fully met
>the standards of the time.

No, you did not. They were lowered for you.

> Shorty was convinced that I met the standards,
>I in fact did meet the standards, and he signed the paper.

Nope. He bent the rules.

If he was convinced that you met the standards, why did he start to give you another code test and then quit when his VFO failed? If another test was not needed, why did he start one?

>
>A young looking person tries to buy a beer. The store owner asks him
>for his ID. The young looking person is 21 so the store owner sells
>him the beer. The same thing happens the next day. Have the standards
>been lowered if the store owner doesn't ask for his ID the second time?

Not the same thing at all. Being "carded" is not a skills test.

And in many areas, sellers of alcohol must verify age at each sale if there is any doubt as to the age of the buyer. The standard of the law IS violated if that is not done.

>Can a person get younger as time passes?

In some ways, yes. Suppose the person really is under 21 but uses a phony ID the first time and gets away with it. Next time he might not be so lucky. Or the phony ID might be confiscated by police. By requiring the demonstration of age at each sale, the standard of enforcement is higher than if it is required only once.

> Can a healthy person who knew
>Morse code 30 days ago not know Morse code today?

That's not the question. The question is "can a "healthy" person who passed the prescribed Morse test one day fail it at some time in the future?" The answer is obviously YES.

The next step, Cecil, is for you to drag out the dictionary and start doing the definition wordgame thing. It's your standard procedure about now. I've got better things to do.

> AIN'T goin' just because Sam said so.

Do it over a 10 to 15 year phaseout, once Radio Shack, Wal-Mart, K-Mart
and
the others run out of stock CBs (27MHz Variety) it will be a no-brainer,
the export business will be all there is left! 15 years down the road
with
no legal CB Sales (27MHZ) will thin out the ranks and since the existing
stuff will be allowed to continue during the planned phaseout and the
common stuff will be obsolete and hard to repair, nature and time
handles

the problem and UHF CB will be the rage since many more channels would
be available.

The answer is NOT obviously yes. Please name me one person who knew Morse
code one month and didn't know it the next month - no comas, please.

If it was evil to pass a Morse code exam one month and be given credit
for it a month later, doesn't that make the whole CSCE system evil?

Dave Heil wrote:
> No one has the privileges forced on him.

Nobody said they did. So why do you need to attempt such a diversion?

Anyone who obtains the privileges has had the requirements enforced by the government. Governments force citizens to meet the necessary requirements in return for privileges granted. That's what governments do.

Don't underestimate what they might know, some of them are quite
technically competent. But I agree, I doubt that 2m would ring their

chimes, there's a lot more activity on 27Mhz and the range is a bit
better for local comms, they wouldn't gain anything by going to 6 or
2m.
>
>
>Why do you figure they wouldn't just tune to another band that does have

Apparently there already is some freeabanding on much lower freqs.
People using HF ham xcvrs on boats on the west coast are operating
somewhere around 6.5 Mhz. I undertstand it's a pretty big group.
That's a gray area. There are a bunch of 100-150w marine ssb xcvrs
available which can operate on hundreds of channels everywhere from
1.6 to 30Mhz and it's all 100% legal.
>
I doubt that freebanders would find operating in the low ham bands a
very appetizing proposition, too much qrm. They'd be better off in the
quiet holes outside the ham bands.

Sure you will, W6DKN.   Have you been to 3.860 MHz lately? The two-meter operators are not any better or worse than any other ham. I take that back, at least the two-meter operators don't usually go around promoting bigotry towards their fellow hams.

The entire 4 Mhz wide 2-meter band sounds like channel 19, Dana? Oh, come on, if you're going to post nonsense, at least try to stay somewhere in the realm of reality.

Wow, isn't technology wonderful? We can now measure the future. Perhaps with enough research, we can predict future troll patterns as reliably as we now predict the weather (it was supposed to be sunny today - it wasn't).

How do you figure that? Having realistic welfare law does not suggest less, or more, laws - just different laws that the majority would find more reasonable.

Since the city would be allowed to write the law, they could make it relatively non-technical and easy to prosecute. If the neighbors are willing to come to court and testify (as they must now do in dog barking violations), all they have to do is convince a judge beyond a reasonable doubt that the CBer is disturbing their electronic piece.

A similar situation happened to a ham recently (as discussed earlier here), and they didn't even need to make new law to take him to court.

As far as the legal equipment argument goes, the FCC can impose quiet hours on a *legal ham* now if he can't work things out with his neighbors. The city could easily make such a law to do the same thing to a CBer...

Sorry for the cross post. I will have to agree with the last post, the ham bands sounds just like the cb band. I have my extra ticket, and it makes me mad every time I listen to 2 meters, or 75 for that matter. All they say is "roger roger" before every transmission. And what all the truckers that is on 2 meters, sounds like channel 19. Braker braker 19 good buddy.

Talking about react, can we talk on channel 9 again on cb? There are some locals here in Griffin, Georgia that talk on channel 9 all the time. Can someone clear this rule up?

So, if you know where the jerks are, why waste your time there? At least they occupy a small, known piece of the band so the trash is easy to avoid - unless you're the type that likes this stuff. (Yes, I have heard about the crap on 3.860, but I have no desire to waste my time with it)

Personally I prefer to work DX and do very little stateside work (which seems to be where most of the problem operators are on HF). I work 12, 17, 20, and 40 almost every day and I have never had anything but great QSO's.

I do work VHF/UHF also, but I only do SSB or FM simplex and SATS. There are very few "garbage operators" in these modes.

At least on HF, the jerks stay in a small, relatively consistent spot and it is fairly common knowledge where they are, so they are very easy to avoid. Very different than the VHF repeaters in the big cities, where the jerks get their kicks from going from machine to machine to see what trouble they can cause (just like 11 meters).

Aaron:

As an AOL user from the very beginning, I have had to take a lot of
abuse from you whiney, never-a-life-having computer nerds just
because I have other things to do with my valuable time than to figure
out the unnecessary complexities of a piece of what is supposed to
be functonal software. Computers are supposed to simplify the
lives of their users, not further complicate them. And, I assure you,
there is nothing about any "newsreader" that I could not master -- I
would simply read the documentation and follow the instructions. I
got my introduction to newsgroups on AOL, and simply never found
any need to use a different "newsreader." I know, I know -- you were
hoping I'd hire someone like you to sit there and tell me which icons
to click. My brother does that for a living, and its good work if you
can get it -- but "real" hams and "real" computer users like me don't
need it!

Look, pal, *you're* the one who's stressed-out over the fact that I
use AOL -- not me! I don't require any "vindication" -- but I do sense
that you have a strong desire to feel superior to me based on your
choice of ISP! How immature is that?

Like you, I've heard about it, but have never listened.

> [snip] Very different than the VHF
> repeaters in the big cities, where the
> jerks get their kicks from going from

The point is that the 2-meter versus HF operator nonsense you mentioned earlier has absolutely nothing to do with it - the "jerks" are the same on both (the only difference between 2-meters and HF is the limited number of repeaters on 2-meters - harder to avoid the "jerks" if you stay mainly on the repeaters).

Therefore, you should not have said earlier that the "two meter repeaters are not representative of most hams" (you said "hams" here) and that he should "spend some time on HF" because he "will find a completely different type of operator." That is not true. There are no more "jerks" on 2 meters than on HF - they're only a little more difficult to avoid because of the limited number of repeaters.

If the "jerks" really disturb you, then I agree with your suggestion - simply avoid the repeaters. Its far easier to avoid them on the SSB frequencies (just like on HF).

Take care, W6DKN.

Lets take a survey of the number of jerks and lids out of 1000 QSO's on the
2 meter repeaters in Los Angeles, and do the same with 1000 HF QSO's on 17
meters. If you are correct, the ratios should be about the same...

> limited number of repeaters.
>

It has certainly been my experience over the last several years in/around
the Los Angeles area of So CA. Maybe in your area things are different.
But, like most people, we base our opinions on our personal experiences.

And let's not forget that my original response was to a post stating that
from listening to 2 meters, the poster concluded that ham radio in general
was just like 11 meters.

> If the "jerks" really disturb you, then I agree with your suggestion -
> simply avoid the repeaters. Its far easier to avoid them on the SSB
> frequencies (just like on HF).

They don't disturb me - in fact they have no effect on me one way or the
other - because I choose not to pay any attention to them.

If I could afford a 100KW linear I sure wouldn't be wasting time slumming in here to be worried about it.

>Dictionary definitions are the standard for a language.

For the >language< itself. However the English language is frought with multiple implied meanings to words. You have selected one particular word and stuck to it as the SOLE meaning. Pretty narrow perception.

>Saying nobody is forced to meet the requirements implies that some amateur
>radio operator somewhere decided to use his free not to meet the

I think you are into the grapes again, Cecil. This is silliness.

>Sorry Steve, in return for obtaining certain privileges granted by the
>government, citizens receiving those privileges are forced to meet the
>requirements enforced by the government. That's just the way it is. How
>you feel about those enforced requirements is irrelevant.

Yeahyeahsuresure.

>You can win the argument by giving us the name of just one individual
>who gained amateur radio privileges while using his free will to decide
>NOT to meet the requirements.

Unlike Lennie who is constantly trying to run up his imaginary "message points' and denying that he is trying to win some joust with the windmills, I have no arguement to win nor points to collect, Cecil.

I met the requirements, and was NOT forced to do it.

Define it as you will.

Sure it is. If it happens, it must be possible.

> Please name me one person who knew Morse
>code one month and didn't know it the next month - no comas, please.

The question is: "can a "healthy" person who passed the prescribed Morse test one day fail it 30 days later?"

If the answer is "no", why did the FCC require retesting the code if someone failed the written?

I know of at least one ham who went back to the FCC office back in the 1970s several times before getting his General. I will not take the chance of embarrassing him by mentioning his call or name.

He went to the FCC, passed the code and flunked the written. Went home, studied the written and ignored the code, went back to FCC a month later and flunked the code. Went home and studied the code and ignored the written. went back to the FCC, passed the code and flunked the written by a single question. Finally got both of them at the same session on the fourth try.

>If it was evil to pass a Morse code exam one month and be given credit
>for it a month later, doesn't that make the whole CSCE system evil?

Who said anything about "evil"? Not me. We were talking about lowering standards and bending rules, which was done for you (but not for everyone else) back then by a volunteer examiner.

The CSCE system changed the standards for everyone. That's a completely different thing.The CSCE system was created in part to eliminate the problem of hams like my friend who had to keep going back to the FCC for retesting of elements already passed. It also reduced the FCC's admin workload.

If the code re-test was not required back then, why did Shorty do it (until his VFO failed)?

You can prove what you are saying is true if you can produce one person with amateur radio operating privileges who changed his circumstances so he was not forced to meet the requirements for amateur radio privileges. What's his name, Steve? Exactly how did he get his amateur radio privileges without meeting the requirements?

People with amateur radio licenses had no choice except to meet the requirements. One cannot be an amateur radio operator while using his free will to ignore the requirements, rules, and regulations. "No choice" equals "required by circumstances" equals "forced".

In return for certain privileges, governments force citizens to meet the requirements for those privileges by enforcing the rules. That's what governments do.

> >

Getting a marine license for a boat is simple procedure and no
"Operators" license is required UNLESS the boat makes international
voyages or communicates with foreign flag vessels or stations. Then you
only need a "restricted Operator's" license unless you are commercial,
then an element 1 MROP (Marine Radio Operator's Permit) is required.

Even getting a coast station license isn't a big hassle anymore which allows ship to shore comms on HF and VHF freqs.

> I doubt that freebanders would find operating in the low ham bands a
> very appetizing proposition, too much qrm. They'd be better off in the

Most of the "quiet holes" are special use types such as aircraft, marine and business. Some fisherman in Louisiana decided to use an aircraft HF control freq (HF) since is was "quiet", little did they know about the duplex setup. A visit from FAA, FCC and FBI boys didn't exactly make their day when the Coast Guard rounded up the "HF Freebanders," and the riot act was read, even a local radio shop was raided and the techs given the third degree. Needless to say, a lot of ham gear came on the local market after that fiasco.

> >
> In any event they've never bothered me and even if they did there's

From reading the license manual, I'm not sure that retesting was required.
If not retesting was evil then, why isn't it evil now?

> He went to the FCC, passed the code and flunked the written. Went home, studied the written and ignored the code, went back to FCC a month later and flunked the code.

Then he obviously did not meet the standards. My 13 wpm test was 5 minutes of solid copy with no errors. I was nowhere near the failure threshold as was the guy above.

> The CSCE system changed the standards for everyone.

13wpm Morse code skill continued to be the standard for Generals so the 13wpm code standard didn't change at all. The testing procedure paperwork associated with the unchanged standards is what changed. The code standard didn't change until 2000.

> If the code re-test was not required back then, why did Shorty do it (until his VFO failed)?

That was solution number one which failed. Solution number two was to contact the ham who had given me the code exam one month before and verify that I had copied 13wpm for five minutes with zero errors. I'm not even convinced that violated the rules. Can Shaq dunk a basketball? Does he have to prove it every new day?

Steve Robeson LPN wrote:

> However the English language is frought with multiple implied meanings to words. You have selected one particular word and stuck to it as the SOLE meaning. Pretty narrow perception.

Actually, I am adopting the broad definition of "forced" while you are trying to use the narrow definition. So yours is the narrow perception. But since I made the original statement about three years ago, I got to choose the definition of the words I used.

>   I met the requirements, and was NOT forced to do it.

It doesn't matter how you feel about the requirements, Steve. All citizens who obtain amateur radio privileges are forced to meet the requirements. If that were not true, there would exist some citizens who used their free will to obtain amateur radio privileges without meeting the requirements. Who are those citizens, Steve? You remind me of Clinton. Oral sex is not sex. Enforced governmental requirements are not forced.

>

Asian-sector Antarcticans. In the case of a high dipole one will notice maybe as much as a couple s-units attenuation of those signals at most. In the case of a low dipole (<half wave) the lobes are barely lobes, the things become close to being omnidirectional.

>
>On hardware, "CB receivers" should have equally good

>communications).
>

There's no comparison between the rcvr performances of off-the-shelf CB and ham rcvrs particularly when it comes to listening to cw. The biggest difference is IF bandwidth, then they go downhill from there, front end overload, IMD, etc. What the hell, ya can buy a new Radio Slack CB xcvr for $49.99, that's the whole quality & performance story right there.

>
Back when I diddled with CB I switched between one of those clunkers
and my Collins rcvr and noted that I could only hear maybe 10% of the
signals on a given 27Mhz. freq with the Collins vs. all the "signals"
I could hear with the CB clunker. Heh.

Sorry for the confusion, Brian. I hear unlicensed stations operating on 10, 30, and 40 meters. Where the stations originate from differs on each band due to the differing propagation characteristics. Jeff mentioned that he could hear Malasian taxicabs, and Cecil didn't believe him. I jumped in and observed that Cecil was considerably further away, offering that as an explanation for why he might not expect to be able to hear them. I added that I can hear these stations in the mornings on 40 meters. That was met with the same kind of skepticism. Just because you guys can't hear it from where you are doesn't mean it doesn't exist. I'm surprised that you're unaware of this activity. It has been widely reported.

73, Jim AC6XG

Wow! Cellphone war!!!

But wait, what if the cellphone user is aware of the jamming and just blast
out their ringtone anyway?,
Or turn the volume up high and keys morse code messages using the keypad...

How does the person with the cellphone jammer know for sure that the jammer
is only jamming frequencies only used by cellphones?

Ditto. I work in an Emergency Department and I can't believe the IDIOTS who will call 9-1-1 for a ride to the ER, then yakkity-yak on thier cellphones.

Some frickin' emergency.

That thought had not eluded me, however the gauge remains pegged when the
ignition is switched off and thus power is removed from the instrumentation.

Thank you for you response.

Any idiot that doesn't have sense enough to turn their cell phone off in a theater doesn't have enough brains to know Morse code.

You know and I know that we are speaking in context about U.S. amateur
radio operators licensed by the FCC. That you must resort to a foreign
king to produce the requested person must mean that you don't know an
amateur radio operator in the U.S. who changed his circumstances so he
was not forced to meet the requirements for amateur radio privileges.

I accept all the wide ranging definitions of "forced", Steve. You do not. That means your acceptable range of definitions is more narrow than mine. Your narrow minded non-acceptance of a valid Webster's dictionary definition is what the argument is all about. If you don't accept the dictionary definitions of words, rational communication is impossible.

> >It doesn't matter how you feel about the requirements, Steve.
>
> Sure it does.

As far as meeting the requirements, it doesn't matter how you feel about the them. You may love them or you may hate them. You are still forced to meet the same requirements as everyone else. Anything short of meeting those requirements is fraud.

> >All citizens who obtain amateur radio privileges are forced to meet the
> requirements.
>
> I wasn't forced to do anything Cecil.

The best you can say is, "I didn't mind being forced to meet the requirements."

The requirements are enFORCED by the government. That's why you met them. You wouldn't have met them if they had not been governmental requirements. Therefore, by definition, you were forced to meet the same requirements as everyone else who were granted the same privileges as you. Those requirements are enforced no matter how anyone feels about it. The only way to keep from being forced to meet the same requirements for amateur radio privileges as everyone else is to engage in fraud.

When you say, I wasn't forced to meet the requirements, you are essentially admitting that you didn't meet the requirements, since the government enFORCES those requirements that you were not forced to meet.

> >If that were not true, there would exist some citizens who used their
> >free will to obtain amateur radio privileges without meeting the
> >requirements.
>
> "Meeting the requirements" and being "forced" are not synonomous.

When those requirements are enFORCED by the government, they are, by definition, synonomous. That you feel otherwise is irrelevant. Feelings don't matter.

Requirements enforced by the government in return for granted privileges are required by circumstances and therefore, by definition, citizens who are granted those privileges are forced to meet those requirements. NO EXCEPTIONS!!!

That you use "more" instead of "most" implies that you believe that
there are only two "prolific authors on this subject." Who's the
other one? :-)

It is not a diversion. If one can't be forced to obtain a license, one cannot be forced to learn morse code. You seem to have trouble with more than one idea linked to another.

> Anyone who obtains the privileges has had the requirements
> enforced by the government. Governments force citizens to

> granted. That's what governments do.

My original statement was: No one is forced to learn morse code.

Neither government or individuals force anyone to learn morse code. My neighbor has never had anyone from the government show up to force him to learn it. His son lives across the road. No feds have arrived to force him to learn morse either. Neither cares a whit for amateur radio. I'm certain that they'd be keen to learn it on their own if they ever developed any interest in amateur radio.

Your insight into the work of government is nothing short of remarkable.

Damn, Cecil, I think you've been bested at your own word game. You certainly used the term "governments" in the plural and didn't specify the U.S. government. You used the all inclusive term.

It surely is peculiar that my unabridged dictionary doesn't use your "required by circumstances" term at all in any of the meanings listed for the word "forced". Despite that, until the day that HF amateur radio licenses in the U.S. become mandatory, no one is forced to learn morse code.

Well, governments do set requirements for privileges granted. That a king can violate his own laws is nothing new. The United States, OTOH, is a nation of laws, not of men who may be king. Your feeble attempt at a diversion is duely noted. Please name one US citizen who is capable of using his free will (like a king) to violate the requirements for a US amateur radio license. Are you implying that is what you did?

> It surely is peculiar that my unabridged dictionary doesn't use your "required by circumstances" term at all in any of the meanings listed for the word "forced". Despite that, until the day that HF amateur radio licenses in the U.S. become mandatory, no one is forced to learn morse code.

Morse code ***IS*** mandatory for US HF hams, Dave. Therefore, US HF Amateur Radio Operators are forced to learn Morse code. Else they wouldn't be HF Amateur Radio Operators, would they? How you can build such a contradiction directly into your argument is beyond belief.

Once a citizen of the US commits himself to becoming an HF ham, to succeed he has absolutely no choice. He is forced to pass a Morse code examination as part of the requirements enFORCED by the US government. If you did not submit to the enFORCED requirements, then you must have received your license through some sort of fraud.

The FCC enFORCES the US amateur radio requirements. Therefore, US hams are forced to meet the requirements. There is simply no other choice. That you enjoy being forced to meet the requirements is irrelevant as are ALL feelings where rigid governmental requirements are concerned. Nobody cares how you felt about being forced to meet the requirements. That you didn't feel forced is irrelevant. Try using your free will not to meet the requirements and see what happens to your privileges.

Everything else being equal, it is not possible to ace a chemistry test one day and fail the same test the next day.

Everything else being equal, it is not possible to copy five minutes of 13wpm perfectly one month and fail to copy one minute of 13wpm the next month.

That's an absolutely ridiculous statement. Of course, one can be forced
to learn Morse code in order to obtain an HF ham license. The license grants
privileges. The Morse code is part of the requirement for those privileges.
The requirements are enFORCED by the government. US HF amateur radio
operators are, by definition, forced to pass a Morse code test. The US
government enFORCES the Morse code requirement for HF hams. Exactly
how has any HF ham circumnavigated that requirement?

> My original statement was: No one is forced to learn morse code.

All HF amateur radio operators who didn't already know Morse code were forced to learn Morse code. Otherwise, they wouldn't be HF amateur radio operators. How that simple logic escapes you is beyond belief.

> Neither government or individuals force anyone to learn morse code.

All HF amateur radio operators who didn't already know Morse code were forced to learn Morse code in order to obtain their HF privileges. The government forces citizens to meet requirements in return for privileges granted. Why is that concept so hard for you to understand?

> My neighbor has never had anyone from the government show up to force
> him to learn it.

Is he an HF amateur radio operator? If so, he was forced, by the government, to pass a Morse code test. If he used his free will not to learn Morse code, then he is either not an HF ham or he obtained his HF ham license fraudulently.

> His son lives across the road. No feds have arrived
> to force him to learn morse either. Neither cares a whit for amateur
> radio.

Well, there's your answer. It is true that nobody is forced to become an amateur radio operator. But all HF amateur radio operators are forced to pass a Morse code test. If that is not true, where are the HF hams who used their free will not to pass a Morse code exam. Please produce a list of HF hams who chose not to meet the Morse code requirement.

yodoc@aol.comnospam (Larry Roll K3LT) wrote:

>As an AOL user from the very beginning, I have had to take a lot of
>abuse from you whiney, never-a-life-having computer nerds

Analogy: Prospective hams who never want to use CW have to take a lot of abuse from (your words:) "whiney, never-a-life-having" hams who insist on a code test...

Personal response: Thanks for the compliment, but I wouldn't consider myself a computer nerd. This newsreader that I use (Agent) is very easy to use and took about a 2 hour learning curve.

>because I have other things to do with my valuable time than to figure
>out the unnecessary complexities of a piece of what is supposed to
>be functonal software.

Translation: I'm whining that if I don't need to use a *real* newsreader, why should I have to learn this new skill...

Analogy: If prospective hams don't want to use CW why should they have to learn the code...

Personal response: A *real* newsreader allows you to sample many news servers, not just your own ISP's and not just Usenet. Many ISP Usenet servers don't even carry all the Usenet newsgroups. With a *real* newsreader you are not locked in to one Usenet server. And many non-Usenet servers also carry many interesting groups unavailable to you. You are missing as much newsreading by your lack of this computer skill as a ham is missing on the ham bands with his lack of a code skill...

> I assure you, there is nothing about any "newsreader" that I could not master

I have no doubt that you could master any newsreader. And I have no doubt that just about anybody could master the code...

>but "real" hams and "real" computer users like me don't need it!

I dunno Larry, you sure sound like one of those whiney, knuckle dragging, never-a-life-having, non-real hams griping about having to learn a new skill that they don't think they want or need...   :-)

Get it together, Cecil: everything's NOT equal---it's one minute of 13 wpm one month versus one minute of 13 wpm in another, etc. Not one versus five, or perfectly now, less than perfect later. Apples vs. apples, not apples vs. hamburgers. So much for bullwhip.

*Jerks* like an audience. That's why you will more likely find them on
a repeater or a known HF garbage frequency, rather than on a simplex
HF or VHF frequency. That's why there are more ham jerks on the ham
newsgroups, present company excepted of course...   :-)

No, actually that happened well before. But somehow only the fervent
code haters who glommed a Welfare Extra post-April 15 are so predictibly
rabid crditics of anyone who supports any sort of cofde testing for a HF
ham license. If you want to see one look no further than your own
mirror.

Another good reason to keep up your CW skills. Once you get past the rubber
stamp contacts on CW, there are some really good conversations and very seldom
any jerks. 73, AK

"Pay-to-Pay" (e-file) is not the smart way.
If only IRS were really a "service" !   AK

>that I can hear these stations in the mornings on 40 meters. That was met
>with the same kind of skepticism.
>

Not so much a case of skepticism on my part I'm just surprised that we
don't hear asian illegals on 10m at least once in awhile. JAs boom
here on 10 as do VKs & ZLs when the band is open in those directions.
Not hearing illegals on 30 & 40 from the east coast is not a surprise
at all. Last nite I worked a French station running 3 watts on 40, no
big deal from here but that would be a real stunt for you.

>
>Just because you guys can't hear it from
>where you are doesn't mean it doesn't exist.
>

Agreed. I've operated from Europe, whole different ballgame as far as
what you can hear from there vs. what you can hear on this side of
that pond on 20 & 40.

I haven't been on the water for years and I never did get into MF/HF
marine radio so I don't have much of a grip on the details beyond the
fact that the radios are out there, there are a flock of frequencies
and ya better have one aboard if ya get very far offshore.
>
>Even getting a coast station license isn't a big hassle anymore which

That was not the case back when I had a Ray Jeff VHF radio aboard the
family boat. Only marinas and the CG were allowed to have shore-based
VHF stations. Predicatably that law was busted all over the country, I
guess they gave up and made it legal at some point.

Fundamental law: only the FCC has jurisdiction in electronic interference cases, whether the station is in compliance with FCC rules or not - a local/state or Federal court cannot enjoin operation nor impose penalties in a suit brought by alleged "victims". The only court action that can result in such a situation would be an FCC application in Federal court to get judicial enforcement of its order against a recalcitrant non-complying station/operator. State and local courts are out of that loop.

The adoption of the Feingold Bill did not change that. Under that Bill, the only authority that the "locals" have is to enforce FCC power, frequency, and equipment compliance standards, and they had better have an experienced communications engineer or technician who is qualified in enforcement measurements making those determinations or they will be shot down by any decent defense lawyer.

>A similar situation happened to a ham recently (as discussed earlier
>here), and they didn't even need to make new law to take him to court.

IIRC "they" lost on jurisdictional grounds. Another fundamental of the law: one cannot be found to be a public or private nuisance for doing an action for which one has a license (expressed or implied) granted "in the public interest, convenience, or necessity".

>As far as the legal equipment argument goes, the FCC can impose quiet
>hours on a *legal ham* now if he can't work things out with his
>neighbors.

This is done only when the extrinsic symptoms make it evident that the station is clearly in violation and then they are imposed only until the FCC can get a crew out there to make technical measurments.

>The city could easily make such a law to do the same thing to a CBer...

Not so, my friend. "Locals" have no authority to regulate time
and place of operation, only compliance with FCC frequency,
power and equipment compliance standards.

Much as I oppose(d) the Feingold Bill, it was clear that it did
not give the "locals" any authority to make or enforce "rules"
that were more stringent than the FCC rules or were concerning
any facet of CB operation other than enforcing the rules on
frequency, power, or equipment compliance. My gripe was that
it was bad policy to have anyone enforcing FCC rules EXCEPT the
FCC.

Try reading the 1954 version with an open mind. It was required back then. It
was required right up until CSCEs were authorized.

>If not retesting was evil then, why isn't it evil now?

Who is talking about "evil"? Not me.
>

>Then he obviously did not meet the standards.

Exactly - because the standard was to pass BOTH tests at the same session. By saying "Then he obviously did not meet the standards" you agree that part of the standard of the time was to not get credit for a previously-passed element.

If the examiner had given him credit for passing the code when he went back the second time, he would have passed the written. But that's not how it worked back then.

> My 13 wpm test was 5 minutes
>of solid copy with no errors.

That's very good. But it doesn't mean you get a "get out of test free" card.

> I was nowhere near the failure threshold as
>was the guy above.

Doesn't matter. The challenge was to come up with an example of someone who passed the test, then flunked it a month later. I did so.
>
>> The CSCE system changed the standards for everyone.
>
>13wpm Morse code skill continued to be the standard for Generals so the
>13wpm code standard didn't change at all.

Yes, it did. The speed was the only thing that didn't change.

>The testing procedure paperwork
>associated with the unchanged standards is what changed. The code standard
>didn't change until 2000.

Not true at all.

At one time, the ONLY way for non-disabled persons to pass the code receiving test was to present the examiner with at least one solid minute of legible copy out of five. No time was allowed to go back and fix errors or blanks. When the code stopped, it was pencil DOWN and the examiner took the paper away.

Then the options of fill-in-the-blank and multiple-choice code tests were added, along with the 1-minute-out-of-5 rule. The sending test was "waived" too. Many VEs now allow time to go back and fix errors. The standards changed greatly, and long before 2000.
>
>> If the code re-test was not required back then, why did Shorty do it (until

If he didn't think it was needed, why did he bother at all?

>Solution number two was to
>contact the ham who had given me the code exam one month before and
>verify that I had copied 13wpm for five minutes with zero errors.

Which he could have done before, if it were legal. But it wasn't. He bent the rules for you.

> I'm
>not even convinced that violated the rules.

He did. But I doubt very much you will ever admit that.

>Can Shaq dunk a basketball?

I don't know. I don't watch basketball much. I prefer to participate rather than spectate.

>Does he have to prove it every new day?

All athletes have to "prove it" every new day. That's what sports is all about. Why play the game if we know what the players can do?

>lobes, the things become close to being omnidirectional.

Might be SOME very low dipoles that way, senor, but you can't say
that they all are. Firstly, remember that Herman said his antennas
were 100 feet up. That's easy 3 wavelengths at 10 m. Secondly,
the way to get omvi patterns is to use two half-wave long whips at
90 degrees (aircraft VHF radios sometimes use those...omni at
horizontal polarization.

Low dipoles over good conductors (sea water is fairly good) will
have lobes pointing UP. That may be good for NVIS, but not for
long-haul HF skip. Dipoles at a three-lambda height get very
classical in patterns.

I'm still wondering what happened to the Herman "wire beam" that
was slung between buildings. [described in here around 3 years
(or yarns) ago...]

>There's no comparison between the rcvr performances of off-the-shelf

As I said, senor, hams are allowed to take anything and rebuild it
and, if a transmitter that performs within tech specs of Part 97,
transmit with it. If you want straight-from-the-box rigs, then low
cost equals low performance whether its a dedicated-to-ham-use
radio or the evil, no-good, clunky CB (adjectives added to please
all the CB haters out there).   :-)

>Back when I diddled with CB I switched between one of those clunkers
>and my Collins rcvr and noted that I could only hear maybe 10% of the

Military Collins receiving equipment is not noted for sensitivity.
The venerable R-390 to R-392 best HF sensitivity is specced
at 3 microvolts for 10 db S:S+N. It's in the book. Modern AM

(voice-channel bandwidth) receivers for HF can do about an average of 0.8 microvolts, less than 0.5 microvolts on SSB.

```

Translation: "I couldn't get it to work as I thought it should work (without reading the instructions) so I used only as much as I could understand..."

AOL v 5.0 has a built-in spell checker, free, part of the package.
No need to use another text editor. In reality, AOL software is
intuitively friendly with many features for many kinds of e-mail
and other communications.

>Computers are supposed to simplify the
>lives of their users, not further complicate them. And, I assure you,
>there is nothing about any "newsreader" that I could not master -- I
>would simply read the documentation and follow the instructions.

Then why not use what you get free?

>I got my introduction to newsgroups on AOL, and simply never found
>any need to use a different "newsreader."

Then why do you go off AOL software to Word because it has a
spell checker? AOL software for e-mail has a spell checker.

>I know, I know -- you were
>hoping I'd hire someone like you to sit there and tell me which icons
>to click.

AOL has help screens to tell you, also provided free.

>My brother does that for a living, and its good work if you
>can get it -- but "real" hams and "real" computer users like me don't
>need it!

You are a legend in your own mind, tRoll.

yodoc@aol.comnospam (Larry Roll K3LT) wrote:
>Here's another definition of "forced;" from the Merriam-Webster Collegiate

In the spirit of keeping this thing going,
 here is what the American Heritage Dictionary has:

forced (f�rst, f �rst) adj. 1. Imposed by force; involuntary: was condemned to a life of forced labor; a plane that made a forced landing. 2. Produced under strain; not spontaneous: forced laughter. See note at forceful .
 force (f�rs, f �rs) n. 1. The capacity to do work or cause physical change; energy, strength, or active power: the force of an explosion. 2. a. Power made operative against resistance; exertion: use force in driving a nail. b. The use of physical power or violence to compel or restrain: a confession obtained by force. 3. a. Intellectual power or vigor, especially as conveyed in writing or speech. b. Moral strength. c. A capacity for affecting the mind or behavior; efficacy: the force of logical argumentation. d. One that possesses such capacity: the forces of evil. 4. a. A body of persons or other resources organized or available for a certain purpose: a large labor force. b. A person or group capable of influential action: a retired senator who is still a force in national politics. 5. a. Military strength. b. The entire military strength, as of a nation. c. Units of a nation's military personnel, especially those deployed into combat: Our forces have at last engaged the enemy. 6. Law Legal validity. 7. Physics A vector quantity that tends to produce an acceleration of a body in the direction of its application. v. tr. forced forc�ing forc�es 1. To compel through pressure or necessity: I forced myself to practice daily. He was forced to take a second job. 2. a. To gain by the use of force or coercion: force a confession. b. To move or effect against resistance or inertia: forced my foot into the shoe. c. To inflict or impose relentlessly: He forced his ideas upon the group. 3. a. To put undue strain on: She forced her voice despite being hoarse. b. To increase or accelerate (a pace, for example) to the maximum. c. To produce with effort and against one's will: force a laugh in spite of pain. d. To use (language) with obvious lack of ease and naturalness. 4. a. To move, open, or clear by force: forced our way through the crowd. b. To break down or open by force: force a lock. 5. To rape. 6. Botany To cause to grow or mature by artificially accelerating normal processes. 7. Baseball a. To put (a runner) out on a force play. b. To allow (a run) to be scored by walking a batter when the bases are loaded. 8. Games To cause an opponent to play (a particular card). Idioms: force (someone's) hand 1. To force to act or speak prematurely or unwillingly. in force 1. In full strength; in large numbers:

Demonstrators were out in force. 2. In effect; operative: a rule that is no longer in force. [Middle English from Old French from Medieval Latin fortia from neuter pl. of Latin fortis strong; See bhergh- 2 in Indo-European Roots.] force �a�ble adj. forc �er n.
Synonyms: force compel coerce constrain oblige obligate These verbs mean to cause a person or thing to follow a prescribed or dictated course. Force, the most general, usually implies the exertion of strength, especially physical power, or the operation of circumstances that permit no alternative to compliance: Tear gas forced the fugitives out of their hiding place. Lack of funds will eventually force him to look for work. Compel is often interchangeable with force, but it applies especially to an act dictated by one in authority: Say nothing unless you're compelled to. His playing compels respect, if not enthusiasm. Coerce invariably implies the use of strength or harsh measures in securing compliance: � The way in which the man of genius rules is by persuading an efficient minority to coerce an indifferent and self-indulgent majority � (James Fitzjames Stephen). Constrain suggests that one is bound to a course of action by physical or moral means or by the operation of compelling circumstances: � I am your anointed Queen. I will never be by violence constrained to do anything � (Elizabeth I). Oblige is applicable when compliance is brought about by the operation of authority, necessity, or moral or ethical considerations: � Work consists of whatever a body is obliged to do � (Mark Twain). Obligate applies when force is exerted by the terms of a legal contract or promise or by the dictates of one's conscience or sense of propriety: I am obligated to repay the loan. strength

My misunderstanding. Thanks for the correction.

> and they had better have an experienced communications engineer
> or technician who is qualified in enforcement measurements
> making those determinations or they will be shot down by any
> decent defense lawyer.

Under those circumstances I doubt that any of the cities in my area
will get involved...

> This [quiet hours] is done only when the extrinsic symptoms make it evident
> that the station is clearly in violation and then they are
> imposed only until the FCC can get a crew out there to make
> technical measurments.

That may be the FCC practice, I'll certainly defer to your experience
on the matter. However that doesn't appear to be what the regulations
say. In fact part (a) might be an easy way for some local law
enforcement of quiet hours using existing FCC regulations, with little
technical expertise needed. BTW- Those weird quiet hours must have
been selected in the 30's... :-)

Sec. 97.121 Restricted operation.

(a) If the operation of an amateur station causes general interference to the reception of transmissions from stations operating in the domestic broadcast service when receivers of good engineering design, including adequate selectivity characteristics, are used to receive such transmissions, and this fact is made known to the amateur station licensee, the amateur station shall not be operated during the hours from 8 p.m. to 10:30 p.m., local time, and on Sunday for the additional period from 10:30 a.m. until 1 p.m., local time, upon the frequency or frequencies used when the interference is created.

(b) In general, such steps as may be necessary to minimize interference to stations operating in other services may be required after investigation by the FCC.

Phil,

I hear on the Rain Report that Riley nailed somebody for bootlegging on 10 meters--in his own words. Didn't say who, but maybe the ARRL letter will clue us in later. I just hope this is the beginning of many, many more busts. I *can* hope, can't I?

Jerry

Okay, I guess that makes sense. I'm not a lawyer, so you have to include things like this in your explinations.

>> Wouldn't the operation of a station causing
>> interference be an "unauthorized operation?"
>
> No. A 4-watt CB transmitter [snip]

> equipment tests to determine that the equipment
> is non-compliant.

If I understand you correctly, you're saying that the local cop cannot possibly inspect a station based solely on an interference complaint - the local would first need evidence that the the equipment is illegal. If that is so, then HR-2346 would be absolutely useless - it does nothing because the only way a local is going to become aware of a situation is when an interference complaint is made, but then they cannot do anything about that complaint because they have no proof that the equipment is illegal. That just doesn't make sense. Something has to be missing (and I think I know what it is - see below).

>> If so, wouldn't this paragraph cover electronic

> delegated to the "locals".

Isn't there a rule that requires an operator to make his station available for inspection upon request? If so, and if the local cop is operating under delegated authority of the FCC to enforce HR-2346, wouldn't this allow the local to inspect a station when an interference complaint is received in order to determine if the equipment is non-compliant?

EXACTLY correct, sometimes people should check what their saying before putting it down in print. I was on a couple of 2 meter repeaters in the 60's. In 1967, I was on the tech committee for one, over 100 active members on that one alone, so there was lots of activity prior to the no code folks. Certainly has dwindled down last 5 yrs or so and I would think the Internet is the biggest factor, but could be wrong

Well, smarty, what happens when so much TiH4O collects at the center of
the Earth that it achieves critical density. Isn't that how the Sun was
created, and why it has a white glow?

```

About twenty-eight years ago on August 4th, 1972, the Ap index hit 223,the ionosphere was bombarded with all sorts of solar particles with hard-to-pronounce names, and amateur radio was at it's peak. It has never been that good since.

Also, on that same date, titanium dioxide was first released in a commercial product. It has led inexoribly to the decline of amateur radio as we know it. Titanium dioxide is directly responsible for the decline of the Ap index, and the resultant decline of amateur radio.

It has also led to a horrible decline in well tanned girl torsos at the beaches of the world.

In the late 60's a group of induhviduals who were rankled by the advent of incentive licensing looked for a way to ruin propagation and thus amateur radio forever. Since propagation depends on a solar component known as freckles-del-sol (better known as sunspots), a means of stopping sunspots would destroy would destroy amateur radio.

The group discovered the sun-blocking power of a natural chemical called titanium dioxide, but they needed a way to deploy a thin mist of the chemical into the upper reaches of the earths atmosphere. Since it could be dispersed by evaporation, these diabolocal fiends found the perfect means of sending it skyward.

First they quietly obtained virtually the entire world supply of titanium dioxide, and then they started a rumor in the medical world that the tanning rays of the sun could actually be harmful. Incredibly, in 1972, people would believe anything.

Literally millions of bikini clad ladies, even on Gilligans island, were panicked! After all, it was August, the height of the swimsuit season, and most of them had not nearly amortized their investment in the latest Jantzen bikini, or partial bikini. What could they do?

Meanwhile, the titanium dioxide Cartel had formulated a mixture of their chemical and coconut oil and put it on the market as not only a sun-blocker, but also a means of replenishing critical skin oils depleted by exposure to the sun.

Millions of bikini-owners flocked to purchase the new sun blocker, spread it lavishly on their bodies, and returned to the world beaches. Little did they know the horrible ravages they were inflicting on the E and F layers of the ionosphere, as the gruesome chemical evaporated from their skin and rose into the skies of the world, from whence it ruins propagation on a global scale.

Hams, UNITE! Help take back the ionosphere! Be part of the solution, not part of the problem. Visit your local beaches today and check the skin of everyone for traces of this harmful solution. It can be easily detected by it's characteristic coconut smell, and even small concentrations are dangerous. Carefully sniff all bodies on the beaches for traces of this chemical. If detected, throw the offending person in the water to dilute the effects, and burn on the spot any garments known to be contaminated.

Save amateur radio....

.....to the beaches, now!

It is possible for them to do what the FCC does (they wanna play, they gotta follow the rules of the game) - make external measurements of frequency and an estimate of apparent power for "probable cause" purposes, but this takes an experienced and qualified observer, df equipment, calibrated counters/receivers, and field strength equipment with calibrated antennas -- and a knowledge of what and how to apply all the "fudge factors" in the operator's favor when making those measurements.

>Isn't there a rule that requires an operator to make his station available
>for inspection upon request?

These is a section of the Comm Act (303(n)) that gives the *FCC* authority to require that an operator make the station and its equipment available for inspection, and failure to do do can result in criminal and administrative penalties under Sections 501, 502, and 503 of the Comm Act. None of these procedural powers were delegated to the locals.

>If so, and if the local cop is operating under
>delegated authority of the FCC to enforce HR-2346, wouldn't this allow the
>local to inspect a station when an interference complaint is received in
>order to determine if the equipment is non-compliant?

The way that the locals will make the vast majority of inspections is "by request" just like they do for other things....fear of the police operates then. If they can get admitted into the house legally, equipment in "plain sight" becomes available for inspection if they have reasonable cause to suspect a violation. Interference with HEEE is not "reasonable cause".

Wouldn't the titanium dioxide just float on top of the ocean and
"evaporate" anyway? ;-)

I'm just developing a yen to try that game, been reading about it and
antenna modeling is very similar to modeling structures which I do
know something about. Garbage in = Garbage out. Real-world antenna
modeling involves a lot more imponderables than structural modeling.
How does one model the effects trees have on atennas when one strings
a wire thru seven of 'em? The answer is ya don't bother.

The current crop of tuna-tin rcvrs are pretty sophisticated little
suckers, they work surprisingly well. Damned sight better than the
regens and low-cost Hallicrafters stuff I had back when I got into the
game. Does not apply to $49.99 CB xcvrs.
>
>>That's correct and that's why there are no $49.99 ham xcvrs out there.
>
>I thought MFJ had a kit a few years ago? (no old MFJ catalogs here)
>:-)
You're absolutely correct and I gotta retract that comment with
respect to "there are *no* $49.99 ham xcvrs out there". There are qrp
kits out there for under $50.
>
The least expensive plug 'n play HF ham xcvr out there that I know
about is the lame 25w Radio Slack HTX-100 10m single-bander which
sells for $149.99. Slightly factory boogered CB ssb xcvr with a key
jack, basically.
>
The current MFJ qrp xcvr kits are out there for $190 a pop per band
and Ten-Tec offers similar kits for about $100.
>
>All second-sourced military equipment is identical. I wasn't aware
>that Motorola also produced the '390 series

>
390 types came from everywhere. Collins built only 1,281 out of the
54,276 390/390As produced between 1950 and 1986. Motorola delivered
14,324, Electronic Assistance Corp. built 10,717, buncha others like
Stewart -Warner, Teledyne and a flock of no-names did the rest.
Hammarlund built 118 ham/swl/commercial versions.
>
DoD bitched mightily about the cost of the original 1950 390 so
Collins went back to the drawing board in 1951 and came up with the
1951 390A design which is a scaled-back cost reduced version of the
original 390. 26 vs. 32 tubes, etc. The A model is by far the more
common version and is supposedly a better performer than the 390.
>
> but there is a story
>about a cosmetics firm that tried to second-source them...and
>wound up buying a few already-built '390s and replacing the
>manufacturer's ID plate. :-)
>
What the hell, why not an Estee-Lauder 390? Had to smell better than
anything Mr. Collins ever built. Nobody knows how many were actually
built or who made 'em all. There were overseas & domestic knockoffs,
yeah, ID plate scams, refurbs sold back to DoD as new units, etc. The
390 program won several of Proxmire's Golden Fleece Award honorable
mentions.
>
But I'll bet the 390 is the only radio ever produced for 36 years.

All of the above goes down the pipe when there's a wayward light
dimmer in the next room.
>
>Sounds like the unattenuated amplification and bandwidth are
>too much...or there is too much other noise in the locality. But,
>any way is okay as long as it works.
>
Combination of deficiencies, too much bandwidth was one factor but the
worst is/was the overanxious AGC responding to strong electrical
noise. Reducing the front-end sensitivity knocked down the noise
spikes before they got to the AGC which overreacts and triggers gobs
of negative system gain when it gets fed too much signal for it's
taste. Takes milliseconds for the AGC to let go of the gain of course
and when it does finally let go here comes the next freakin' spike and
around we go again and ya hear nothin' except the AGC trying to kill
the noise.
>
Net result was that by putting a "20 dB resistor" (not 10dB) in the
antenna was kinda like I fed the AGC some lithium and calmed it down
and then I was able to copy the guy.
>
The radio has a noise blanker, that helped some and it has some sort
of IF-level post-processing circuit called an "automatic intercept
point", I can't figger out what it is but it operates like a noise
blanker on steroids under certain types of noise conditions. I didn't
switch it in when I worked the French guy, should have done that.The
radio is a little underdash mobile rig, I'm pushing it's limits by
chasing qrp Frogs in noise on 40.
>
>
>Not sure why working a low-power French station on 40 meters

Would work for me, luv it! I've actually experienced the problem.
Popped $110 for a couple seats at the Philadelphia Academy of Music to
take in what I thought would be a nice Saturday nite with Swallisch
and the Philadelphia Orchestra. Dontcha just know some asshole nuevo
yuppy two rows back got on his cellphone FOUR times during the
concert? Answered two incoming and initiated two outgoing calls and
yakked his brains out about his Sunday golf outing. People left in
disgust. He din give a shit. Prolly drives an Expedition, too.
>

I think the Academy seats something like 4,000 and it's always sold
out. If we assume a $55 bucks a pop per seat that dipshit's fine for
using a cellphone during a concert works out to something like getting
tagged for $220,000 for yakking abt his golf date.
>

Like I sed, your concept works for me.

Then don't listen to 2 meters. Is there some reason you cannot turn the dial to another band? Are you disabled? Did you forget to read the owner's manual? If 2 meters is that bad, then go elsewhere. That shouldn't be too difficult for an intellegent person like you to figure out.

You know, I simply don't understand this animosity towards the newer hams. And that is exactly what this is (animosity towards the newer hams) because I rarely see such complaints about the many troublemakers on HF. It's not like the newer hams are taking anything away from the older hams (older as hams, not age). Before the no-code techs came, the 2-meter band was completely dead. There probably weren't 25 people in the entire country using that band on a regular basis, and the number of VHF ham repeaters could likely be counted on one hand.

However, now that the no-code techs are actually using the band, and have put all those repeaters up, the older hams sit around all day complaining. Its not like the older hams have lost anything - they still have all their HF frequencies. And absolutely nobody is forcing any of these people to listen to the 2-meter frequencies. So I just don't understand what all the griping is about.

Perhaps there is some strange twisted logic at work here. Can you explain it to me, Dana? If you don't like the 2-meter band, and nobody is forcing you to listen to it, then why do you sit around listening to it (like you claimed you did above). More importantly, why do you sit around complaining about it when the situation is so easily solved (don't listen)?

ARRL members, Here is a letter that you can use and send to your ARRL section manager, Division director, and ARRL board of Director:

Dear (insert directors name here),

Why don't you wake up and pull your fucking head out of your ass? I am concerned about the quality of amateur radio operators, not quantity. If I wanted to listen to a bunch of stupid operators, I would listen to CB. Do us all a favor and propose something that will impove amateur radio, not dumb it down. Bring integrity and intelligence back into the amateur radio service.
Thanks and 73.

(insert your name here)

When I worked at Intel, a group of us would camp out together. We would meet at a preset place on a Saturday morning, decide where to camp out, and head out at a preset time. Somebody was always late and out of range of CB radios. I talked the entire group into getting their Tech licenses.

We then used a mountain-top repeater to keep in touch with the late comers and direct them to the camp site. It worked out well but only a few of the campers saw any use for HF. After all, they had given up their CB radios and gone to the trouble to obtain Tech licenses because HF couldn't perform the required function.

They are losing, or lost, the PR battle that every no code Tech has a burning desire to get on H.F. A surprising number of Tech class operators don't care for H.F. much. I would dare say that some of the new Hams don't even consider access to H.F. as the "crown jewel" of Ham Radio any more.

```
> - they still have all their HF frequencies.

And some like to go out of their way to tweak the noses of no code Techs
about too.

> And absolutely nobody is forcing any of these people to

the
> griping is about.

With more things to do on V/UHF the lure of H.F. has declined a bit. As you
pointed out, in the past with little use of the V/UHF bands, a Tech class
had few choices for stations to work. That's now no longer true.

>   Perhaps there is some strange twisted logic at work here.

Yup. The Tech class people are having fun, and some of the OTers are really
bugged about it.

Does this mean that you want to reduce the number of hams available
for emergency communications?

It means he wants to improve the quality of amateurs that are available
for emergencies. I'm not surprised that you failed to see that Cecil, but
then you never were one that put much stock in quality.

Does anybody know the procedure for having an individual removed from the news groups if they are as caustic as this "gentleman"? This type of abuse and attacks are totally uncalled for. It is one thing for people to have a little fun with matching barbs but this individual and others are stretching the avenues of freedom of speech beyond civilized limits. How dare he be allowed to character assassinate with the ugliness of a devil. There must be a place to report him besides the "abuse" center.

And One does not expect to produce quality anything by sending such garbage to the FCC or the ARRL. W9FPJ

That's breathtakingly incorrect. The no-code Tech license came to be in 1990. The 2-meter band has been home to thousands of repeaters and a huge amount of activity since the late 1960's. I'm sure plenty of no-code Techs have participated in establishing and maintaining repeaters during the last decade, and more power to them. But the amount of activity at VHF and above prior to that was tremendous, and to say that VHF repeaters exist because of no-code Techs is just a complete distortion of history.

Jon

So Vince, during an emergency, are you and your family going to refuse
to be saved by an amateur radio operator who doesn't measure up to your
standards for quality? As far as emergency amateur radio operators go,
seems to me that halitosis is better than no breath at all.

Take your medications, relax and then re-read what I wrote.

Pay particular attention to my next to last para which I shall re-quote for
you in case you have problems with being able to figure out which is the
next-to-last paragraph:

">> And that can get people killed if
>> there's even a tiny mistake made."

And then I advocated Farraday cages.

Do you know what a Farraday cage is? From your rather silly response, it sure doesn't appear so.

As far as the FCC goes, you really need to learn what the FCC does as, apparently, you think they're some sort of agency which polices what people say about communications. There are resources available on the World Wide Web that will help you understand. Plus, almost any ham radio operator can explain the FCC to you in detail and nearly all of them will - if need be - speak very, very slowly.

When you type: "Call Phone jammers are illegal for a reason!" (what's a "Call Phone" anyway?), I would suggest that you remember that this isn't the "United States' Wide Web" nor the "Jim Wayda Wide Web" but the World Wide Web.
I would suggest that your statement "Call Phone jammers are illegal for a reason!" would be less ignorantly phrased as "Cell phone jammers are illegal in the United States for a reason".

Incidentally, I would never exaggerate my own importance by crossposting a message across a number of newsgroups ("I am important. hear me roar").

However, I shall answer this message by using the newsgroups in which you mega-broadcast your silliness, you supercilious twit.

Is that true, Phil? HR2346 (now part of 47 U.S.C. 302a) said...

"...a State or local government may enact a
statute or ordinance that prohibits a
violation of the following regulations
of the Commission under this section:

(A) A regulation that prohibits a use of
citizens band radio equipment not
authorized by the Commission."

I was under the impression that if the state can pass a law that prohibits the use of such equipment, it can "enjoin operation" of that equipment. Isn't "enjoin" and "prohibit" the same thing?   Likewise, if they can prohibit outright, what is to prevent them from doing so during certain hours of the day?

Likewise, the bill went on to say...

"(B) A regulation that prohibits the
unauthorized operation of citizens band
radio equipment on a frequency between
24 MHz and 35 MHz.

Wouldn't the operation of a station causing interference be an "unauthorized operation?" If so, wouldn't this paragraph cover electronic interference situations when it comes to local enforcement?

Its still against the rules to talk on channel 9. The channel is still reserved for emergencies, traffic advisories, and so forth.

Yeah, we can legally do that. Any ham with an urge to build and half a
brain and a CB xcvr available for "rework" would maybe salvage the
knobs, spkr and mic at most and dumpster the rest.

>
I have five reasonably decent HF rcvrs/xcvrs including one Collins box
and in all cases the ssb/cw sensitivities are in the 0.015-0.025 mV
range. Radios like these are not all about "state of the art"
sensitivity which is a no-brainer and is as often as not a detriment
to decoding weak HF signals. To wit: The only way I could finally get
solid copy out of the three watt French station I worked on 40m cw
last nite was to crank in 10dB worth of rcvr RF attenuation which got
rid of a useful amount of crap in the passband.

Very true. Obviously, the trolls just love to start fights between these groups - hams versus CB'ers (with the occasional scanner or shortwave user jumping in to complain that the message has nothing to do with scanners or shortwave). And, of course, whenever the subject of CB comes up in a ham newsgroup, the bitter old (as hams, not age) men of ham radio always jump in to get at least one more lick at the newer hams. This stuff really does get old after a while.

Vincent Biancomano, meet Lenard Anderson.

Len; Vince stands for everything you despise. Vince; Len stands for everything you despise.

Come out slugging, and may the best man win.

Jim, AC6XG

On the contrary, Vince, Morse code exams are not supposed to
vary from one month to the next.

Of course he has to prove it! His opponents today don't give him credit
for what he did last month; only for what he does today.

Good luck on this one now!

  Again, the locals cannot impose "quiet hours".

  Quite a few years ago, when the quiet hours authority was
  revived/revisited, there was quite an uproar from the ARRL
  General Counsel, who claimed that such unilateral imposition
  would be a defacto modification of an amateur licensee's
  privileges without the required notice and opportunity for
  hearing.  After much negotiation, it was agreed that it could
  only be invoked on an "immediate necessity" basis and then only
  until the FCC could investigate the situation.

>BTW- Those weird quiet hours must have been selected in the 30's... :-)

  That's EXACTLY when they date from, and the "Sunday Morning"
  restriction was to enable AM listeners to hear their church
  preachers on the local station.  The evening hours were to
  enable AM listeners to hear Burns and Allen, Amos n' Andy, and
  "Gangbusters" ...  <ggg>

  There is a section of the Communications Act - Section 4(f)(3)
  - that talks about overtine compensation of FCC field engineers
  making ship safety inspections.  The wording reflects that
  Saturday was a workday (which was true up until 1941), and
  refers to the Field Engineering and Monitoring Bureau, which
  was the name of "the field Bureau" from the early days until
  1966 (it had three more names after that until it was morphed
  into the Enforcement Bureau a few years back). The wording of
  the section was never updated.

>Isn't "enjoin" and "prohibit" the same thing?

  Yes it is...the local  authority can pass an ordinance that
```

says exactly what the enabling statute says. Injunction is a process that can be used to enforce that ordinance.

>Likewise, if they can prohibit outright, what is to prevent them from doing so during certain >hours of the day?

The enabling legislation does not authorize the locals to do this. When it comes to delegation of authority (which this is) if a power is not specifically permitted it's prohibited.

> Wouldn't the operation of a station causing interference be an
>"unauthorized operation?"

No. A 4-watt CB transmitter operated on one of the 40 CB channels can cause fundamental overload and/or audio rectification in unprotected home electronic/entertainment equipment (we proved that in a series of surveys in the 1980s).

In that case the CB operator is "authorized" and the locals do not have any probable cause to invoke the authority to enforce the overpower/off-frequency/unauthorized equipment rules. They do not have delegated authority to require a station operator to make the station available for inspection under penalty for failure to do so, nor do they have the authority to require the station operator to submit to on-air or equipment tests to determine that the equipment is non-compliant.

>If so, wouldn't this paragraph cover electronic
>interference situations when it comes to local enforcement?

The U S Courts of Appeal in several Circuits have all held one after the other that the Comm Act in Section 302(b) specifically grants to the FCC exclusive jursidiction over interference and devices that cause interference. This jurisdiction was not delegated to the "locals".

What time of day is it in Asia when you hear the JAs, VKs, and ZLs? Middle of the work day? Is ten open from the Asia to the East coast at the time when Jeff is hearing taxis on the air from Malasia? Come on Brian, think about it. You know this stuff better than I.

Hmmm... now I'm gonna go feeling all sorry for being mean to you and
stuff... Damn, just when I was enjoying this evil streak of mine!
Oh well...

Thanks for the comments on the "shack." The "shack" is really just a
corner of my office, an office which is occupied more by computers
than radios. The location of the radio gear provides me with a full
180 degree field of view outside, as it's located in a decorative
turret in the 100+ year old Victorian house I call home.

I agree with you on the 7950. Can't kill the darned thing. I use it
to talk on repeaters up to 60 miles away, barefoot, on either a double
trombone vertical or an 11 element Yaqi (full quieting into that

distant repeater on low power with that antenna). Only thing wrong with this radio is one of the LCD elements in the KHz place fails to darken...

The DX-160 is a recent addition. It's a fun receiver. I guess it can be said that I enjoy vintage (but not antique) equipment - but I've sure got my eyes on the new Kenwood TS-2000! Would like to get into more digital modes....

Anyway... no hard feelings I trust... I argue for the fun of it.. . Besides, I'm an asshole from the beginning - even to my best friends... My bark is much worse than my bite....

best 73 de

Ray / AB2HR

Larry Roll K3LT wrote:
> Cecil, I'm going to ask you to set aside your quibbling over the definition of "forced" for a while and give you yet another opportunity to provide the explanation of WHY you think the issue of "force" is relevant re: Morse code testing. It's a simple question; would you mind answering it, please?

The fact that the truth is a thorn in the side of the PCTA is why the argument is relevant. Its relevance helps to alleviate my boredom. Count the number of PCTA folk who have complained about the truth.

You see, Larry, there a quirk of logic involved. Since the government requires and enFORCES Morse code skill as a prerequisite for a US HF amateur radio license, that is prima facie evidence that all US HF hams were forced to pass a Morse code exam. US citizens who were not forced to pass a Morse code exam are not US HF amateur radio operators. There are no US HF hams who used their free will to choose not to meet the Morse code skill requirements. US HF hams simply had no choice at all. Whether they felt forced or not is irrelevant.

Here we go again. Lifer Tech Syndrome rears its ugly head. Divert
attention from that nasty icky code, unhorse the achievers, and achieve
status by trying to buy it. If you can't hack it, denigrate it.

If there is any status in Morse code speed these days, it seems to be in
the eyes of those who can't or won't do it.

>> Get it together, Cecil: everything's NOT equal---

>On the contrary, Vince, Morse code exams are not supposed to
>vary from one month to the next.

Yet another shift of focal point, Cecil? Whether they do or don't doesn't enter into this discussion. The factor under discussion here is that the capability of a human engaged in virtually any human endeavor is going to change from month to month, and even day to day. And the capability to copy Morse is certainly one of those human endeavors.

Thanks to all who replied. I had always read that reg (97.119) as applying
to repeaters but as you state it says "automatic device." My IDer is an
automatic device so 20wpm it is.

```

> jumping in to complain that the message has nothing to do with scanners or shortwave). And, of course, whenever the subject of CB comes up in a ham newsgroup, the bitter old (as hams, not age) men of ham radio always jump in to get at least one more lick at the newer hams. This stuff really does get old after a while.

This reminds me of something I once read about the result of taking a black ant from its anthill and putting it in a nearby red ant anthill.

So one must have an open mind to be able to interpret the license manual correctly? Why didn't they just say it in plain English? Why don't you quote the appropriate section for me?

> Who is talking about "evil"? Not me.

If you're not objecting to something evil, why are you objecting at all?

> That's very good. But it doesn't mean you get a "get out of test free" card.

Yes it did.

> >The testing procedure paperwork

> >didn't change until 2000.
>
> Not true at all.

Of course it's true. The 13wpm standard for Generals was in effect from at least 1951 to 2000. You need to recognize the difference between standards and procedures associated with those standards. The standards had not changed in the 30 days between my exams.

> If he didn't think it was needed, why did he bother at all?

My first choice is crawfish at a restaurant. If they are out of crawfish, I select a second choice.

> Which he could have done before, if it were legal. But it wasn't. He bent the
> rules for you.

I wouldn't be surprised to find out that an FCC examiner had also done something like that in the past. It was a harmless victimless crime.

> > I'm not even convinced that violated the rules.
>
> He did. But I doubt very much you will ever admit that.

Please quote me some proof of violation. My license manual doesn't say retesting for a passed Morse code exam was necessary.

Morse code is like riding a bicycle or swimming. One doesn't forget Morse code in one month. It was obviously at the discretion of the code examiner whether to give a second code test or simply sign off based on the results of the first test a month before. I wouldn't be surprised to find out that FCC code examiners did exactly that for someone they recognized and remembered. It's just human nature.

Again, stay to the point: there's variability in human ability every day of the year. People who can copy 1-minute solid at one speed one month may not be able to do it at the same speed the next month. That's an absolute fact, not changed by the fact that you were not made to follow that route some 40+ years ago. Nothing you can say alters the fact that there's variability in human response to the point of what you did yesterday you may not be able to do today. And, not counting car accidents and near-fatal experiences and the like, that could be simply because you just don't feel good today.

Regards,
Vince, WB2EZG

It's about time.  Now, all we need is to get rid of all those cordless phones
baby monitors, and [stock] video senders that keep jamming my repeater's input
on 2405.000.

Wasn't the problem, not with this little TS-50, much to my surprise it
seems to be as as good as any radio I've ever used in this respect.
Haven't run into so much as a hint of IMD yet and I wuz in the piles
on 80cw in the contest which is my real world front end linearity acid
test. I have no reason so far not to rank this little mobile rig's
front end right up there with the 75S-3B's front end. Absolute fact.
>
The problem was local electrical noise which grabbed the agc. I
cranked in the attenuator which tamed the over-aggressive acg which
then allowed me to hear Frenchman.

It has a circuit/thingey called an "automatic intercept point",
whatever that is, the manual barely mentions it. I didn't pay any
attention to it until yesterday when I finally dug into it. It's
effect is sorta like a super noise blanker which is quite effective on
cw. 'Way better than the noise blanker. If I'd switched it in when I
was working the F6 I woulda had it made.
>
>One reason why the published numbers are only a starting point, and why designs

>
Sure, some of 'em can and I was sure as hell no fan of the early solid
state rcvrs. HRO-500: Whatta crapper! I now have some solid experience

with three current (+/-) solid state mid/high end rcvrs and they're
all really decent, I don't have any major performance squawks even
with the TS-940 which is a 20-year-old design. There's no question in
my mind that today's solid state gear is very much up to snuff as far
as performing as well as any of the tube-type radios ever did or can
do. Not counting cheap clunkers of either type. Top-notch solid state
front ends have arrived. When you add all the additional tricks the
new radios do there is no contest and it can only get more so.

  No, Leland, no one is "bugged" about that. Many of us have dedicated a
huge amount of our personal time to help make that happen, in case you
didn't know what a VE does.
 What many are "bugged" about is the lowering of requirements,
especially for the highest class of license. Nothing more.

Loose Mouth Lennie does it again, he really doesn't mind embarassing himself at all with such drivel. It is a hard fact that in most places 2 meter activity today is a fraction of what it was before 1991. In most places a SMALL fraction.

Dick

  Now now, Dick...

  In all fairness to Mister Anderson, he agreed that 2-m wasn't
  dead...follow the quotes above backwards and you'll see that it
  was someone else who said that.   My point was that 2-meters
  was alive in the Soiu Cal area long before 1977.

Ray:

I've never taken anything said in this newsgroup personally against the sender; I consider this to be a hobby (just like ham radio) and I entertain myself by participating here. What I say when I'm making statements about my personal feelings on a particular policy issue are my true thoughts and feelings, but there is a lot of rhetoric and ego-induced posturing that I'll admit is tongue-in-cheek, while others won't. Nothing said here is going to influence any policy decisions anywhere it counts; all we're doing is honing our arguments for the time that we present them to the FCC, ARRL, or other legitimate agencys that DO effect change in the ARS.

Any and all participants in this newsgroup are people I've come to think of as special friends over the years, regardless of our differences of opinion. This is America; you get to disagree with me, I get to disagree with you, and we both get to keep living! Therefore there's no need to feel guilty for something every last one of us has done in the safety of our own home while looking at a monitor and pounding a keyboard.

BTW I also have the multi-mode "brother" of the Kenwood TR-7950, the TR-9130. It is mainly my own home station packet transceiver lately, and has been parked on the PacketCluster freq. for the better part of two years now. Only thing is, I've had this one 2 years longer than the 7950; purchased it at the Gaithersburg (Maryland) hamfest in Sept '82!

Dwight:

Why do you feel I have a "superior attitude" because of the morse (sic)
code?  I've said, repeatedly, that it is a proven fact that people from
all walks of life, surely people both much less and much more intelligent
and talented than I am, have mastered the Morse code with no
difficulty.  I don't think I'm anything special at all as a ham, certainly
not because of my ability to pass a 20 WPM code test.  I'm just an
average guy who achieved a thing which is well proven to be achievable
by average people.  Whut's yer pernt?

>are no US HF hams who used their free will to choose not to meet the
>Morse code skill requirements. US HF hams simply had no choice at all.
>Whether they felt forced or not is irrelevant.

Cecil:

OK, so WHAT if I was "forced" to take a Morse code test? Was I
also "forced" to buy all the stuff that goes into my ham shack, and was
I "forced" to use it on the air? Am I being "forced" to make CW QSO's
simply because I was "forced" to take the tests, "forced" to succeed
at them, and "forced" to take the privileges that went with them?

Again, Cecil, please explain the RELEVANCE of the word
"forced" in the context of the Morse code testing requirements. You
still haven't done that. I don't give a rats a$$ about the definition of
the word. I know what it means. I just want to understand what you
are trying to say with regard to this "force." I want you to explain how
this "force" has meaning to the average citizen who VOLUNTARILY
takes it upon himself to acquire the knowledge and skills necessary
to become a radio amateur in the United States or anywhere else on
planet Earth. I'm sure there must be an agenda hidden in all that
quibbling somewhere, and I'm not willing to wait until July to finally
pry it out of you. Give. Now. Please! Shit or get off the pot!

which is nonsense. HF is as popular as ever. the fact some folks cant
use 'em doesnt mean they're not popular.

which, of course, has nothing to do with HF at all, since this is not
its use.

The local operators of TV channels 15-19 will not be impressed nor will the areas where the freqs are used for S and T band (essentially the 450-470 UHF band repeated). The mudducks you step on may well be the local gendarmarie. They will be less than impressed as well.

```

You're so right Phil, I misread the multiple level attributions. I should've known that even Lennie would know better than that.

Dick

 And much more interested in finding the source. Our primary talk-in
repeaters were and are on that band, as are lots of others.

Seems to me 27MHz lies within that range. Is 7MHz HF? Is 4MHz HF?
Is 29MHz HF?

It has everything to do with HF configurations not being able to deliver the required performance. Along with CW, has HF also become such a religion that nobody can admit that VHF/UHF repeaters have some advantages over HF without repeaters?

Larry Roll K3LT wrote:
> OK, so WHAT if I was "forced" to take a Morse code test?

So, it's just simply true, Larry. Yet you have been denying it.

> Was I
> also "forced" to buy all the stuff that goes into my ham shack, and was
> I "forced" to use it on the air?

Nope, you are not required by circumstances (forced) to buy any ham equipment and you are not required by circumstances (forced) to use it. However, you, as a US HF ham, were required by circumstances (forced) to pass a Morse code exam.

> Am I being "forced" to make CW QSO's
> simply because I was "forced" to take the tests, "forced" to succeed
> at them, and "forced" to take the privileges that went with them?

Nope, you are not required by circumstances (forced) to use your ham privileges.

> Again, Cecil, please explain the RELEVANCE of the word
> "forced" in the context of the Morse code testing requirements.

The relevance is that it is the truth, Larry.

> You still haven't done that.

Truth may be irrelevant to you, Larry, but it is relevant to me.

> I'm sure there must be an agenda hidden in all that
> quibbling somewhere, ...

Nope, no hidden agenda - just a love of the truth.

Whoa there, Larry. You have stated in the past that knowing Morse
code at 20wpm makes you a superior ham. Last time I checked,
superior equals special.

If you don't believe that a ham who can work CW at 20wpm is more qualified than a ham who can't that's your problem. But it's not the truth that you profess to love.

I think in such a blatant case, a more dramatic solution might be in order.
Like maybe getting the folks in your part of the hall to join you in getting
the conductor's attention & asking him to pause the performance -- then
publically explaining exactly *why* you need the orchestra to go back a few
minutes & start over.

Alternatively, get the offender's phone number, call him, and tell him a
close relative has died...

How often does a phone "auto-register"?

It seems to me like something that would take too long to identify who's carrying a phone. If the offenders have a couple of minutes between transmissions, that's plenty of time to get past any checkpoint (without even trying) and into the hall. Even if they stay in a lobby long enough to get detected, by that point it's awfully hard to tell *which* patron is offending.

One doesn't jam the transmitter under "normal"
circumstances. It's the receiver that is usually
jammed.
--------------------------------------------------------
> How does the person with the cellphone
> jammer know for sure that the jammer
> is only jamming frequencies only used
> by cellphones?
--------------------------------------------------------
Let's clear this up. A "jammer" is a
transmitter. That's all. A transmitting
frequency is set on a "narrow-band" jammer
the same way it is with any other xmitter.

["Broadband" or "sweep" jammers are
generally only used on the battlefield.]

But jammers /are/ designed to defeat
reception and a lot of jammers cause
spurious emissions and they also,
generally, have filthy power supplies.

And that can get people killed if
there's even a tiny mistake made.

I'm looking forward, myself, to cafes
and coffee shops which advertise
themselves as being in Faraday cages.

>Hello FCC, are you tuned in here?

Some people just gotta regulate everything! Is it some kinda power trip, or
what? Around here we rely on good manners, not the damned government
bureaucrats deciding how we should act. Move to China if you don't like it.
(Yes, Hong Kong is in China.)

Maybe what we really need to develop is a cellphone *detector*. Something that looks like a metal detector, but serves to ring any cellphone within a 2-meter radius. You have to go through to get into the theater, and if you ring on your way through, you don't get in...

I suppose a simpler alternative is to require anyone whose cellphone rings during a performance to reimburse the rest of the audience's tickets...

W9WI said:

> Maybe what we really need to develop is a cellphone *detector*.

They already exist. Simply an alert receiver which looks for cell device transmissions such as "auto-registration" signals, and lights an LED or sounds a buzzer. Commonly used in 'secure' conference rooms, cardiac care units, and similar environments, where sensitive conversations take place, or where 'EMI' from the cell phone transmission could upset sensitive electronics in patient care equipment, avionics, etc. Because they have no audio detection/amplification stages and therefore cannot 'listen' to the conversations, they apparently slide under the radar of "no monitoring of cell phone freq" rules.

Yes, we need a cell phone detector.
That way, in cases like a movie theater, we can jam the cellphones ourselves.
Jam it up their butts that is. :)

Sounds like a dumbed-down computer user to me. That's the problem with our society today - too many dumbed-down people too lazy to put out a real effort to improve themselves or contribute anything back.

> [snip] And, I assure you, there is nothing
> about any "newsreader" that I could not
> master [snip]

That's what the techs say about morse code (and license upgrades), but that doesn't stop you from giving them a hard time. Why should we let you off the hook either? Real computer users don't use AOL. And today (with the digital modes), it takes a real computer user to be a real ham.

AOL = No Computer User
No Computer User = No Ham
No Ham = Larry

Sorry, Larry, I just had to give you a hard time over this. ;-)

One must have an open mind to interpret the regulations correctly. Indeed, interpretations of the laws and regulations are a big part of what lawyers and other legal folks do. Ask Phil Kane.

> Why didn't they just say it in plain English?

They did.

>Why don't you quote the appropriate section for me?

I don't need that much typing practice. You've got more time than me, anyway.
>
>> Who is talking about "evil"? Not me.
>
>If you're not objecting to something evil, why are you objecting
>at all?

Who is objecting? All I did was point out that Shorty bent the rules and lowered the standard for you 47 years ago. Nowhere did I say it was "evil", "bad" or "wrong". Nor did I say that the CSCE system was a bad idea.

In fact, I referred to your examiners as "visionaries" because they essentially did the CSCE thing decades ahead of its time.

I have absolutely no doubt that you would have passed the test the second time, Cecil.
>

>
>Of course it's true.

Of course it's not true. The standard is far more than just the speed.

Suppose the standard was changed from "one solid minute out of five" to "thirty seconds solid copy out of three hundred" but the speed was unchanged. Would that be a change of standard or not?

> The 13wpm standard for Generals was in effect from at

The procedures are part of the standards.

> The standards had not
>changed in the 30 days between my exams.

That much I agree with - the same rules were in effect both times. The standards back then were that retesting was necessary.
>

He blew up his VFO because you like crawfish?

> If they are out of crawfish,
>I select a second choice.

Is crawfish like lobster? Maybe we can set up a bet with W1RFI.

The simple fact is that Shorty probably knew he was supposed to retest you on the code by the strict letter of the regs. That's why he did so. When his equipment unexpectedly failed, he bent the rules by taking a third-party's word on it.
>
>> Which he could have done before, if it were legal. But it wasn't. He bent

>> rules for you.
>
>I wouldn't be surprised to find out that an FCC examiner had also done
>something like that in the past.

Name one. The only FCC official irregularity I have ever heard of is the guy who sold vanity calls many years ago. He went to jail for that, I understand.

Here in Philly, ol' Joe Squelch wouldn't bend the exam rules one tiny bit. No way. When he said you passed, you KNEW you passed.

> It was a harmless victimless crime.

Your calling it a "crime" indicates you have some lingering guilt and shame. There's no reason to feel bad about it anymore - the standard requiring retesting was changed years ago, when CSCEs were introduced.

The situation is somewhat like the person given a ticket for doing 65 mph on a road where the speed limit is 55 mph. But before the ticket is paid, the speed limit on that road is raised to 65 mph with no other changes to the road. Is the speeder still guilty? If challenged, would the court uphold the ticket? I honestly don't know.

>> > I'm not even convinced that violated the rules.
>>
>> He did. But I doubt very much you will ever admit that.
>
>Please quote me some proof of violation.

It's in the book.

> My license manual doesn't say
>retesting for a passed Morse code exam was necessary.

It does if you read the whole thing with an open mind.

btw, note that CSCEs are only good for 365 days (watch out for leap years!!) The FCC has gone after some who have been suspected of altering the date on a CSCE to avoid retesting. In one case I read about, the alteration was a matter of days, yet the FCC enforced the rule that it was no good after 365 days. Even if the test and the standards have not changed, the CSCE is good on the 365th day and worthless on the 366th day.

It is relatively easy to obtain a license to operate a marine radio on land. To do so, you must have a special license, called a marine utility station license (a ship station license is not sufficient). To be eligible for such a license, you must provide a service to marine vessels. In addition, you must show a need to communicate from a coast location. Common coast stations include: marinas, radio repair shops, bridges, locks, and yacht clubs. Coast stations operate under FCC rules applicable to private coast stations, not under rules applicable to ship stations. Coast Guard facilities, and Auxiliary facilities, operate under Coast Guard regulations and are exempt from FCC regulations.

FYI, on April 17, 1996, the Coast Guard suspended enforcement activities concerning FCC Radio Station Licenses carried aboard voluntary ships, except for distress communications and interference with distress communications (voluntary ships are vessels under 20m in length, except commercial fishing vessels and vessels for hire with more than 6 passengers). Today, the FCC regulates marine communications, in cooperation with the Coast Guard (this cooperation includes Coast Guard RDF facilities).

Sorry... You can take your foot out of your mouth. Granted - I DID
get my Extra AFTER April 15, but I DID happen to pass the 13 wpm
General class license prior, and happen to support code testing
requirements. As a matter of fact, I was well on my way to meeting
the 20 wpm requirement when the reorganization announcement was
released. As a VE I happen to administer the code tests in this area.
BTW, how DOES that toejam taste?

Egads, did you type that or do an OCR scan? Note that "required" is
one of the definitions of "forced".

Hey Len,

Vince doesn't seem to be able to figure out what's going on, so I'll ask
you.  How come you never respond to a Vince Biancomano post?  It seems
you two would have so much to talk about.

Jim

Nope, I'm assuring you that they remember very well, but they still
only give him credit if he actually does it today. He cannot "pull
a Cecil" and claim credit for having done it last month.

Good luck on this one now!

On the contrary. You are merely an irritant. If I didn't make it clear to you, what I was seeking was a discussion between two of the most highly irritating people here on the newsgroup. And it so happens that each of you argue at complete polar opposites and have never chosen to correspond. I find that mildly curious.
> Is that why you expressed a desire

> to show up at my house to "give me a heart attack?"

Please rethink this remark, Leo as it is disputed by the facts.

That doesn't matter to Dick. Even if you now get your code speed
up to 50wpm, to him you will always be an Extra-lite. There's no

way for you to redeem yourself.

You trying to tell me that his opponents forgot in one day that Shaq
can dunk a basketball???? So they will leave him unattended under his
own goal???? Please tell me what team you are talking about so I can
bet against them.

Bullshit. The offenders are a tiny minority.

In any case, you have two options:

  1) Get over it!
  2) Move to someplace like Hong Kong.

73, Hans, K0HB

All second-sourced military equipment is identical. I wasn't aware that Motorola also produced the '390 series but there is a story about a cosmetics firm that tried to second-source them...and wound up buying a few already-built '390s and replacing the manufacturer's ID plate. :-)

>>
>I have five reasonably decent HF rcvrs/xcvrs including one Collins box
>and in all cases the ssb/cw sensitivities are in the 0.015-0.025 mV
>range.

Sounds like they could use some maintenance and tweaking. 15 to 25 microvolts sensitivity is rather poor.

If you mistyped and meant to say 15 to 25 nanovolts, I think that the test equipment needs calibration. Thermal noise in a 50 Ohm system, 500 Hz bandwidth, at room temperature is 10 nanovolts RMS. That doesn't count a receiver's front-end noise or increase from mismatching to an antenna or galactic/atmospheric noise.

>Radios like these are not all about "state of the art"
>sensitivity which is a no-brainer and is as often as not a detriment
>to decoding weak HF signals.

State of the art in receiver sensitivity for 5 KHz BW AM and 10 db signal to signal-plus-noise is about 1 microvolt for tube types, about 200 nanovolts for solid-state, all on mass-manufactured receivers. All on HF assuming no mis-matching or galactic/atmospheric noise, no exotic tubes or semiconductors. Those figures get better by the square-root of bandwidth reduction and chilling down the front-end circuitry. More improvement can be done by post-detection processing.

>To wit: The only way I could finally get
>solid copy out of the three watt French station I worked on 40m cw
>last nite was to crank in 10dB worth of rcvr RF attenuation which got
>rid of a useful amount of crap in the passband.

Sounds like the unattenuated amplification and bandwidth are too much...or there is too much other noise in the locality. But, any way is okay as long as it works.

Not sure why working a low-power French station on 40 meters has anything to do with bootleg operations on 10 meters. :-)

There's variability around thresholds. Away from thresholds, such things are binary functions. I was nowhere near the 13wpm threshold when I took the exam so your statement is uncorrelated to the reality that existed at the time.

> And, not counting car accidents and
> near-fatal experiences and the like, that could be simply because
> you just don't feel good today.

Well, if you don't feel good today, Vince, stay in bed. I felt fine when I took my code exam so your statement is uncorrelated to the reality that existed at the time.

In article <98pguq$3mm$1@news.service.uci.edu>, "Jim Kelley" <jwkelley@uci.edu> writes:

>Vincent Biancomano, meet Lenard Anderson.

There is no "Lenard Anderson" in this newsgroup, Mr. Kiley.

>Len; Vince stands for everything you despise. Vince; Len stands for
>everything you despise.

Now, now, Kooley, you are being VERY ABUSIVE! Tsk, tsk.

>Come out slugging, and may the best man win.

Kaylie, Vince Biancomano and I have been in correspondence
a number of years back. Vince was an editor with McGraw-Hill's
Electronics magazine bi-weekly and I contributed a 9-IC PRSG
thing to Designer's Casebook (reprinted in Casebook #3, circa
1978). Vince wrote the acceptance letter. Another editor took
over shortly thereafter. There was no animosity expressed on
either side.

Why do you want to manufacture a dispute? Do you have some
primitive urge to do battle? Is that why you expressed a desire
to show up at my house to "give me a heart attack?"

How does all that tie in with elimination of the morse code test
from the US amateur radio license examination?

Subjective judgement. The same "irritation" remark can be
attributed to yourself.

> And it so happens that
>each of you argue at complete polar opposites and have never chosen to
>correspond. I find that mildly curious.

You are at fault for not noticing a series of message exchanges
between Vince Biancomano and myself in the past. Your
problem, not mine.

YOU are the one at "polar opposites" in a subject thread labeled
"Pride." Is it prideful to attempt antagonizing others and goading
them into verbal fights just because you want "to be entertained?"
That went out with Rome and the Coliseum fests.

In case you missed it, here is the latest score from the
Coliseum: Lions 8, Christians 0.

>> Is that why you expressed a desire
>> to show up at my house to "give me a heart attack?"
>
>Please rethink this remark, Leo as it is disputed by the facts.

No need to rethink anything. You implied the above in a
public message. Public messages seen by all are about as
factual as one can get.

Which means I could still pass a 20wpm test, far away from the 13wpm threshold.

> Third, again, it doesn't change anything regarding

But I did take the entire bank of elements, Vince. I just didn't take them at the same time. Since the latest theory indicates that time, as we perceive it, doesn't exist, your argument is irrelevant.

:-)  Mine's lighter.  Very colorful word actually.  Richard is implying
that you are like a male school teacher.  Or more in particular, one who
formally and unimaginatively or unduly emphasizes minutia and precision.

How could he say such a thing about you?  ;-) If we didn't overwork
ideas here, (seeing as we all share the same basic interest) we'd be
left with virtually nothing to argue about.

You may recall that I said I hear them on the bottom of 40 meters. I
said that I hear CBers on 10 meters. That band seems never to be open
when I tune to it.

Still more shifting of the focal point, Cecil! Knock yourself
out.

>Since the latest theory indicates that time, as we perceive it,
>doesn't exist, your argument is irrelevant.

More shifting to get away from the basic point. Keep praying for
that break that is never coming to you. Given your position,
your time would be put to better use looking for that 300,000
foot alien you believe might exist. Through wasting our time yet?

You didn't know at what point you were, especially for a true
one-minute solid copy test. Second, in a true one-minute solid

copy test, at that range you could be off from one week to the next by 5 wpm. Third, again, it doesn't change anything regarding your experiences of not having to take the entire bank of elements over when you should have, which is the focal point of where you want to go with this. You don't need to express any rationale in that regard, Cecil. It's simple enough to say: that's what I did, and tough to anyone who doesn't like it.

Well, Shorty was the one with the open mind. You seem to be the one with the closed mind.

> >Why don't you quote the appropriate section for me?
>
> I don't need that much typing practice. You've got more time than me, anyway.

Well then, please tell me where it exists in a 1957 ARRL License Manual. I haven't been able to find it.

> Who is objecting? All I did was point out that Shorty bent the rules and
> lowered the standard for you 47 years ago.

He may have bent the rules. He didn't lower the standard. The standard was one minute of solid copy at 13wpm. I far exceeded that standard one month earlier.

> Shorty exceeded his authority.

Since he was the only authority present, I would say he used his discretion.

> Suppose the standard was changed from "one solid minute out of five" to "thirty
> seconds solid copy out of three hundred" but the speed was unchanged. Would
> that be a change of standard or not?

But that didn't happen. The standards didn't change in one month. I exceeded the standards one month earlier. The procedure was all that was changed.

> The procedures are part of the standards.

Then why do we have separate words for "procedure" and "standard"? Invariably, there are a set of standards and a separate set of procedures for verifying the standards.

> That much I agree with - the same rules were in effect both times. The
> standards back then were that retesting was necessary.

Nope, the procedure may or may not have been that code retesting was necessary. I haven't found a definitive statement in my 1957 ARRL License Manual.

> The simple fact is that Shorty probably knew he was supposed to retest you on
> the code by the strict letter of the regs. That's why he did so. When his

He didn't tell me he was bending the rules. I'm still not sure that he bent the rules.

> >I wouldn't be surprised to find out that an FCC examiner had also done
> >something like that in the past.

>
> Name one. The only FCC official irregularity I have ever heard of is the guy
> who sold vanity calls many years ago. He went to jail for that, I understand.

That partially proves my point. If it happened and you didn't hear about it,
then the FCC apparently didn't consider it an irregularity. :-)

> Here in Philly, ol' Joe Squelch wouldn't bend the exam rules one tiny bit. No
> way. When he said you passed, you KNEW you passed.

Given all the FCC examiners throughout the US, don't you think there might
have been one or two who recognized a friend, remembered he had passed the
exam with flying colors just a month before, and signed off on the code test
without actually performing a second code test?

> Your calling it a "crime" indicates you have some lingering guilt and shame.

Nope, it doesn't. I smoked pot in the past. That's a victimless crime and
I have no lingering guilt and/or shame. In fact, I wish I had some of that
"one-hit-$hit" that I used to smoke in CA when I was young and foolish.

The problem is, of the current generation, very few know what good manners are.
Cell phones ringing in theaters, church, restaurants and idiots on the cell phone
weaving from lane to lane in traffic aren't good manners but most of the bozo
users
haven't a clue.

In 1958, the first "public" 2-m repeater in the LA area
(K6MYK on Mt. Lee) went on the air, and we used it for "public
service" in relaying election district counts in the
gubernatorial election that put Edmund G. "Pat" Brown (Sr.) in
the governor's seat. That was both the first election that I
voted in and the first repeater that I had used. We certainly
had much more than 25 people on that machine at that time and
continuing.

In 1961 I relocated to NY and amazed folks back there with
tales of the "repeater"...we had at least 25 people on our
simplex 2-meter net.

When I returnmed to California in 1963 and used the repeater
located in the San Bernardino Mountains we certainly had more
than 25 users.....

When I finally went "FM" on 2-meters in 1973 we had more than
25 people on our machine in the San Francisco area.

"Dead"? Hardly.

Just who is "unhorsing the achievers?" :-)

It would seem that, if there be "horses" then the nags are those who keep insisting that the morse code test must be kept and inviolate forever and ever...

If there be "Lifer Tech Syndrome" then it is in response to all those whose Life is tied up in amateur radio equalling working CW on HF. Now that's a Real Lifer syndrome if there ever was one!

If you have achieved morse proficiency all by yourself for your own reasons, fine. Applause. Now explain to everyone why ALL newcomers to HF amateur radio MUST test for morse code proficiency at any speed?

Oh, yes, if the morse code test is eliminated, then the Real Lifers lose their self-perceived "superiority" and are down a bragging point. Seems to me, Mr. Electric Horseman, that all you and other Real Lifers have done is to create a virtual steed instead, not a real one.

Perhaps you are saddle sore or your fist is tired from holding onto the guidon while on this virtual horsie? This isn't a "battle" and nobody is doing a Charge! blow on Gabe's trumpet because you, personally, feel the need to keep that code test forever and ever... because you had to do it.

As another Richard cried, "A horse! A horse! My personal ham kingdom for a horse!" Poor guy, he couldn't "bring on the empty horses."

Saddle up, cowboy. Mind them pies in the field.

Considering that the FCC, not the ARRL, sets the standards for licensing, and such standards are based SOLELY on radio knowledge, I don't see what good such a "letter" would do.... Regardless, someone who is a genius could easily pass any test and still be an asshole, while any idiot can be nice, decent person, so I additionally fail to see how intelligence relates to the "standard of quality" that you're striving for.

Considering that what you want is a morals test, explain to us just how YOU would pass it with such a proposed letter as you stated here?

I wouldn't say that. My clock is four hours ahead of yours. I usually hear hams on 10m from that part of the world for couple hours between 6 and 8pm local here which is 6-8am the next day in Kuala Lampur and 2-4pm in L.A. Oughta be some cabs running around Kuala Lampur at 6-8am there? Beats me.
>

```
I assume the band opens to Asia for you roughly the same time local it
opens for me local. Lets say 6pm in L.A.. which is 10pm here and 10am
in Kuala Lampur when the cabs are obviously running around. The
chances of me hearing southeast Asiaians at 10pm is between very slim
and nil, 10 has gone beddy-'bye except under exceptional condx.

>could likely be counted on one hand.

There were quite a few more than "25." :-)

Back in 1977 Harry Terraneau demonstrated a tone-signalled repeater chain that extended from north of California's Bay Area down the coast and into Arizona. Devised, innovated, and made operational by radio amateurs before the advent of the personal computer or widespread availability of microprocessors. Had an extensive tone-coding scheme to turn-on a path as desired, a rather thick little notebook carried by net members. On the first demo Harry coded in the Mount Wilson repeater from Newbury Park, CA, had a quick chat-hello with a friend who was mobile in motion in the El Segundo area, enroute to the Hughes facility there.

Not sure of the network's name then but it has a strong resemblance to the Condor Net of today.

In 1977 the old-time (not age) hams were still discussing state-of-the-art HF DX. In 2001 the old-time (not age) hams are still discussing state-of-the-art HF DX (and haven't left the state).

Back then it was still necessary to learn CW in order to get an amateur radio license that permitted innovation, experimentation and fun of trying NEW things by hobbyists. The need to learn enough CW for a license remained for 14 more years in the USA until 1991...as if CW knowledge demonstrated to the FCC was some kind of "necessary" communications skill.

24 years later a bunch of old-time (not age) hams are busy

dissing Technician class licensees because they aren't "real hams." Maybe that's why the diss is still served hot...

Congratulations. You've come this far in advancing the state-of-your-computer-art. I am optimistic that you will advance beyond Computer
Novice class.

>Uh huh. Now tell me how to spell check my newsgroup replies,
>strictly within the confines of the AOL program.

Apply yourself and overcome your ignorance by reading the free
documentation supplied with your free AOL software. If you cast
off your ignorance and pre-biased attitudes, you too can become
a more advanced computer hobbyist!

>Yes, I agree. AOL has a free e-mail spell checker. However, this is
>being done in Newsgroup mode. Sooo, please scroll up and answer
>my question.

All the answers are supplied in your free AOL software documentation.

Apply yourself. Cast off your biased attitude an work, struggle to overcome your ignorance. Don't try to rationalize your pony-tailed, knuckle-dragging computer neanderthalistic attitudes. You can do it. Hundreds of thousands of other computer users have done it.

>Izzat so? Yep, zat's so! Seen 'em myself! Thank you, Grandpa
>Lennie, for being the master of the perfectly obvious.

There's no need to be abusive, to drag your knuckles all over the blackboard of the newsgroup. It makes a bad sound.

>C'mon, Lennie -- can't you come up with anything more original than
>that? Oh, never mind.

Now, now, you are being abusive. Jam Kellay doesn't like abusive newsgroupies in here.

You just settle down and APPLY yourself. Take advantage of the free software, buckle down and WORK at using your available software. Over a million AOL users have done just that, so why can't you?

Maybe I wasn't clear enough   in my question. I'll ask more slowly:
why   don't   you   respond   to   Vince   Biancomano   posts?

I just think you two are perfect for each other. That's all.

As far as manufacturing animosity, well, I hardly think I need to do
that. You harbor enough of it already.

Jim

In article <3ab05066.79688699@news2.dvol.com>, kelly@dvol (Brian Kelly, w3rv) writes:

>For blatently obvious reasons. Let's not forget the Motorola versions
>of the 390.

Motorolas are usually prized because of quality construction and the use of components that fared better over time. Collins-made ones often have wiring harnesses whose insulation is cracked and failing.

Because those receivers are modularized, typical ham ones often contain modules from several different manufacturers.

How about the R-390A, a design from 1954. Granted, it's not a typical ham receiver, and they are big boys, but they are common enough to be readily available for far less than $1k. And they are pretty good, as demonstrated in a series of articles by Ray Osterwald, N0DMS, in Electric Radio (1991).

He first measured the performance of a stock 1956 Motorola R-390A. He got these results:

MDS (3 dB rise over no signal condition): -127 dBm at 2 kHz bandwidth, -147 dBm at 100 Hz bandwidth

Input for 10 dB S/N ratio: .44 uV (-117 dBm) at 2 kHz bandwidth

Blocking dynamic range: 72.1 dB

2 tone 3rd order dynamic range 52.7 dB

He then did some mods to the AGC and IF amplifiers, using better tubes developed in the early '60s. The results are shown below:

MDS (3 dB rise over no signal condition): -130 dBm at 2 kHz bandwidth [3 dB improvement over stock]

Input for 10 dB S/N ratio: .2 uV at 2 kHz bandwidth

Blocking dynamic range: 105.2 dB [33.1 dB improvement over stock]

2 tone 3rd order dynamic range 82.8 dB [30.1 dB improvement over stock]

Finally he modified the RF section to use better tubes in the mixers. The final results are as follows:

MDS (3 dB rise over no signal condition): >-150 dBm at 2 kHz bandwidth (limited by test setup) [>23 dB improvement over stock]

Input for 10 dB S/N ratio: .022 uV at 2 kHz bandwidth

Blocking dynamic range: 123.5 dB [52.4 dB improvement over stock]

2 tone 3rd order dynamic range: 101 dB [48.3 dB improvement over stock]

Pretty good for a design from 1954, updated with tubes from the mid-60s. The R-390A is a multiconversion general coverage design. A ham bands only design could do even better.

Numbers are from Electric Radio for May and June of 1991. The tubes used are relatively common TV types and the mods consist mostly of changing resistors.

Note that most of the numbers are for SSB bandwidth (2kHz).

But for typical ham use, I'd rather have a 75S3B, for a whole bunch of reasons.

For a chart listing many typical ham receivers, see:

http://www.sherweng.com/table.html

The 75S3 MDS is rated at -141 dBm

>I have five reasonably decent HF rcvrs/xcvrs including one Collins box
>and in all cases the ssb/cw sensitivities are in the 0.015-0.025 mV
>range.

Once you get below a microvolt or so, external noise usually dominates on HF unless the antenna is very small or the location very quiet.

> Radios like these are not all about "state of the art"
>sensitivity which is a no-brainer and is as often as not a detriment
>to decoding weak HF signals.

AMEN! The real problem is often picking the 1 uV signal out from between the hordes of 100,000 uV signals.

>To wit: The only way I could finally get
>solid copy out of the three watt French station I worked on 40m cw
>last nite was to crank in 10dB worth of rcvr RF attenuation which got
>rid of a useful amount of crap in the passband.
>>

All sorts of IM products to deal with. A case in point of the above problem. One reason why the published numbers are only a starting point, and why designs from decades ago can outperform many "modern" ones.

I went thru two kinds of "boating", first came 110mph APBA hydroplane
racing, no radios. My second phase was putzing around the upper
eastern shore of the Chesapeake with the 18 foot lapstrake (real
mahogany strakes by golly) speedy inboard runabout my Dad built which
I equipped with the properly licensed Ray Jeff. Lotta crabbing and
water skiing, the usual Cheapeake country kinda things ya do with a
powerboat.
>

Supplemented by the 5w HT permanently perched on a shelf in the
kitchen of the summer cottage on the Bohemia River.
>

The Ray Jeff was always parked on 16 while underway for obvious
reasons as was the HT 24/365.
>

99% of all comms over many years with the old Ray Jeff went like:
HT: "Alice K you copy?" pfft.
Alice K: "Copy." pfft.
HT: "12" pfft.
Alice K; "12" pfft.
(twist knobs to ch. 12)

```
HT: "Yo Brian where are you?" pfft.
Alice K: "Just passed can 8 inbound, 'bout 20 minutes out" pfft.
HT:  "OK, I'll light the briquettes" pfft.
Alice K: "The kids are really hungry, Alice K (KJB???, whatever the
hell it was) clear 12." Pfft.
>
A tad shady? I reckon. Arguable in this NG? Of course.

No they can't. The federal legislation allows the locals
to enforce the federal rules. The city can't change the
federal rules, nor can they change the burden of proof
and other aspects.

> If the neighbors are
>willing to come to court and testify (as they must now do in dog
>barking violations), all they have to do is convince a judge beyond a
>reasonable doubt that the CBer is disturbing their electronic piece.

If we limit our discussion to your example, that
wouldn't fly. The missing element would be
what, if anything, was the CBer doing illegally?
Just operating CB doesn't cut it in this case anymore
than a ham being accused of interference.

>A similar situation happened to a ham recently (as discussed earlier
>here), and they didn't even need to make new law to take him to court.

Who took the ham to court? Where? What was the charge?
What was the outcome?

>As far as the legal equipment argument goes, the FCC can impose quiet
>hours on a *legal ham* now if he can't work things out with his
>neighbors. The city could easily make such a law to do the same thing
>to a CBer...

The city can not operate on that basis from anything I have
read about this law. You are extending the power of
enforcement far beyond the legal boundary that the
legislation supports.

As to the FCC setting quiet hours on legal hams, that
is a very "rare" situation and I have not seen or read
of that being done at all in many years.

Cheers,
Bill K2UNK

What are you smoking? I have been on 2 meters since the early sixties. I have 40 states confirmed, about 150 VUCC grids (many more pre-1983), Worked All Continents, and quite a few other DX contacts. The states worked and the DX were all pre-1983 and there were probably a couple of hundred stations within easy tropo distance on the air at any time before1990 when no-code began. This from the VHF black hole of Southern Arizona.

If there were only a handfull of repeaters on, that would be wonderful as far as I'm concerned. That might actually teach many of the newer hams that it is actually possible to have a QSO without using an active repeater. Did you know that?

Furthermore, the argument for no code was that the code requirement was keeping out "technically-minded" folks that wanted to experiment, but thought the code requirement was silly. What did we get. For the most part a bunch of wives that use a FM handheld and a repeater to keep tabs on the OM and a lot of hikers, hunter, fishermen, etc. What "experimenting" and improving of the state of the art are these folks doing?

>
\>He may have bent the rules.

He DID bend the rules.

> He didn't lower the standard.

Yes, he did.

> The standard
\>was one minute of solid copy at 13wpm.

The standard was one minute of legible solid copy out of five minutes at 13 wpm, understandable sending at 13 wpm, AND a passed written test - all as part of the same exam sequence. The standard consisted of all those parts, not just some of them.

> I far exceeded that standard one
\>month earlier.
>
You met the requirements of the one minute at 13 wpm. You did not meet the standard of the General license. And part of the standard was that a prospective ham didn't get credit for previously passed tests if those tests didn't result in a license or an upgrade.

>> Shorty exceeded his authority.
>
\>Since he was the only authority present, I would say he used his discretion.

Nope. His authority was extremely limited. He exceeded it.
>
>> Suppose the standard was changed from "one solid minute out of five" to

>
>He didn't tell me he was bending the rules.

Of course not! Your highly developed sense of fair play and logic would have
caused you to stop him. By not telling you what he was doing, he avoided that.

> I'm still not sure that he
>bent the rules.
>
I am. He did. Not that it matters anymore.

>> >I wouldn't be surprised to find out that an FCC examiner had also done

>> who sold vanity calls many years ago. He went to jail for that, I

>understand.
>
>That partially proves my point.

How? The guy who sold calls was not an examiner, as far as I know, he WAS
caught, and the FCC made a big deal of it. The whole vanity call thing was
disrupted because of it.

> If it happened and you didn't hear about it,
>then the FCC apparently didn't consider it an irregularity. :-)

In other words, you cannot name a single case where an FCC examiner bent the
rules.
>
>> Here in Philly, ol' Joe Squelch wouldn't bend the exam rules one tiny bit.
>No
>> way. When he said you passed, you KNEW you passed.
>
>Given all the FCC examiners throughout the US, don't you think there might
>have been one or two who recognized a friend, remembered he had passed the
>exam with flying colors just a month before, and signed off on the code test
>without actually performing a second code test?

Nope. Not one. Anywhere. Ever.

Now if Phil Kane were to tell me there was such a case, I'd rethink my
position. But I see no reason to doubt the honesty and integrity of FCC
examiners of the past.
>
>> Your calling it a "crime" indicates you have some lingering guilt and

>
>Nope, it doesn't.

I am relieved that you don't have the lingering guilt and shame.

> I smoked pot in the past.

Stainless steel or cast iron?

>That's a victimless crime

"Victimless crime" is an oxymoron. Like "military intelligence", "jumbo
shrimp", "nondairy creamer", "tight slacks", "business ethics"......

> and
>I have no lingering guilt and/or shame.

That's good. Did you inhale?

>In fact, I wish I had some of that
>"one-hit-$hit" that I used to smoke in CA when I was young and foolish.

When was that?

I'm sure Phil will point out that the first order of proof
is that any specific equipment is, in fact, "equipment
NOT (emphasis added) authorized by the Commission."
That is the point in needing trained personnel to be
able to accurately make such a determination as to
the illegality of the equipment...AND then to be able
to convince judge and jury that it is so.

>  Likewise, the bill went on to say...
>
>       "(B) A regulation that prohibits the

>
>  Wouldn't the operation of a station causing interference be an
>"unauthorized operation?"

NO!  Not anymore than a ham station doing the same
thing.  The proof required is to be able to first
determine the specific operation of the CB station
as being illegal (unauthorized equipment, modified
equip., unauthorized CB frequency, etc.).

> If so, wouldn't this paragraph cover electronic
>interference situations when it comes to local enforcement?

Again, see my comments above.

"Johnnie-Cum-Lately" has to do with calling attention to your

something you've done for years.

>(Yes, Hong Kong is in China.)
>
Right off I'm as anti-regulation as anybody can get. We all know that
 in many instances the alternative to regulations is various forms of
behavioral anarchy.
>
Plymouth MN where you live has only 18,000 plus souls in residence. In
an 86,943 square mile state with a population of well under five
million. Politeness and civility work in relaxed enviornments like
yours for reasons which have been demonstrated many times over.
>
Cometh Hong Kong with a mind-boggling 7 million people packed into a
total of 422 square miles. You've been to NYC, you know that people
behave much differently in NYC than they do in Plymouth. When you have
people densly packed together they tend to be less friendly and
civilized and sometimes regulations have to be imposed to contol
rudeness. Like California has done with their smoker's bans. Hong Kong
has the highest number of cellphones per capita in the world by a big
margin and they're causing  problems you don't have in Plymouth. They
have an out-of-control situation and they're reining it in.
>
As the  populations everywhere mushroom over the years you're gonna
see more regulation of this sort before you see less. Has nothing at
all to do with Bejing or Chinese politics. Next up for cellphone bans
could just as easily be NYC or Rome as it is Hong Kong.

Check back a couple of postings in the thread, Steve. You will see
that the context was explicitly defined as US HF hams. English is
not a context free language. It is impossible to define the entire
context in every posting. If you don't take the time to understand
the context you will continue to make stupid blunders like this one.

Dick Carroll wrote:
> Not all HF works like Cb, Cecil, in fact little of it does.

The point is that VHF/UHF has some advantages over HF, Dick.
Mountain-top repeaters around the Valley of the Sun are one

of them. No HF frequency would do what we needed done unless
there were HF repeaters and there were not any. The only reason
most of those campers got their Tech licenses was to be able
to have reliable 2500 square mile full-time coverage. There's
no reason for those guys to want to get on HF, therefore no
reason for them to want to upgrade. A few of them who have
moved away from the Valley of the Sun have become interested
in HF.

A more qualified ham is not evidence of a superior human being,
Dick. Witness yourself.

 Who said anything about superior humans? We see that you have that all
sewed up tight. Everybody gotta have something to believe in, so you
believe you'll have another go at that 'one-hit $hit'. Right.

>Beasts! One of the ultimate boat anchors. Had ears galore but weren't
>much fun to operate the way hams use rcvrs.

Agreed! My point was not to recommend them, but simply to show that the usable
limit of HF receiver sensitivity was reached many decades ago. Many hollowstate
designs using 40 year old technology are still very competitive in dynamic
range, selectivity and sensitivity.
>>
>>Pretty good for a design from 1954, updated with tubes from the mid-60s. The
>>R-390A is a multiconversion general coverage design. A ham bands only design
>>could do even better.
>>
>. . . they were called the 75S series . .

Yup. All of them are excellent, but those late-model meatball ones....

And the Sherwood-modified Drake R4-C is a contender, too.
>>
>>Once you get below a microvolt or so, external noise usually dominates on HF

>test. I have no reason so far not to rank this little mobile rig's
>front end right up there with the 75S-3B's front end. Absolute fact.

Trickle-down effect. The technology developed for the top-end sets winds up in

the cheaper rigs eventually. Just like some of the work done to develop the IF system of the $700 SX-88 in 1954 wound up in the much-cheaper S-76, SX-96, SX-100 and SX-101 a few years later. Collins is an even better example.
>>
>The problem was local electrical noise which grabbed the agc. I

Sounds like an adjustable-gain preamp that optimizes itself for the level of signals received over the band.
>>
>>One reason why the published numbers are only a starting point, and why
>designs
>>from decades ago can outperform many "modern" ones.
>>
>Sure, some of 'em can and I was sure as hell no fan of the early solid
>state rcvrs. HRO-500: Whatta crapper!

R-1051 is a good example of that problem on the military side. Great readout, super stable, small, even had a matching transceiver version. Terrible dynamic range, though.

> I now have some solid experience
>with three current (+/-) solid state mid/high end rcvrs and they're
>all really decent, I don't have any major performance squawks even

TS-940 was a topend set for years.

>There's no question in
>my mind that today's solid state gear is very much up to snuff as far
>as performing as well as any of the tube-type radios ever did or can
>do. Not counting cheap clunkers of either type. Top-notch solid state
>front ends have arrived. When you add all the additional tricks the
>new radios do there is no contest and it can only get more so.

Yes and no.

Depending on the op and the tricks, many of them can be a waste of time and technology. How many of those tricks never get used because they are hard to access? In a typical SS contest, the game for most of us is to slowly tune through the band looking for new ones. Most of the tricks don't help with that.

One real problem with the new rigs is their short useful life and nonrepairability. Many newer sets use ASICS "application specific integrated circuits" and other parts. If one of those fails in an older set that isn't supported by the manufacturer, good luck getting a replacement. One solution is to look for junker sets, but that can be an expensive proposition. Rigs like the S line were made over such a long time period and in such quantity that parts and documentation are everywhere. Not so with, say, the TS-930.

End result is that the manufacturers WANT us to become "consumers" of their products, and to keep buying new ones every so many years. Can't balme them - it's just Marketing 101.

would you please explain the technical term "farkled up"?
Can a troll-o-meter be farkled down???
Where can I get a trollmeter??
Do I need one for 23cm?

:) ;)

Oh, I agree completely. Words meam what they mean. It's left up to the user to abuse the Englislh language by misusing them erroneously and completely out of context as you do, thinking that all those other dumshits don't know what you're doing. In fact everyone reading here knows.

Fact is people are forced. Forced to make a choice. Do I learn Morse code and pass a test on it, or do I just abstain from HF ham radio? To this day there has never been anyone who was ever forced to learn Morse code, for any reason (outside the military). It was always their own personal choice. End of story, although you will be "forced" by your own ballooned ego to continue it ad nausuem.

C'mon Dick. The first thing that all advanced civilizations do in the golden era sci-fi stories is replace English with some form of Newspeak to eliminate these senseless internal contradictions. Dictionaries are the simple listings of English as She is Spoken or Written. Do people speak or write with precision always laying out the context? Not bloody likely.

So words in dictionaries get divorced from context. The classic example is 'fix' which outside of its context can mean anything from a repair job to the preparation of a mortuni to film development to a heroin injection and many stations in between. Forced is just one of those many words that are context-dependent and are generally used where choice does not exist or is binary. If I have one amp flowing thru one ohm, one volt is 'forced' by the system; independent variables 'force' dependent ones. No one is holding a damn gun.

If I want a General ticket I take a code test. Binary choice. Only the context forces a damned thing.

Language expresses ideas but to some extent also causes or prevents ideas. As is often noted there are no direct English translations for Weltanschaung (?) or Weltschmertz from the German and no German word for 'sportsmanship'. Try New Testament Greek where 'religion' and 'superstition' are the same word.

Cecil is playing mind games. So let him play them. You are not 'forced'.

May the Shwarz be with you.

Dick BK

An addition or three. Harry Terraneau is WA6SXR. The "Condor Connection" is on the 220 band, is a network of 15 repeaters stretching from San Jose to San Diego, along the Pacific Coast and also through the San Joaquin Valley, reaches into Las Vegas NV, and Kingman, AZ. To find out details see -

www.condor-connection.org

According to this website, the Condor Net started in 1978. As close as I can remember Harry did his little demo from inside the Teledyne Electronics (Newbury Park, CA) facility in 1977. We were both employed there 1977-1978. I thought it was on 2 m and 70 cm but did not record the fact for all posterity (and posteriors that wish to comment).

The demo I got involved tone-coding selection of a PATH along the repeaters to any other repeater, along with an elaborate set of tones for many and varied purposes. Whether that was the beginning of Condor or another network, it was very impressive in demonstrating the innovation and engineering of a network in days before PCs and wondrous little ICs that were sub-systems on a chip. The organization alone is a big feat and was accomplished before Internet days let everyone (with access) communicate by e-mail with others.

Mt. Lee is the only tall location I can see from a corner of my yard in these Verdugo Hills. Today it has all sorts of parabolics on it plus other little structures for commercial communications.

In 1958 the first public repeater in L.A. was an excellent pioneering effort and showed dedication to the tens of thousands of radio amateurs who lived and still live in the greater L.A. area.

Two meters, 220, and 70 cm were all being experimented with, thanks to a number of amateur radio enthusiasts who were not continually rerunning the 1930s pioneering efforts 40 years later.

> You're so right Phil, I misread the multiple level attributions. I

Little Dick seems to fire off rounds without loading. If he isn't careful, resident morals cop Jam Kooley will come down on him for being abusive. Tsk, tsk, "loose mouth" indeed applies to Dicky.

I have just gone through a few pages of legal BS to find out all I can about antenna restrictions and the law, both ham and non-ham antennas. What has the FCC done as far as the restriction of external TV antennas? Can they be restricted by covenants? I know many beam antennas look like TV antennas.

I live in the worst place for any kind of "property modification" The Nazis are out in full force around here. I live in a regular house, not a rental or a condo yet I can't put up a single thing. The head of the neighborhood association lives right across the street. My property is downright crappy for any kind of antenna installation. The highest tree, an evergreen, is at the edge of the property and the guy that lives behind me is a psycho when it comes to the covenants. All the others would require tons of coax, underground runs, etc. There really needs to be something done about this. I am a teenager so I can't really go find another place to live. I have tried attic mounted antennas, the Ventenna (which won't fit over any of my vent pipes without being seen) and a variety of other things that should work but won't. Any news on new regulations regarding Hams and covenants?? Something really needs to be done about this.

If you type 0181 (I use the keypad) while holding down the ALT key, the mu
should, as if by magic, appear on the screen.

The � is ALT 0162
The integral is 0131
0176 gives �
0177 yields a very useful �

I use 0216 for �

Well the local would (IMHO) at least need a search warrant
to gain access.  Perhaps the interference complaint may be
enough for a judge to order a warrant in some cases.  Once that
is done, howeever, just what can the local do anyway?

I await Phil's interpretation.  My guess is no.  Indeed, what if
the person simply states to a cop...I don't have any station
at all.  On what basis then does the cop gain access...assuming
he had such delegated authority?

Cheers,
Bill K2UNK

Do you have an attic. Try an HF dipole in the attic for 15 and 10m.
I've worked many states and countries with just such a simple
set-up.

You can also do a small beam for 2m in many attics.

Try moble operating with an antenna on a motor vehicle.
You could connect it to a rig inside the house too (as
long as no one decides to get in and drive it away
while you're connected to it.)

>  I wonder how many appeals it'll take to clear that up?

  One phone call to the city/county attorney should do it......if
  they don't drop the matter at that point, they're open to big
  damages under Section 1983 - violation of civil rights by a
  state or local government under color of authority - in plain
  language, when a local or state government attempts prosecution
  when the law doesn't grant them that authority.  This is the
  catch-all section under which most of the large post-arrest
  settlements are made.

I do that for a living and it takes more than "a few pages of legal BS" to learn the ins and outs of the field, my friend.

But keep on reading.....

What has the FCC done as far as the
>restriction of external TV antennas? Can they be restricted by
>covenants? I know many beam antennas look like TV antennas.

Federal law protects installation of TV receiving antennas and small satellite receiving antennas against any unreasonable restrictions imposed by local ordinance, deed restriction, or homeowner association rules.

HOWEVER, this is very specific for antennas used to receive those signals, and does not offer any protection if the same antenna or one that looks like it is used for any other purpose, such as reception or transmission on amateur bands. The FCC was very clear on that point in the Order establishing that protection.

>Something really needs to be done about this.

The ARRL has tried for the last few years to get the FCC to assert Federal preemption authority over private restrictions or covenants against erection of ham antennas, and the FCC has continued to refuse to do so until or unless The Congress orders them to do so, as was the case with TV and satellite antennas. There are Federal constitutional problems involved.

Several states have started to have "mirror" statutes passed that assert STATE preemption of restrictive regulations against ham antennas, and at least two states are in process of including private restrictions and covenants in that preemption. Private restrictions and covenants are creatures of state law and the states can preempt them much more easily than can the Federal Government.

If you need specific help in interpreting the local restrictions (and fighting them if there are grounds to do so) it would be best

for you to contact a local ARRL Volunteer Counsel if you are an ARRL
member. Check the ARRL Web Site <www.arrl.org> for a list of those
in your area.

>Nope, no hidden agenda - just a love of the truth.

Cecil:

If you love the truth, then why are you investing so much time in this lie you're foisting on us about US HF hams being "forced" to take Morse code tests? The only ones who were "forced" are the ones who *feel* that they are forced, and as you've said, what we *feel* about the situation doesn't matter. This "force" is a very subjective thing; so far, you're the only person I know (in this newsgroup) who is making a big deal out of the force. Therefore, to this date, you have still failed to explain the relevance of "force" with regard to code testing -- and have been off-topic in this thread. Since we are required by circumstances to remain on topic within threads, please comply with the subject of this one and come up with a reasonable, rational explanation of this "force" you're talking about. We're waiting.

Who said it was??? The point is that a bunch of my friends who once
were CBers are now Techs because HF did not meet their needs and
VHF did. And HF still doesn't meet their needs.

> Oh, I agree completely. Words meam what they mean. It's left up to the user to abuse the Englislh language by misusing them erroneously and completely out of context as you do, thinking that all those other dumshits don't know what you're doing. In fact everyone reading here knows.

Everyone knows, eh? What a childish attempt at argumentum ad populum. Why don't you mount an adult counter argument, Dick?

> To
> this day there has never been anyone who was ever forced to learn Morse code, for any reason (outside the military).

You say you agree with dictionary definitions. The dictionary definition of "forced" is "required by circumstances". You are saying that US HF hams are NOT required by circumstances to pass a Morse code exam. So exactly where are all the US HF hams who used their free will to decide not to pass a Morse code exam??? There aren't any, Dick, because you are confused and absolutely wrong. ALL US HF hams were required by circumstances (forced) to pass a Morse code exam. Any exceptions obtained their privileges through fraud.

Yep, how we feel about it doesn't matter. In return for US HF amateur radio privileges, the US government forces all citizens who are granted those privileges to pass a Morse code test. That's what governments do, Larry. They enFORCE laws, rules, and regulations. How you feel about obeying those laws, rules, and regulations doesn't matter.

You have already admitted that your Morse code skill was produced with considerable effort. "Produced with effort" is your dictionary's definition of "forced". You have already admitted it, Larry.

"Forced" has a number of definitions. "Required by circumstances" is one of them. ALL US HF hams were required by circumstances to pass a Morse code exam.

I suspect you're slightly overstating the enforcement requirements. Since most of these cases would be minor (similar to "disturbing the peace"), lawyers familiar with the communications laws, such as yourself, are not going to be in that courtroom to argue such issues.

Why would a search warrent be needed? A cop does not need a search warrent now to enter a residence if it is obvious that a law is being violated (screams from the residence suggesting violence, loud stereo disturbing the peace, etc.).

A complaint about interference could be enough to suggest, at least when it comes to the local law, that a law is being violated.

Ray:

Don't get me wrong -- I'm not a dyed-in-the-wool Kenwood fan!
In fact, I think that most of their HF stuff is sheer CRAPOLA! The
TS-830 was the only Kenwood HF rig that was half decent, and I
emphasize the "half!" On HF, I'm strictly an ICOM or Yaesu man;
my present HF rigs are both ICOM's: An IC-735 that has been used
daily since I bought it new in 1987, and an IC-730 which I bought
used a few years ago because it was in like-new condition (and still
is) and also because I had (and subsequently sold) another '730 before
I got the '735. I've used a Yaesu FT-840 and think it's a great rig --
I would buy one if I wasn't getting all of my HF needs fully
satisfied by my trusty ICOM's. The smaller, solid-state Kenwood
HF mobiles have not impressed me in the least. Most of the ones I've
had hands-on experience with were weird by comparison to the ICOM
rigs I knew and loved. In fact, some latter-day Kenwood VHF
rigs I've owned, particularly the dual-band TM-252, have been
completely unsatisfactory. In reality, my satisfaction with Kenwood
rigs extends exclusively to the TR-7950 (not it's predecessor, the
TR-7850 which was more crapola) and the TR-9130. I think they
were jobbed-out to another manufacturer and sold under the
Kenwood name…what else could explain it?

How does one put a cell in test mode? I assume it differs by mfg'er.
How about a motorola brick phone?

I wasn't trying to make that point either. When I made the comment about 25 people, I was mainly referring to HF operators (the discussion was about why HF users were so upset with the no-code Techs - the topic that every single person responding so far has ignored).

The point I was trying to make was that HF operators were not widely using the repeaters, so why should they be so upset after the no-codes came along and did start using them. Now, please, of course some HF users were using the repeaters prior to the no-code techs, but their emphasis has always been centered on the HF frequencies (not on the repeaters).

I suggest you have that wrong. Unless there's threats of
violence, or bodily harm, I don't see any such waiver of the
need for a warrant.

> A complaint about interference could be enough to suggest, at least when
>it comes to the local law, that a law is being violated.

You need more than the mere suggestion or
belef that a law is being violated.

PRB-1 does go to over-reaching zoning.  PRB-1 does
nothing (so far) against association rules.

 Yes it does. But on an individual basis, at least with me. What torques
my
tail is when one whines because he can't have it all on the strength of
his codefree tech written test, or yesterday's equivalent. It merely
indicated a lifelong whiner of the first magnitude, and I won't cut him
any substantial amound of slack. I have lots of tech friends who never
do that, or they would likely not be my friends.

But don't worry, not everyone is cut out to be a CW operator. Most who aren't don't have a clue what they are missing and couldn't care less.

Based on on-the-air observations, it's been moved and seconded. The QCWA will no longer refer to tickets issued after April 15th, 2000 as licenses. We're going to call them 'Asshole Identification Cards' or AIC's.

They don't have to prove it. They simply hold a hearing and make a decision
to revoke the permit. It would be no different than the circus that it
takes to get a permit in the first place.

Only for legally operating stations. It was never intended to protect
free-banders/intruders/pirates, etc. Local zoning can completly ignore
PRB-1 in such cases, and in fact, often ignores it even in the case of legal
ham operators. You are correct...CC&R's are not subject to PRB-1, and the
FCC seems to be making no effort to extend coverage over such private
contracts, even though they have the authority to do so, and most CC&R's
look like "contracts of adheasion" (or "they got you over a barrel" type
contracts) to me.

So eleven years from now, every US ham will have an 'Asshole
Identification Card'?

And I would suspect that you hold AIC #1. Even as a 'troll' this
post doesn't rate very high. I'd almost recommend that you try again,
but it would still be a waste of time and bandwidth...

Perhaps some of the old time posters to this forum remember a rather nasty fellow, who used to post here, by the name of Michael Deignan from Rhode Island. Mike was a particularly nasty pro code test guy who proved what a fraud he was by faking a Hawaii address to get a KH6 call under the vanity program.

Well in addition to his fake Hawaii call he grabbed a bunch of club calls at the same time. Several of us told him the FCC would catch up with him and sure enough they did. Listen to this week's Rain Report. What goes around comes around Mike thanks to the FCC for the chuckle.

Sounds like you (personally) need a "hole in the ground" card to completely
resolve all of your identification difficulties.

Why do you persist in equating VHF operating with repeaters? As I asked before, do you know that you can actually communicate on VHF/UHF without using active repeaters?

There are hundreds of people with WAS on 2m and quite a few with DXCC. All this is going on while Mabel is calling Clyde on the repeater and asking him to pick up a loaf of bread before he is destinated. (If your name is either Mabel or Clyde, nothing personal)

So I 'repeat', it is possible to have an interest in, and use both HF and VHF and not have any use for active repeaters.

Note that I say "active repeaters." One of the biggest thrills in my nearly 45 years of ham radio was when I pressed my key, released it and 2.5 seconds later heard my signal returning from the passive reflector that we call the Moon. Too bad the people that don't know the code can't participate in this mode.

Andt it's a good way to have an intelligent conversation; you can always talk to yourself and not once hear the word "destinated." <g>.

Over and out.

Dick Elliott <elliotta@netusa1.net> spewed forth:
# Does anybody know the procedure for having an individual removed from the
# news groups if they are as caustic as this "gentleman"?  This type of abuse

Pretty hard to get someone "removed." Better yet, just add him to your
killfile and you'll never see another post from him again.

Matthew

"Phil Kane" <Phil.Kane@nospam.spam>
shared these priceless pearls of wisdom:

-> I just hit Shift-F12 on my text editor and the table appears.
-> Of course, it's a different table for each CodePage / CharSet.

I don't understand what you mean "on my text editor". My text editor is Notepad, and hitting Shift-F12 does absolutely nothing. When you say "on my text editor" do you mean "while I am in my text editor" or is there something I'm missing?

Or do you mean in a real word processor like Word or WP? Just a little more info for those of us who are lexichallenged.

> --
> http://www.mindspring.com/~w6rca

Cecil, Dick is not complaining about Techs as a group nor am I. We are reaping the results of fundamental dishonesty. I will give you two points to look up in your Funk & Wagnalls.

Point 1. The Tech is not and never was designed to be the entry-level license for HF amateur radio. It predates the codeless arguments so we can dispense with them. It was designed to serve a multiplicity of uses, all worthy but none of them in the mainstream of Amateur Radio. Some of them included:
a.   Real honest experimenters - all 12 of them.
b.   Wives wanting contact with the old man. The Bread-and-Milk thing which was the subject of a lot of dubious subterfuges of which I was once a major instigator. Every wife on our repeater was named Sally and had the same callsign, a 2x3 I once had for 2 months or so.
c.   Personal communication of the type you describe with your camping buddies. The FCC whatever else one may think of them has a habit of

encouraging communication. Good way to keep tabs on number one son when he is armed and dangerous on a hunting trip.
d. Taking some pressure out of CB. The spots were up then, too.

Without beating the point to death, selling the Tech as an entry-level ticket was and is fundamentally dishonest. In my VE days I did not administer them because I did not believe I was doing anyone a favor. As a practical matter I would not be called upon to anyway because of the necessity to keep the Advanced VEs occupied. In the context where Leland butted in, the discussion was advising the newbie. Guess what? I don't recommend taking Element 2 as an initial step either.

Point 2. This dishonesty, as lies have a habit of doing, has come back to haunt us -- certainly in the general environs of Newington CT. The Tech since it came into existence has been a dead end for a lot of amateur careers. When you get on phone, the time for code practice or working it never comes again. Larry was in the trap, so was I. So if nothing else our level of tolerance is not as great as some but we know every self-deception in the book. As Billy Sunday once said of Satan, "I know there is a Devil because the Bible tells me so and because I have done business with the bastard personally". I won't lead a man there any more than I would lead him to an open door to unlit basement steps.

At least prior to 1991 the Tech, at least in theory, had to pass 5 wpm so he had some idea of what it was he was evading. Since then, we have developed Lifer Tech Syndrome, Dick's bugbear. Characteristics of this syndrome, a big campaign dedicated toward deceiving both the world and oneself, include:

a. Joining NCI and playing like the code requirement was even a debatable issue within a five-year horizon. Never miss the opportunity to say or write 'Morris Kode'. Note Leland's nearly-indecipherable tag line.

b. Joining everything, subscribing to everything, going to Dayton every year. Activity signifying not a hell of a lot.

c. Entering into every discussion on 'leading edge' technology. Nothing, of course, is ever done just talked about. Knowingly pronounce everything in existence as a 'legacy mode'. Become the resident genius on arcanity -- you too can be the guru of 160 meter gray line propagation.

d. Where anyone has actually achieved anything, even a simple-minded code test, he must be attacked, unhorsed, and mugged. Larry has built a whole new hobby on these dipsticks.

e. Whining endlessly about slights real or imagined. The object, of course, is to punish verbalization of what everyone in the vicinity already knows. In communities of the terminally incompetent the crushing line is "You think you are better than everyone else." When the response is, "I not only think it I know it" it is time for the riot squad. Equality is another word for nothing left to lose -- or more precisely never having gained it to begin with.

I do not play the game nor do I tolerate it.

Dick N�BK

>ham operators.

And then the Berkeley City Council, that last bastion of anal
rententiveness, grants Stephen Dunifer and Radio Free Berkeley a
building permit and variance to put up their pirate FM antenna
mast several years ago even while their case was being litigated
in Federal Court....

Anything to screw the Feds....

>You are correct...CC&R's are not subject to PRB-1, and the
>FCC seems to be making no effort to extend coverage over such private
>contracts, even though they have the authority to do so,

They do not, absent a clear directive from The Congress, which
is what it took to get them to exercise preemption of CC&Rs
for TV and satellite receiving antennas. (I ought to write a
macro to one-key this statement...)

>and most CC&R's look like "contracts of adheasion" (or "they got
>you over a barrel" type contracts) to me.

I've been saying this for years.....

My "workhorse" text editor - which I use in conjunction with my

OS/2 mail reader (PMMail) and news reader (PMInews) - is The
Semware Editor (TSE) formerly known as Q-Edit. TSE is available
in DOS, OS/2 and Windows flavors, and demo/test drive versions
are available at <www.semware.com> It is a small but powerful
program and I recommend it highly.

My "real" wordprocessor is Word Perfect 6 for DOS (which
despite its name runs very well under OS/2 and Windows) and to
the best of my knowledge it does not have a character table
which relates to ASCII - it does have one which relates to its
own character numbering system.

I don't have the foggiest in how to do it in Notepad or MSWord
(or even if it is available) as I do not use them.

Sorry if I confused you.

Jim Weir <jim@rst-engr.com> wrote:
>I don't understand what you mean "on my text editor".  My text editor is
>Notepad,

In Windows Millennium (and earlier Windows versions) you can use a
applet called Character Map. In Millennium it's listed under
Start/Programs/Accessories/System Tools/Character Map. With this
applet you can copy and paste the non-standard characters into Notepad
or any other word processor. Also it will tell you the keystroke
combination to use to get the character if you prefer to do it that
way. Of course you must use a common standard font or the others on
the newsgroup will not see the character you intend to send...

The flaw in CW operation using the TS-50 is that you have to open the
case to adjust the sidetone level. That's tough to do when you're
tooling down the highway... =:-0

Evidently you meant to say 9-3=6, which was my point. We are three
hours apart, rather than 4. ;-)

The TS-690 is the same way. Nice feature. I guess it saved 'em a
couple bucks.

That is true...BUT you still have not shown one rational
bit of process to properly determine illegal operation.

>Local zoning can completly ignore
>PRB-1 in such cases, and in fact, often ignores it even in the case of legal
>ham operators.

That's one reason we have lawyers...to work against
such local zoning extremists.

>You are correct...CC&R's are not subject to PRB-1, and the

Yet the courts have held such CC&Rs to be valid for years.

Cheers,
Bill K2UNK

  Sonoma County in California (where Ron lives and owns a radio
  station) is the last bastion of regal supremacy of a building
  department which demands extraordinary and expensive things of
  applicants, private and commercial, and the people who hold the
  reins of entrenched political power stand back and watch the
  hoop-jumping with satisfaction.

>That's one reason we have lawyers...to work against
>such local zoning extremists.

  I've "done business" there....fortunately my client had a
  lot of patience and a deep pocket to keep him going during the
  process.

Of course there is, Bill. Think about it. I've already mentioned the screams, or other sounds of conflict, situation. Add to that the right to enter while chasing a suspect. And add to that entrance into a residence to put an end to loud parties and so forth (disturbing the peace). In fact, as I understand it, a police officer can enter a residence without a warrant anytime there is evidence from outside the residence that a crime is occurring inside the residence (a fight in a residence that is visible from the street through a window might be one example of this).

Cecil:

If I said I was a superior ham to you because I passed a 20 WPM
code test, I may have been correct. If I said I was a superior person
to you for the same reason (and only that reason), then I was probably

shooting my fingertips off on my 10-year old Northgate Omni-Key Plus™ Ultra keyboard, which is now 11 years old and still going strong. I digress. A superior ham is not necessarily a superior person. A very superior person could spend a lifetime without ever holding an amateur radio license. As I know you've seen me say numerous times, ham radio is not for everyone, and not everyone should be a ham radio operator. I don't believe in touchy-feely "inclusiveness" for it's own sake. This is why I have always supported a multi-tiered license structure as an incentive for hams to progress, including multi-level Morse code testing to ensure that a significant number of hams will be exposed to and possibly embrace the regular use of this most practical, effective, efficient, and universal mode of electronic communication. Therefore, a superior person could be a non-ham, and vice-versa. However, all kidding aside, if your inferiority complex is truly as bad as your last few posts suggest, I am starting to worry about you.

Cecil:

Neither is ham radio or anything associated with it, including the Morse code. And I was never "forced" to take ham radio tests (theory or code), driver's licensing tests, college exams, or anything else of that nature. I did it all on my own free will, and always had the option of not doing so as long as I was willing to accept the consequences of *not* doing so, that is, not gaining the privileges granted by taking these many tests. Therefore, there was NEVER any "force" applied, because the people in charge could have cared less whether or not I took these tests. People only "force" us to do things when they actually want us to do them against our free will. An enemy could "force" a prisoner of war to confess to war crimes, if enough "force" is applied to him. That's force. Nobody has ever been threatened, tortured, or sanctioned in any way for not taking ham radio tests or anything else of a similar nature. Your argument about "force" therefore, is nothing more than meaningless twaddle.

Lennie:

Pseudocode? Binary Code? Hammaurabi's Code? The Code of Conduct? The Code of Military Justice? ASCII code? Yep, the word "code" has four letters, but it isn't a "four letter word" in the conventional sense, since it normally has no meaning which can be considered pernicious, salacious, or otherwise of a negative nature. Just to set the record straight.

Well duh, Wes, of course I know that a person can communicate in VHF/UHF without repeaters. What a silly question.

Why would someone who does not know code not be able to participate in this mode? The very first moonbounce station I saw, in Italy, was using SSB voice. After that, I saw several other SSB moonbounce stations and witnessed a number of SSB moonbounce voice contacts. Now, unless the Italians are better at moonbounce then we are, I certainly see no reason why SSB voice cannot be used with moonbounce here in the US.

There are some advantages to "stealth" antennas. Like neighbors not knowing you as a ham exist, and thus can't blame you for any reception faults in their TV sets (even those that happen when you're not home).

A dipole made of somewhat thin wire would probably not be noticed. Arrange things so the coax feedline is at the body of the house, at an attic or upstairs window.

I worked Antartica with 100W with a crude wire dipole in the attic crawlspace of my apartment in Texas.

You'll need a transmatch of some sort most likely.

Maybe string a vertical antenna from the base to the top of the only tree you mentioned you have.

The "z" in the notes column indicates "direct access to law enforcement services". So if I am driving and get a flat, or see an accident, or see a log or furniture in the road, would it be possible and appropriate to call it into the police using one of these repeaters with a "z" note (assuming my cell phone is not working)?

Even if you stayed with code for better s/n, you could use automatic encoder and decoder to do it, no?

What a bunch of bullcrap, Dick. I don't know of a single person that wants to "have it all on the strength of his codefree tech written test." Instead, what most of us (Techs) want is to be able to use the capabilities that the FCC has authorized, without constantly being harrassed for using those capabilities differently then you might use them (in other words, stop endlessly judging us).

In addition, like all human beings, we would not mind a little respect - not as a ham operator (I know we'll never get that from you, no matter what we do), but simply as a human being who wants to enjoy life without all the endless insults (the crap you wrote above or the "no-code equals no ham" nonsense, for examples).

And finally, some (not all - some don't mind the code tests and some have no desire to upgrade at all) want an opportunity to upgrade without spending weeks learning an absolutely antiquated communications mode that very few, if any, outside of ham radio uses anymore. By the way, describing code as an "antiquated communications mode" is not a judgement, a put-down of code users, or even an opinion - it is a fact.

Now, every single person that I've met who feels that way is more than willing to meet reasonable requirements (the written tests, for example), so it is not an situation of wanting something for free. Instead, they all seem to be saying they want a fair price for what is offered (and learning Morse Code is not a fair price simply because you once had to pay it).

Well, by then, all the QWCA dinosaurs will have died off, so they won't
have to worry about it.

Beg to correct your misapprension, Gerald, but Mike was definmitely NOT a pro code test guy, rather very definitely the exact opposite, as he stated many times here **while he castigated all the whiners**. You guys leap to offensive anytime anyone disagrees with you for any reason, labelling the sucker a "pro code test" a$$hole. After all, if he doesn't agree with you on everything, what else could he be???

So you don't have a driver's license, eh? Aren't driver's license requirements enFORCED in your state??? If so, you were, along with everyone else who has been awarded driving privileges, required by circumstances (forced) to pass a driving test.

> Therefore, there was NEVER
> any "force" applied, because the people in charge could have cared
> less whether or not I took these tests.

There is force applied by definition, Larry. Enforced governmental requirements satisfy the dictionary definition of force.

> People only "force" us to do
> things when they actually want us to do them against our free will.

That's only one definition of "force", Larry. There are many others. You can use your free will to voluntarily submit to the force applied by the government. How you feel about submitting to that force is irrelevant. It is still governmental force. If you want to avoid going to jail, you are, by definition, forced to obey the laws of the land.

In return for privileges granted, the government forces its citizens to meet the requirements for those privileges. That's a dictionary definition of "forced". Therefore, citizens are, by definition, forced to obtain a driver's license in order to obtain driving privileges.

Once a noted wealthy ham went on a safari to Africa and came
home with a monkey. He brought the monkey to a club meeting,
and cornered the ham class guru. "I'll give you a hundred
bucks to get my monkey ready to take the Tech test". The guru
demurred. "Five hundred bucks." More denial. "A thousand
bucks." Finally the guru said "OK, but it will take 18 months."
"Deal" said the ham with the monkey and departed.

"Hey, old buddy, what kind of a deal is that?" said the guru's
pal. "Look", the guru said "in 18 months anything can happen.
The ham can die. The monkey can die. And even if not, you
ought to see some of those folks that I have to prepare....."

What's currently achieved on V/UHF used to be done with MF groundwave.
Power aside, look at the coverage your local AM broadcast stations have
on MF.   73, Jeff KH6O

In article <3AB38F1E.9C5BA97B@IEEE.org>, W6RCecilA <Cecil.A.Moore@IEEE.org>
writes:

>> After all, you can always manipulate the truth with wordmeistering as
>> you continously do here.
>
>Words mean what the standard of the language (the dictionary) says
>they mean. Sorry you disagree. Take your objections up with Random House.

Cecil:

Did you ever wonder why most words in the dictionary have more than
one definition? The reason is that a lot of words have more than one
definition, or "meaning." I own several dictionaries, and the smallest
of them, the Merriam-Webster Concise School and Office Dictionary,
assigns no fewer than six "meanings" to the verb form of the word
"force," i.e. "forced." Here they are:

force vb forced; forc-ing 1: COMPEL, COERCE 2: to cause through
necessity (forced to admit defeat) 3: to press, attain to, or effect against
resistance or inertia (~ your way through) 4: to raise or accelerate

to the utmost (~ the pace) 5: to produce with unnatural or unwilling effort (forced laughter) 6: to hasten (as in growth) by artificial means

The fact that there are several meanings to some words is because our language is a thing that is not at all carved in stone, as you would suggest. The meanings of words change, evolve over time, and differ in their context and application. You cannot hide behind an isolated definition that appears to prove some point you have yet to make.

Please notice that the meaning of *forced* that you are trying to attribute to Morse code testing requirements falls way down toward the bottom of the list. Apparently, you are trying to express the idea that US HF hams are being coerced to produce unnatural or unwilling effort when they prepare for, and take, the required code tests. I, and many others in this newsgroup, contend that this effort was taken on willingly, with a mature understanding that doing so would result in us attaining a practical and useful communications skill. You, by quibbling over this "force," are whining in different key signature, but it's still the same old no-coder song.

73 de Larry, K3LT

By the way, Phil, I thought of something after reading Bills message (and thinking about yours). Is there anything in HR-2346 that requires the local laws to use the same enforcement standards as the FCC? The bill does say that "a state or local government may enact a statute or ordinance that prohibits a violation of the following regulations," but it doesn't specify how those laws are to be written or enforced.

Therefore, what prevents these laws from being written differently than existing FCC procedures? For example, why couldn't the local law be written to handle these situations more like the existing disturbing the peace laws instead of an FCC enforcement effort? Under those laws, a cop can enter the residence without a warrant and issue a citation or make an arrest.

In our radio situation, why couldn't the law be written the same way - the cop can enter the home to stop the immediate violation (after all, the interference is disturbing the neighbor's peace) and issue a citation, or remove illegal equipment, as the situation dictates.

God, you guys can make a mountain out of a molehill. That wasn't meant to be taken literally (I didn't count the people). That was an obvious exageration intended to point out that there are more people now then there was years ago.

Depends a bit on the fonts in use on both sides but these are fairly universal. As you probably have discovered by now trying 001-0256 most either do not exist or are pretty useless unless you are into umlauts, etc. � Mad Richard MMI

Now you can ponder the question of the ages: were you 'forced' to use them.

Mark Twain in his newspaper days wrote two major 'exagerations' that in
later years he came to regret. One of these, a spoof on the local
bureaucracy, involved the discovery of a petrified man and the convening
of a coroner's jury to investigate his demise with proper posturing. If
you read it closely, the petrified man was sitting cross-legged with both
hands open, left-thumb to nose and the right thumb against the left hand.
But, of course, no one ever read it that closely so he was getting
requests for 'more information' for most of the rest of his life.

There isn't a lot of difference between playing with humor and playing
with nitroglycerin

Well, at least you admit to your well-deserved inferiority complex.
A more superior person wouldn't admit to that. BTW, since you have
admitted to being inferior to me, don't forget to refer to me as "Mr. Roll"
or "Sir" in the future! If you play your cards right, I may occasionally
refer to you as "my good man."

I'm not trying to pick a fight, Dwight, I just think that what you said conveys the wrong impression, even if it's not what you meant. In spite of the obvious exaggeration, you seemed to be making the point that no-code Techs are responsible for the occupation of amateur VHF frequencies, which isn't so. I'm not even sure that "more people" is right. Back in the late 70's and early 80's -- before no-code Techs -- the "CB boom" resulted in a *lot* of newcomers into ham radio, including (coded) Techs, and the amount of activity on VHF/UHF repeaters was huge. I wouldn't be surprised to learn that it was greater then than it is now, in fact.

kelly@dvol (Brian Kelly, w3rv)
shared these priceless pearls of wisdom:

Yes indeedy. Back in the glory days of DOS we all had the high ASCII
characterset posted by the computer. Does anybody know where to get a complete
printed list of the stuff that works these days?

Some of the old ASCII characters remain (alt-171 for � and so on) and some
don't. I don't have a clue what the mapping is today.

That's a federal thing, right? Is it affected by recent supreme court
rulings about not permitting citizens to sue the state government in
federal court?

I think Cecil found some of that "one-hit $shit" he's been looking for.

Why is a mountain a molehill only when it's your mountain?

Interesting discussion Phil!

The local governments, as you know involving Sonoma County, CA, have already found a way to de facto regulate radio transmission though the use of zone ordinances. The "set-up" is easy...they allow no antennas without a permit, and they issue no permits unless the "transmission facility" meets all FCC requirements (as well as conditions imposed by the ordinance) and has all necessary licenses and permits. They require that at all times such facilities conform to FCC rules, and if not, they can revoke the permit.

Thus a legally operated CB station (if any indeed exist in this country!) could meet the initial requirements and get a permit, but if it were found to be operating out of band or with illegal power, the permit could be revoked and the antenna ordered removed under normal abatement procedures. Such abatements are hard to overturn, as witnessed in the case involving an FM Broadcast station in...I believe Idaho. That case has gone on for some 10 years, twice to the state Supreme Court, and the station has lost at every venue. I think the tower has been removed.

The FCC has been asked on numerous occasions to overrule such over-reaching ordinances, but other than PRB-1 which only covers licensed Amateur Radio Service antennas, they have consistently failed to act.

  Not the same.  The recent case was over whether Federal
  private sector employment and handicap discrinmination laws
  applied to states as employers.  1983 specifically deals with
  the states (and locals) doing an action under color of
  authority where they have no jurisdiction to do so.

As I said "if they wanna' play, they gotta' follow the rules
of the game". IOW, if they want to make the same charge that
the FCC would make, they must employ the same standards and
procedures that the FCC would use.

I'll argue that in any court - and if there's a hole in their
probable cause, so much the better.

The good burghers of Beloit didn't think of that before pushing
Sen. Finegold to introduce that legislation.

 Yeah, but..... I keep having this nagging reminder from long ago when I
```

sat through a few law classes, some principle of "abandonment" or some such, when an authority consistantly and deliberately refuses or declines to enforce a statute or rule, something about a defense based on the fact that the law/rule was vacated "in practice" and is thus null and void.... Just how long can a rule stand as legal when untold numbers of gross violations are consistantly and flagrantly ignored by those whose responsibility is to enforce it, regardless of the reason? Isn't there a judge or appeals court up there somewhere who will say "Enough!"? I'm surprised that someone hasn't raised this before now.

It seems to me that lakes can have beaches but only oceans can have "Oceanfront
Property"
Maybe that's what you have in Minnesota instead of beachfront property.

Aw comeon Brian, you kiljoy... None of this tech stuff ever craps out, haven't you heard? And the local authorities have it all under complete and total control, every time, all the time. Right.

Dick

What I have right now on 2405.000 MHz is cordless phones. I know that they're phones because right after the signal starts, I hear DTMF in clusters of either 7 or 11 tones, then talking (sometimes ringing first). These phones are using Wide-band-FM modulation, while my radios use narrow band (+/- 10kHz; +/-12.5kHz off the center frequency and my radio doesn't hear the signal). Their signals appear to be spread over 1.5 Mhz when they come up, and not always in the same place. Sometimes, I hear them on the proposed output frequency for my planned repeater of 2425.000 MHz too. Some days, this doesn't happen, while on other days, I've counted over 10 occurances. This could be from different phones.
I don't have RDF equipment (and even if I did, it would probably not be on 13cm).

It has gotten to the point where I have considered writing my local FCC office for guidance, asking specifically what my legal obligations (if any) are in this situation: "IF a part 15 device is operating on a frequency that happens to be the input frequency of an automatically controlled station, does the control operator of that station have any responsibility in the retransmitted signal? Generally, in the amateur service, the control operator does, but under part 15 rules, the part 15 device operator has full responsibility not to cause any interference with other radio services. [Follow-up:] Is the mere presence of a signal that causes the automatic station to activate considered "interference" per part 15? [PS: Simply placing a PL/CTCSS tone as an activation requirement is not sufficient - there have been times where the phone's signal has broken the squelch. Apparently, the low tones are NOT filtered out of its audio.]

My system is sensitive enough (about +18dB just in the Drake 2880 downconverter) that it could be seeing a cordless phone from up to 5-7 miles away, let alone the increased sensitivity that it will have when in it's final configuration (pre-amp of another +13dB, plus using a base antenna of +15dB instead of the current mobile of only +7dBi, and mounting it on a tower, instead of BELOW roofline inside my house). Details at http://k6bde.home.att.net/repeater/.

Locally, I have talked with Fried Heyn, WA6WZO, who is in our local ARRL staff. Surprisingly enough, I did not seem to get any interference that I could identify as coming from LAPD. I'm about 23 miles west of Downtown, due north of the eastern edge of Santa Monica, up in the hills ("Brentwood").

Larry Roll K3LT wrote:
> You cannot hide behind an isolated
> definition that appears to prove some point you have yet to make.

Larry, you have it exactly backwards. It is precisely because there are multiple definitions of "forced" that I can choose the one I want and make a statement using that definition. I choose the valid definition I wanted and made that statement about three years ago. It is no less valid today than it was then.

> Please notice that the meaning of *forced* that you are trying to
> attribute to Morse code testing requirements falls way down toward
> the bottom of the list.

That doesn't matter. It's my statement so I get to choose the definition from the list of valid definitions. All you can do is ask what I mean by "forced" in that context at which time I quote the dictionary definition that I am using.

> You,
> by quibbling over this "force," are whining in different key signature,
> but it's still the same old no-coder song.

This discussion, in *concept*, has nothing to do with Morse code. I have very carefully made a very generalized conceptual statement: In return for privileges granted, citizens are required by circumstances (forced) to meet the requirements enFORCED by the government. That's what governments do. This applies to driver's licenses, pilot's licenses, home improvement permits, commercial wiring standards, commercial construction standards, amateur radio written exams, amateur radio Morse code exams, and thousands of other requirements, laws, rules, and regulations that are enFORCED by the government.

The concept applies to all privileges granted by the government in return for meeting the requirements. Morse code testing is absolutely not unique.

In order to be granted driving privileges for public roads, you and I were required by circumstances (forced) to pass a driver's test. Are you going to argue with me about that? Conceptually, it is the same as the Morse code test. The difference is that driving is not part of your religion.

It wasn't Dick who said it, Larry, it was you. We went round and
round about your statement and you wouldn't budge. You said you
were a superior *person* to me because you passed a 20wpm exam
and I didn't.

No, I don't have a copy of the posting and dejanews is screwed
up so I can't prove it but I'm sure many remember that exchange
about a year ago.

Actually, he wasn't forced by the circumstances of government regulations,
but he may have been forced by other circumstances such as the desire to
operate and the inability to do same without equipment.

> A more superior person wouldn't admit to that.

A man's gotta know his limitations. I am truly inferior, Larry, it's no complex. I'm even inferior to a paramecium. Did you know that a paramecium that is living today is virtually the same paramecium that lived 1000 years ago. Parameciums are essentially created by cloning so living parameciums today have been virtually immortal for millions of years.

Lake Tahoe has official signs pointing to its beaches.

The FCC does enough amateur and unlicensed "CB" enforcement
cases to avoid such a charge, and they keep meticulous records
of what they do to show that they do work such cases........just
not in the volume and with the notoriety that you or I would want
them to do.

I just hit Shift-F12 on my text editor and the table appears.
Of course, it's a different table for each CodePage / CharSet.

Your Alt-181 may be different from my Alt-181. Here's mine: [�]
A vertical line with an equal sign in mid-point pointing left.
I use CodePage 862, CharSet ISO 8859-1 (Latin 1)

All it takes is one counter example to nullify that argument "no one", and
Richard has provided one.

Quoted from a Richard McCollum post in rec.radio.cb

"Pecking orders come in several flavors. I will make no bones here that I
do not consider a Codeless Tech to be a full-fledged member of the
fraternity and in fact I refused to administer them as a VE"

> What many are "bugged" about is the lowering of requirements,
> especially for the highest class of license. Nothing more.

That maybe true, but for some I think it goes deeper than that.

1. You are pretty badly out of context but I meant it then and mean it now.

2. I do not participate in cross-posts. Pick a spot and I will be happy to take you on.

Dick

I am impressed, Lennie....Taht fourteen years of night school paid off!

Congratulations!

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

>CODE is a four-letter word, Larrie...

By the way, Lennie...Saw a box full of "Ham Radio" magazines at a ham fest this weekend.

Notable was the September 1979 issue wherein one Leonard H Anderson had an article published.

Of course I KNOW it wasn't YOUR article, Lennie, since there was not a single profanity nor slur against Amatuer Radio or Amateur Radio operators in it......

As a matter of fact, I don't remember seeing the words "Amateur Radio" anywhere in the peice. How odd.........

Of course it was a (theoretically) enlightening piece, but then anything that doesn't require interaction with other human beings doesn't tend to offend anyone.

The OTHER notable point was that he was selling them for $.25 at opening, and was offering them free midway thru the fest. I imagine that was symptomatic of the rag's failure in the first place.

I agree with respect to sensitivity and front end dynamic range (at
this particular point in history) but I don't agree that the
selectivity of the 390 is on a par with any number of even elderly
solid state ham xcvrs. When you start plugging cascaded INRAD filters
into the more serious ham xcvrs those xcvrs will hose 390 selectivity
big time. Crank in IF DSP tricks on top of the filters and the 390
selectivity comes up something I hope to hell I never have to deal
with again.

>
Fuzzy discussion. My view is that issues like incremental improvements
in dynamic range are the result of ongoing device development efforts
tubes and solid state types alike rather than via your trickle down
from older radios concept. Either the devices are out there or they
ain't and that doesn't have much if anything to do with the cost of
the radio. It has a lot to do with the newer radios taking advantage
of the latest state of the art when they get put together.
>
So now 54 freakin' years after transistors were invented their
distant progeny have finally caught up with tube front-end
performance. You might note that it did not take even close to 54
years for tubes to get as good as they got.
>
I think we're at a sort of crossroads now, continuing solid state
device development work will no doubt result in the availablity of
devices which will have dynamic ranges far better than any of the
hollowstate devices can touch with a ten foot pole. When that factoid
becomes more obvious the boatanchor toob radio lovers are just gonna
have to adjust to being patted on their diehard heads as far as being
able to claim that the nitty-gritty strong signal handling performance
of their old radios is still state-of-the-art.

Believe it. I can toggle between agc fast slow but not fast/slow/off.
Can't imagine why but except for the FT-817 I haven't been able to
locate any store-bought xcvr out there in the under $1K class which
provides the "off" option.

The op doesn't have much to say about front end performance, it comes
with the radio. .
>
>How many of those tricks never get used because they are hard to
>access?
>
Huge variable. Depending on the radio and the op the answer can range
from all to very few of the tricks. In the case of the big desktop
radios with slews of tricks available very few ops use all the
tricks. So far I haven't run into a situation where I can't quickly
access the controls normally used for for real-time operating.
>
>In a typical SS contest, the game for most of us is to slowly tune
>through the band looking for new ones. Most of the tricks don't help with that.
>
I have the same level of operating convenience and contols access with
both my Kenwoods that I had with my Drake & Collins boatanchors. The
TS-50 is much easier to operate than a KWM-2A. Try cw with a KWM-2
sometime. Plus the 50 is a compact mobile rig. The 940 has 15
old-fashoioned rotary knob controls. How many do ya need to run in SS?
Plus they have new capabilities like automatically variable tuning
rates, passband shaping, auto-following notch filters, all nine MF/HF
bands, voice synthesizers, computer interfaces, direct keypad
frequency selection, they're a helluva lot more stable etc. No way I'd
ever consider doing any even half-serious contesting with boatanchors
again.
>
The solid state xcvrs have too much panel clutter for my taste but
much of it is for optional memory tricks and is simply ignorable.
Whoever it was who thought that being able to operate an HF xcvr like
a Bearcat scanner had his head guess-where. Epitomized by the TS-2000.
94 front panel controls. Plus menus. Wunnerful. There was a two-wek
old 2000 up for grabs on e-bay by a guy who just couldn't stand the
clutter.
>

I read an explanation for the clutter. The radios are designed
primarily for the Japanese market and Japanese tastes. The explanation
was that it's very difficult to install antennas in Japan because of
the lack of real estate. So Jap hams who cannot put up antennas go out
and buy these clutter-boxes to be able to just diddle buttons for
their jollies.
>
>One real problem with the new rigs is their short useful life and

>
There was a multi-multi station in Ohio, forget the call, but they
just ran a bank of six 930s into six old Alpha amps of the same
vintage in the ARRL dx contest. All that gear is around 25 years old
and it still works fine.
>
When old radios finally die ya give 'em decent burials and move on.

>
Nothing new about that game. Collins produced seven different ham
rcvrs between 1946 and sometime in the 70s, each one supposedly an
improvement over it's predesessor. The ricebox builders are giving us
a helluva lot more radios & choices than the tube boatanchor builders
ever did.

Naw! It is because:
 Italy is a long way from here.
 The moon is a long way from here
 If Italy and the moon are both a long way from here that must mean that
Italy is close to the moon.
That is why they can do it and we can't. :-)

My guess is that the decode portion would have a hard time. You need a
pretty good signal to get even crummy decode from what I have seen. A guy
that was showing me his shack tuned in a cw signal and although we could
hear it pretty well the decoder he had still threw in a bunch of garbage

characters and dropped some letters. Since I haven't tried it I won't say
it won't work but I have my doubts. Give it a shot!

Confining the discussion to 2m, which I believe is the focus of this thread...

Really? You saw a "number" of EME stations that routinely make SSB QSOs? I'm
not saying SSB EME contacts do not occur, I have one myself; however, that was
with W5UN who has an antenna that covers an acre of ground.   Our Italian
friends seem to have a propensity to operate at---ahem--shall we say slightly

higher power outputs than most everyone else. Just ask their European neighbors, and this goes for all of the bands.

That is not to say that there aren't a good number of US EMEers using a pair of 8877s or something similar. I use one 8877 and have never run more than 1200W into the transmission line. I guarantee you that at this level, and with say four typical Yagis, you *will not* routinely work EME on SSB. Period.

The preponderance of EME QSOs is on CW. Furthermore, other "weak-signal" modes such as auroral and FAI distort signals so badly that CW is the *only* mode that is halfway intelligible.

If you are a code-illiterate person who wants to work 2m EME on SSB then be my guest. You will need a station with 10 to 15 dB or so advantage over CW to do it though. Maybe you think that is somehow "technically superior" to the "obsolete" CW mode, but I beg to differ.

Not likely. The trained-ear/brain (TEB) combination is a wonderful narrow-band tracking filter, character-recognition decoder that doesn't cost anything---well except for some small expended effort to learn a signaling technique that is simple enough many six-year-old children pick it up.

The TEB can easily decode signals with -10 dB SNR and many EME operators do -15 dB or more. In addition, a trained operator uses repetition to "build up" the information he is receiving. He does this despite Doppler shift, and several different fading modes that raise hell with machine read coding.

There are proposals for "more efficient" encoding schemes, but these all seem to require slower bit rates and lots of DSP and they just plod along at the same slow speed even when conditions improve. And for the uninitialed, there are "conditions" in EME propagation.

I don't foresee anyone winning the EME contest using one-minute long dashes, but what do I know. For now, I do know that the winners use huge antennas, lots of power and 20 WPM Morse code.

The guys that have 2m DXCC didn't do it on SSB or while watching a computer screen to see whether they worked a new one.

Sure it would be appropriate. Our club has one repeater set up
with "speed dial" to 10 area law enforcement agencies, including
FBI and BATF. We have never (in 23 years) had a known mis-use
of the facility.

Just playing with the idea, it occurs to me that you could use an automatic keyer,
and be fairly sure by repeating the keying and hearing the response that it was your
signal, even without being able to decode it. If you wanted to be really sure that no
moonie was interjecting extra characters to insult you or make light of your efforts,
you could tape record the return signal and slow it down. Come to think of it, you
could transmit it at 1 wpm or less, and then use a printed list of the morse
characters to interpret the return signal. There's always a way. :-)

Damn, I had another thought. You could use an automatic keyer, and repeatedly send a
signal, and have the repeated signal averaged in a memory, and probably do the eme with
less power than, say, limiting yourself to the wetware (TEB).

At the risk of revealing denseness(?) on my part, it escapes me as to
why anyone would want a whole fistful of callsigns?  I am quite happy
with the one I have, so why do people like the Tuckers, et al, want to
"hoard" callsigns?

Roy Tucker is a self-described "renegade". His weekly net on the 435
repeater is called the "Renegade Roundup". He probably thinks it's
funny to have all those calls. It's a way of exploiting a federal
system that he is critical of.

Anybody who claims to be inferior to a paramecium, apparently has a
superior sense of humor.  :-)

>
> 1. You are pretty badly out of context

I don't think so.

> but I meant it then and mean it now.

I have no doubt about that Richard. Fortunately there are few like you out there. How I, or any no code Tech, chooses to follow their interests in Ham Radio is up to us. We don't have to meet your personal list of "approved activities" to be considered "real" Ham Radio operators. If that does not sit well with your vision of things, too bad, cry in your coffee, and move on.

License class advancement is not the sole goal in Ham Radio just as it is not in other areas of life either. Not everyone wants, or needs, to reach the Extra Class level the same way as not everyone needs to get a Ph.D. in their chosen field.

You strike me as the type of Ham who feels one is not worthy of being called a Ham UNLESS one follows in the foot steps you seem to feel is the only path to that title. You also seem to be unwilling to let others follow their own course, their own interests, and make their own choices in Ham Radio. Your vision of the path to being a "real Ham" is not the only one, nor is it necessarily even a good one. So you attempt to do what little you can to impede to process by refusing to help, instead you elected to hinder the process by shifting the burden to others. Seems a pathetic attitude where if you can't have it your way, you just wash you hands of the whole thing, such as being a VE, when it has anything to do with no code Techs.

As far as my tag line goes, if you can't understand it, try harder. I know plenty of other Hams, and non Hams too, who know exactly what I'm talking about. I will give you a hint however, it's a tongue-in-cheek joke about CW. If you can't figure it out after that, then your a lost cause.

When a paramecium cell divides, two identical adult paramecium
are the result. If you are so superior, let's see you do that.

When *most* of us decide to push the envelope testing the government's
will, we might as well kiss our way of life goodby.

I've got cells dividing all over the place, Cecil. A billion for their one. Besides, you haven't proven that that is a superior feat to my preferernce for procreating in the human fashion. Once you talk a paramecium into doing that I'll be impressed.

Jerry Fallwell would get real mad at you for saying that human life isn't the most important thing in the universe.

The XYL used to blame me for causing QRM to our own televisions. I took great pains to prevent this,
including the installation of a lowpass filter on the antenna input and highpass filters on the televisions, to
no avail. I spend a lot of time on the radio, so she pretty much resigned herself to living with 'those dang
noises'.

Then one night the QRM occured as we were both watching the tube - the rig was not even powered on.
Her words were, "Oh, I guess it wasn't you. This time."

You just can't win.

What's currently achieved on V/UHF used to be done with MF groundwave.
Power aside, look at the coverage your local AM broadcast stations have
on MF.                         73, Jeff KH6O

Poor Gerald. Can't read his own posts. Accuses others of misreading them,
to wit:

> Mike was a particularly nasty pro code test guy...

Now go, again, and look up Mike's comments to the FCC re the restructuring NPRM and get back to us. If dejanews hadn't crashed it would be quite easy to retrieve a number of Mike's RRAP posts in which he specifically stated his belief in dropping code testing. Sorry you prefer to read with blinders in >on< mode.

It sure is remarkable how much self-damage you code haters have done to yourselves over your years of "I don't wanna". And there seems to be nothing you can do to heal yourselves...

I modified my TS-50 by installing an *external* sidetone level control. When working CW mobile, the background road noise is quite different at 75 mph than it is when operating in a parking lot. Also I sometimes use earbuds (for XYL harmony) and other times an external speaker. Sidetone level adjustment for me was a necessity...

Since the TS-50 comes with no sidetone adjustment, no internal keyer and no CW filter, I think you could say it's not really all that CW friendly. The only reason I have a TS-50 is that Ten Tec couldn't deliver a Scout for over a month, I had money to burn, and the TS-50 was the only other small HF rig available at the time (in 1994). That said, it's been a great rig. I installed the CW filter and have a Curtis K5 'lil bugger' keyer bolted to the side. The TS-50 is mounted on *top* of my dashboard. That makes it easy to operate without taking my eyes off the road. Unfortunately, this location also means that the rig gets very hot in the Arizona sun, especially when parked for a couple of hours. Also I have dropped it more than once, and have occasionally messed up by operating it full power into a bad load.
This is one tough little rig...

It is too bad as I remember he was most nasty to people who expressed
the opinion that code testing should be eliminated. He may have flip
flopped later but this is how I remember him.

Since this cannot reasonably be established let's amend my description
to "particularly nasty" and leave out the code position.

>
> It sure is remarkable how much self-damage you code haters have done to
>yourselves over your years of "I don't wanna". And there seems to be
>nothing you can do to heal yourselves...

How on Earth do you read that I am a "code hater" this is stupid even
for you Dick. I said nothing about my position WRT code in my posting.
I filed no comment with the FCC WRT the change in code speed testing
and if you are smart enough you can even determine that I once passed
a high speed code test. To that end I assure you that I never asked
for nor received any waiver on any Amateur examination in
fact I never have I ever failed any examination that I attempted.

The reasons I didn't bother to file a comment WRT the code test
question:

First of all I didn't really care what they did.

Second it was a done deal and there was nothing the ARRL or
you code whiners nor anyone else could do about it. I could
explain but you seem so comfortable in your bigotry I'll just
let you be.

Apparently I did "wanna" cause I "dida". Now Mr. Big Shot tell me what
you did to further ham radio in the past year aside from bitching and
recklessly accusing people when you haven't a clue what you are
talking about.

Why would you be so stupid as to post all this crap on the antenna
newgroup.  Please keep this crap in your own backyards.  Thank you.

I can see the fake Hawaii address to get that particular vanity call (I mean I can see the reason, but I can't say it was justified), but what *IS* the point of getting multiple club call signs? To get one you like? But the vanity system lets you do that.

Uh, Gerald. seems it was YOU who had no clue, and I merely
straightened you out.
Mikd Deignan's position WRT code testing was never in question, he made
that clear from the outset, all the while showing no sympathy for any of
the legions of whiners. Which, of course, and in complete accordance
with Dick McCullom's axioms, made it mandatory that he be attacked by
said whiners....

Beats me, I have no use whatever for even one. Evidently some guys do
it like mountain climbers --just because it's there.

That IS threats of violence or bodily harm.

>Add to that the right to
>enter while chasing a suspect.

How does that even remotely cover an illegal station
operation?

>And add to that entrance into a residence to
>put an end to loud parties and so forth (disturbing the peace).

They can knock on the door, but they can't just bust
in without a warrant. If the occupant(s) don't quiet
down, then there may be some justification, but I'll
defer to Phil's understanding of such a situation if he
decides to comment.

> In fact, as
>I understand it, a police officer can enter a residence without a warrant

>anytime there is evidence from outside the residence that a crime is
>occurring inside the residence (a fight in a residence that is visible from
>the street through a window might be one example of this).

Thatdoesn't cover an illegal (pirate) station operation
at all.

Cheers,
Bill K2UNK

FYI from R. Tannehill

I see that on March 6, the CEPT changed it's HAREC
Level 1 requirements from 12 wpm to 5 wpm.
It is generally believed that all the remaining European
countries who have not done so, will likly implement 5 wpm for
full band/power access.

The dominos are falling ever faster.

Cheers,
Bill K2UNK

Greetings All,

The following letter was posted by Ed, W5HTW on the QRZ board. He very carefully noted and logged the pirates he cites, and makes some very poignant comments on what NOT to do to these idiots.

Unfortunately, I think the lack of enforcement ON 11 meters has allowed the idea that the FCC will not search out or prosecute them has lent the feeling of security to them.

But I agree that getting on top of these clowns will do little to stop them. Keep it clear, log the information and let the FCC do their best to clobber them.

73

Steve, K4YZ

'BEGIN QUOTE:

Since March 16, 2001 I have noticed a group of Freebanders has collected at the low end of 40 meters. They were first heard by me on March 17 at 0315Z (March 16, 8:15 PM) on 6998.7 KHZ. I listened for about an hour before they signed off, after indicating they might move to 80 meters. However, they chose to quit.

When signing, they did use amateur type call signs, but please, read on.

On Friday night they were back. This time they were at 7.000.33 and drifted badly between that freq and 7.001.65 LSB. One of them had a relatively clean signal, the other had a severely overdriven signal, so much so it was difficult to actually determine its center frequency and make it completely intelligible.

On Saturday night the frequency was also used by another Freebander who switch to more CB lingo and extreme profanity. I have not heard him since, and his signal was weak.

The problem with this is a few hams can not appear to resist the need to get on the frequency and order these guys to move, or to spend a bit of time deliberately interfering with them, or jamming them with CW. This may thwart DF efforts by authorities. In addition, it may render tapes being made of the transmissions unreadable at places, with the result they can not be used for evidence. And finally, and quite importantly, it makes you, if you do this, as illegal as they are, and you may indeed be cited for such.

The best help is to listen! Make a recording. Send times and frequencies to both fccham@fcc.gov (the FCC's amateur radio complaint section) and describe what you heard (do not send WAV files) and to N4QX@arrl.org

Brennan Price, N4QX Field and Regulatory Correspondent ARRL--The National Association for Amateur Radio 860 594-0272 (work)

Be prepared to mail via regular mail a cassette tape to both the FCC site (get the address from the site) and to Brennan at the ARRL.

Please do NOT contact the people whose call signs appear to be used. While some of the call signs do not appear in the database, and are apparently "made up", some do. It is also 99 percent certain the hams to whom these calls are registered are not Freebanding. By telling them about pirated use of their calls, you may trigger an action by them in retaliation they may get them into trouble. Also, on the tiny chance one of these people is using his own legit call, you tip him off that he is identified. Most likely the call signs, all of them, are bootlegged.

These people claim to also be using 80 meters, and my guess is they are at or just below the CW band edge. Remember -- if they are NOT in the ham bands, they are NOT our concern!!! We have NO authority over them outside the ham bands, (well we have no authority anyway!!) but there is nothing to prevent us from notifying the FCC concerning the activity. Kind of like seeing a drunk driver on another road, one you aren't using!

But if they are IN the ham bands, or are splattering into it, they are the ARRL's concern as well as the FCC's, and you should contact both.

Thanks

73 Ed, W5HTW"

Translate that in to standard North American English with the correct spelling, and grammar. I hear better English spoken by the downtown "brothers" than what you wrote above.

I think there is another point to be made here that is being missed. That is if a non-coded Ham tries to operate EME, for example, he/she will soon learn that CW is much better than SSB for that mode of operation. THAT is the motivation to learn CW, a desire to work in an area where it TRULY is needed. No arm twisting mandatory CW testing required! I think that is how it should be. When the need to use CW in a facet of the hobby, that interests a Ham presents itself, the desire to learn CW will arise on its' own. This is no different than in any other hobby where the desire to participate requires new skills to be learned.

So to sum it up, CW skills should arise out of a natural desire to participate in some areas of the hobby. That interest then becomes the motivation to learn what is necessary. I would like to see mandatory CW testing eliminated, but that in no way implies that all non coded Hams will never learn CW. Some will because they either need it for their area of interest, or they enjoy using it in general. I'm just surprised that some Hams seem to act that if CW testing was eliminated that the mode will just disappear, it's not going to happen, and I think it's that fear that drives some Hams to want to retain CW testing at any cost.

Hello I stiil operate CB ... or GRS here in CANADA
Callsign here was until licences were dropped Xm421954

-=> Quoting Rmoretta@aol.com to All <=-

Rm> I think we can safely assume that YOU do NOT operate on 6 meters.
Rm> Guess where the first harmonic of some high powered CB transmissions
Rm> fall? Do your homework before posting... please.

And the 2nd hramonic lands in an aviation band used for gliding planes safely to ground in a storm.   Reminds me of the crash in

Toronto in the 60s.   A high-powered CB crashed a plane in a storm
when the plane crashed nearly into his house....It crashed closeby,
and this matter always stayed with me... I kept my power at 4watts.
Antennas were the way to go for me.

As for other postings here about lingo...Sorry I never used it.
I was innvolved in EMO where we used a International supported
way of communicating.... I have used this system ever since,
as well my callsign..and NO NICK or handle.

Aaron,

If I may, I'd just like to say a couple words about the TS50--all in agreement with you. It is, indeed, a tough little rig. I bought one in '94 as well. I have bought and sold at least a couple of them. I found both of them to be "punchy" little rigs with good audio on SSB. I only ran it on CW as a base, and, in that case, the sidetone was not as big an issue. All in all, I still like them, and would buy another if the need arose. I can surely see how the lack of sidetone controls could be a disadvantage while mobile. On the other hand, in Kenwood's defense, we should remember that this was the first foray into "mini" HF rigs. I can see how trying to cram so much into so little at a reasonable price was a challenge. When I first saw the TS50, I thought they gotta be jokin'. But, if I recall correctly, this little rig went to market with fewer bugs than even more recent mfrs' attempts, so even without certain features that would've been nice, the TS50 was/is a success. Like you said, it is one tough little radio.

Incidentally, I talked with the Kenwood rep at the Charlotte, NC hamfest a couple weeks ago and he said Kenwood is now working on the second generation of the TS50 which will include more accessable features, detachable face, and 6 meters to make it more competitive with other brands. If they keep the ruggedness and reliability of the original, it will be an awesome rig as well. I only wonder why they waited so long.

Best 73

>
> I modified my TS-50 by installing an *external* sidetone level control. When working CW mobile, the background road noise is quite different at 75 mph than it is when operating in a parking lot. Also I sometimes use earbuds (for XYL harmony) and other times an external speaker. Sidetone level adjustment for me was a necessity...
>
> Since the TS-50 comes with no sidetone adjustment, no internal keyer and no CW filter, I think you could say it's not really all that CW friendly. The only reason I have a TS-50 is that Ten Tec couldn't deliver a Scout for over a month, I had money to burn, and the TS-50 was the only other small HF rig available at the time (in 1994). That said, it's been a great rig. I installed the CW filter and have a Curtis K5 'lil bugger' keyer bolted to the side. The TS-50 is mounted on *top* of my dashboard. That makes it easy to operate without taking my eyes off the road. Unfortunately, this location also means that the rig gets very hot in the Arizona sun, especially when parked for a

This post mis-represents the official position of the QCWA.
In fact, QCWA supported the introduction of the no code tech license
and supports the elimination of the incentive licensing program.

A detachable face would be a nice feature to have. One of the more dangerous things for HF mobile operation (CW or phone) is to have to drop your eyes from the road to tune or adjust the rig. Mounting my TS-50 on top of the dashboard solved that problem, but it is somewhat unsightly, and perhaps a bit unsafe were a collision to occur. No matter how small the rig is it would likely feel uncomfortable stuffed in your mouth... :-)

>>Add to that the right to enter while chasing a suspect.

The key is CHASING - hot pursuit of a violator for a crime committed outside the residence in the presence of the officers or when the crime observed from outside the residence indicates an immediate threat to safety of life. Other than that a LEO does not have the right of warrantless forcible entry even to apprehend a felony suspect who has standing to be in that residence. In plain language, the cops can "break into" a residence to apprehend a burglar or robber or anyone else that has no right to be in that place.

>>And add to that entrance into a residence to
>>put an end to loud parties and so forth (disturbing the peace).

Even when we had to enter an unoccupied building (or in one case cross the deck of an unoccupied boat tied up to a residence) in the course of interference-to-safety-communications investigations, we had to get a warrant from a Federal magistrate.

>Thatdoesn't cover an illegal (pirate) station operation at all.

That is correct. The "enforceable" offense of unlicensed operation based on the use of overpower/out-of-band/uncertified

equipment takes place WITHIN the residence and by itself does
not pose a sufficient threat to safety of life to justify a
warrantless break-in.

    HUD, or "Heads-Up-Display" technology has been around almost three times
longer than cellphones.  Perhaps it's time to encourage the mfgr's to develop
an HUD for mobile communications or cellphones?

If you wait for legislation to fix your problem you'll probably be
collecting Social Security checks before you get on the air with a
usable antenna.
>
As a teenager you have your whole life ahead of you so first absorb
Lesson #1: Don't do to your kids what your parents did to you and buy
a home laced with cc&rs and Nazi neighbors.

The name of your game is beating the sumbitches and getting away with
an antenna else you'll have to wait until you get out of school and
into your own place and all that. Years from now. To hell with that,
teenagers don't relate to "years out" think. It's time for you to
implement anti-Nazi stealth technology, it's out there. There's an
applicable product which I've used successfully under the same
circumstances. The Wireman offers a combat-rated antenna wire which
you cannot see from a distance of more than maybe 30 feet away. Jump
to his website and check out his product #534 "Invisible # 26
Toughcoat Silky" antenna wire, 19 strands of copperweld with a really
tough dull black jacket. Snake a length of it into some tree at the
far end some dark nite and end-feed it.

I haven't put this one in the car yet, no clue. I'm not convinced I
wanna run cw while underway. I have two sidetones, one from the radio
and one from the keyer. The keyer sidetone level is front-panel
adjustable and booms when ys crank it up. I'll cross the mobile ops
bridge when I come to it.
>
>Since the TS-50 comes with no sidetone adjustment, no internal keyer

>
You're much better off with the TS-50. I got mine used for $500. I
just put the cw filter in mine and it makes the difference between the
radio being a pretty decent cw rig and a very lame cw rig. I wouldn't
take a TS-50 into one of the major dx contests as a serious competitor
but I ran quite well with it in the Russion dx contest and it's gonna
be my Field Day cw rig. For Field Day purposes the TS-50 will perform
just as well as my maxed-out TS-940. Which is a pretty strong
statement. I used somebody's TS-440 or some such crapper at the 20 cw
seat in Field Day last year, terrible radio in comparison with the
TS-50.
>
I'm living at a temporary qth where space counts so I opted for the
TS-50 instead of the TS-940 moose. I don't believe the dx pileups I've
been busting with the thing considering that it's design intent is to

be an underdash ssb rig. I used it with it's ssb filter as the NCS in
the "rrapnet" getogether, sure worked tits in that role.

>occasionally messed up by operating it full power into a bad load.
>
I did that a couple days ago. I'm using a 475 foot "random length" end
fed wire I tune with an MFJ box. I was working some Euros on 80 then
moved to 40 to listen on Monday nite. Heard a German calling CQ,
without thinking I simply hit the paddles & worked the guy. *After* I
worked him I realized that I'd forgotten to retune the antenna from 80
to 40. Brilliant maneuver. The swr on 40 was offscale. I hit the
paddles again, the FS meter needle didn't even get off the pin but the
power out indicator in the TS-50 showed a wee bit of power out. The
radio had sensed my stupidity and cranked it's power output down and
defended itself from me. The radio is fine. I was a lot more impressed
with that trick than I was with the unintentional qrp contact with the
DJ5.
>
>This is one tough little rig...
>
Absolutely, could not agree more, solid like a brick. Biggest bang for
$500 I ever got in ham radio.

  Public Cellphone Service was opened in 1981 in Washington DC.
  Do you mean to say that HUDs were around in WW-II ??

Care to tell us where on the FCC site you found it?  I find a reference to
it thru their search engine, but I can't find the actual document..

>

Part of this I can agree with, and part I must disagree with. Learning Morse code is actually a fair price to have to pay; not because I had to pay it or because anyone else had to pay it. It is a fair price to pay because that is what is required (at least for now). That may change in the near future. You can't go to Wal-Mart and say, "I think the price for this doohickey is too high, and that isn't fair. You need to give it me for less." When you go to Wal-Mart and see something you want, you either dig through the pocket lint to find enough money to get it, or you tell yourself it's too high a price and wait for them Rollback the price. Either that or you try to steal it and get nailed by the little old lady at the door. You can stand there and gripe at them for their outrageous asking price until your face turns four shades of blue and your head falls off. It doesn't matter. You don't get to set the price. They do. So, you just have to decide what you willing to pay. The very same principle holds true for amateur radio.

I'm not advocating one side over the other. Personally, I paid the asking price at the time. I started out as a no-code tech, but I sat down and studied the code and passed it, albeit at only 5wpm. I know there are those out there who say I am no more of a ham than they consider the no-code tech (it makes no difference that I was in the process of studying 13wpm when the current restructuring went into effect). I have a very dear friend who moved about 100 miles away making contact via 2m quite complicated I keep hounding him to upgrade, but he just won't do it. He plans to wait until they drop the code requirement completely, and that is his right. The price right now is too high. That's his decidsion. You have to make yours.

The above is just an opinion, and do you know what they say about opinions? They are like @ssholes. Everyone has one and they usually stink.

  I got mine sent to me in .pdf format by the legal librarian at
  my main client.  It's ten pages of small type listing the
  violation notices and monetary forfeitures that the Bureau
  released during February 2001.

  I searched the FCC web site and didn't find it there either.  I
  don't think that the newsgroups allow formatted attachments - I
  know that I don't appreciate them!

  Call the FCC Call Center <1-888-225-5322> and ask why it wasn't
  posted and then ask them to mail it to you.  If we all did that
  for every document that they list in the Daily Digest but do
  not post for downloading, they may get the message someday.

Not a good analogy. Wal-Mart is engaged in a relatively free market
with lots of competitors. If one doesn't like the price asked by
Wal-Mart, one can go to any number of competitors. If one doesn't
like the price asked by the FCC, what competitor can one go to?

Again, if one is to obtain amateur radio privileges, one is forced
to pay the price set by the FCC which holds a monopoly.

A paramecium may have us beat in division but humans seem to have the
edge in the ability to multiply...

Heck, you were the one who brought up "threats of violence, or bodily harm," which also has nothing to do with illegal station operation. I was just giving other examples, were a cop can enter a residence, to add to your rather short list.

>> In fact, as I understand it, a police

Never said it did - see above.

So what? If you want it, pay the price. If not, don't. There's no other hobby I know of which provides so many rewards for such a small investment.

Obtain a business license, driver license, hunting license, fishing license, etc. These are all "monopoly" controlled. If you want one, you pay the price (and they are a lot costlier than that of a ham ticket).

I think you're centering too much on FCC procedures. Again, I doubt local laws, written in response to HR-2346, will require the same procedures as those used by the FCC. Instead, I strongly suspect this will be added to the "public nuisance" laws (disturbing the peace), and local cops will use existing procedures under those laws to also enforce those interference complaints.

Of course, we'll never know for sure until some community actually decides to take on CB enforcement and actually writes a law. And, if we disagree with that law, we'll have to wait until it is challenged in a higher court to see if it will stick. Until then, all of this is pure speculation.

With that in mind, I think I'll back out of this discussion for now. Take care.

That's true. I have software on my computer that is supposed to send and receive code, but to be honest I never got around to hooking up the computer and radio. I have the proper cables, so I guess I'll mess with it one day soon just to see how well it works.

I don't think any specific subject is the "focus of this thread" at this point. :-)

> Really? You saw a "number" of EME
> stations that routinely make SSB QSOs?

Yep. I passed this house with a ton of antennas on it each day on my way to the local military base (Vicenza, Italy). When I saw the guy out front one day, I stopped and asked if he was a ham (radio amatoire, or something like that). Of course, that prompted a visit to his "shack" and a two hour discussion about radios and American hams (which ended with a determined invitation to visit again).

During later visits, he gave me a demonstration of his moonbounce capability (my main interest since I had never seen this before) and he took me around to meet a couple of his friends in nearby towns with moonbounce setups (we went to a third friend's house but he wasn't home). Since I didn't see a code key anywhere, I can only assume they were also using voice (though I never actually saw his friends operate).

As for how well he was able to communicate, that I cannot answer - his English was terrible and my Italian was even worse (he used Italian on the radio), but he didn't seem to be having any great difficulty and the signals sounded fine to me (not great, but I suppose I could have easily followed along if I spoke Italian better).

I agree and disagree with parts of it also, JW. As for my specific case, CW has never interested me, nor has HF. In other words, I'm pretty happy with what I have. Perhaps one day I'll make the effort to learn code (if I can every get away from the long list of other things that seem to eat up all my free time). In the meantime, I don't waste much time worrying about it.

About three years ago, BMW, or was it Mercedes? Anyway, a German car maker actually put a HUD in a few of their test cars and was not very impressed with the results (it seems their test drivers were distracted by it).

According to the article, it was sometimes difficult to read as distracting objects moved behind the display, causing the driver to strain to read the display (thereby taking concentration off the road itself). Several other problems were also listed, but I don't remember what they were at the moment (I only had a quick read of a magazine at a repair shop).

Anyway, as I remember it, the company decided to head back to the drawing board to see if they could design a less distracting version. And that was the last time I heard about a car maker actually trying it.

I wonder if any of the US car makers have tried it and what their results were.

Check this out. The psycho is attempting to pretend he's a regular human being.
Perhaps if you add one more crappy antenna to your
"look-at-me-I-gots-me-a-raydeeo-I'm-a-big-boy-momma" list, people will stop crossing
the street and hiding their children when they see you coming? And now, back to
sheep groping, Roger. Utilize all of your four years of schooling and try to limit
your spelling and grammar mistakes to less than five in your next psychotic
episode.

Yep. Also, it's a damn shame the Department of Transportation holds a monopoly on traffic regulations in this country, 'cause I'd like to switch to one that'll allow me unlimited speed on highways, as well as the right to drive the wrong way in a one-way street while drunk like a skunk.

Additionally, it is market forces that set the price that
Wal-Mart uses...it is not just an executive decision to
charge $Xand the hell with the consumer. If X is too
high, WalMart goes chapter 11.

>If one doesn't
>like the price asked by the FCC, what competitor can one go to?
>Again, if one is to obtain amateur radio privileges, one is forced
>to pay the price set by the FCC which holds a monopoly.

And the "price" set by the FCC is not based on any
competitive concerns.

Cheers,
Bill K2UNK

As long as the "price" set by the FCC is rational you'll get no
argument from me.  If the state you live in set a driver's license
price of $1000, would you just pay that or would you join the
voice of public discontent and demand rational fees.

Cheers,
Bill K2UNK

Public nuisance laws do not allow forced entry or warrantless
searches...at least not in any state I've lived in.

And I say again, no warrant, no entry, for any
CB violation. The reality is that the LEOs have no
expertise in making even a valid determination as
to who or where any interference comes from.

Then just how does Mr. local police officer
gain entry to anyone's home to examine an
aleged illegal station?

Cheers,
Bill K2UNK

I wasn't making a moral judgment, just an observation based on the
way things are. Wal-Mart was not a good analogy to the government.

> Obtain a business license, driver license, hunting license, fishing
> license, etc. These are all "monopoly" controlled. If you want one, you pay

Yep, that's exactly what I said. In return for certain privileges granted,
the government forces citizens to meet certain requirements. That's what
governments do.

Paramecium multiply just fine. I've seen more paramecium in a glass
of water than people in my home county.

Poor Kane, still dreaming about when he would jump in his rusty little
Toyota, mount the little blue light and play crime busters by hunting
down CBers running seven watts power.  LOL LOL LOL   Bureaucrats, such
clowns.

Speaking of which, if Silicon Valley is near San Francisco, does that mean that Germanium Valley is 0.5 miles lower?

You may have it confused with Polonium Pond or Francium Fields.
It's doubtful you mean Americium Acres.

The Gallium-Arsenide Alley is much higher, though.

Bill,

I do know that a city councilman in my city (Gastonia, NC) has this under advisement with the city attorney. Seems he has been plagued with a CB station in his neighborhood that has a "dirty"(?) kilowatt amp. He and his neighbors have been swamped by this guy for a number of years and have been unable to obtain relief. FCC was unresponsive. When he learned of this law, he immediately searched it on the internet and is now having the attorney do the research. I don't know if City Council will actually act on it, but from what I'm told, the councilman is going to push it HARD.

I found out about this from the clerk in a local store who lives in that area of town. Since he knows I am into radio, he filled me in on the details. The neighbors out there, from what he says, are very much in favor. As much as I sympathize with them, I can't very well tell him that I'm not exactly thrilled at seeing this come to pass! I think it is a BAD law that will cause trouble for innocent CBers, hams, or other legal radio stations. It *may* be that lawsuits will be filed against untrained LEOS and governments and, stung by these suits, they will bail out of the issue.

Jerry

Nope, we're doing our best to establish that in order to gain certain privileges (amateur radio privileges, driving privileges, flying privileges, etc.) a citizen is forced to meet the requirements dictated by the government.

What are the most active and popular Air force one and Secret service
Frequencies? I realize most comms are scrambled and encrypted, but it's
still fun to try and monitor something in the clear.

Interesting to note that we haven't heard that Beloit, WI,
the community that pressured Sen. Finegold to get the locals
jurisdiction, has passed such a law.

I really wanted to stay out this but ole weird Roger is in so many newsgroups and he is the type of guy that everyone would love (to put duct tape over his mouth). But I find myself wanting to show him what I was told about libel laws.

Libel is proven in a court of law when the words, spoken, uttered, written, and or published which caused the libeled to be embarrassed to the point of duress. Do you think Roger has reached that point?

Some one near Roger's city should try to find out if Roger, cross dressing as a person, and the gall of imitating as an Amateur Radio Operator, has a job. (I doubt it.)

Someone should find out if the EM99 in his signature is related to Emergency Management or the local police identifier number for one weird mental impaired first class nut.

Why. Because if someone could find this information out I am sure the employer would not keep him around and certainly not the Emergency Management Agency of "it's" county!

Times getting short Roger. Repent your wicked ways my son. The end is coming sooner then you think. (my son! If you were my son you would not be on the internet you would be sitting in the hospital recovering from having fallen into the computer monitor.)

get a scanner and sit outside 1600 with a rinky dink (highly technical term
i know) antenna andsee what you pick up ... More than likely it will be
digital (EDACS) and use DES (or 3DES now) for encryption.

last time I knew they were using 1.9m

Poor Public or Pubic or whatever, feels the need to crank up his 486 and
anonymously attack a man with experience and credentials. Did you have
anything to add to a discussion or aren't there any radio talk shows you

can call?

Actually I would think you'd be more apt to pick-up a couple of secret
service agents in your rear view mirror.

But these people would argue that the "price" set by the FCC (the code testing requirement) is not rational - it is not rational to still maintain testing for morse code when all other radio services have long ago dropped a similar requirement, or when code has been virtually eliminated in all other radio communitions (commercial, military, governement, marine, and so forth).

The code test requirement once served a purpose - to provide a means of code education for those who might enter other radio services and to provide a pool of trained operators to serve as a backup for other radio services during emergencies. Those purposes no longer exist today - the other radio services don't need people educated in code and CW is a very poor backup for cellular telephones, satellites, and electronic mail.

Once a paramecium multiplies, it reciprocates by dividing.
Dividing (by the reciprocal) is exactly the same as multiplying.

Bill:

Don't look now, but someone just kicked one of the sawhorses out from under the 4 x 8 sheet of plywood the dominos were set up on; they are now scattered all over the basement floor. A maximum 5 WPM code test may as well be no code testing at all -- and this is the ultimate goal. "They" are already there. It will be amusing to see how certain people will go about supporting and defending the notion of keeping the worthless 5 WPM code test, but I am not likely to be one of them. And, BTW, I'm not likely to be supporting the notion of "preserving" amateur spectrum, especially commercially viable UHF+ spectrum, from re-allocation to commercial users, either. It could be that now is the time to see if hams can do without a few billions of dollars worth of the spectrum they're not using.

J:

First, your "friend" who is too lazy to learn code even at the dumbed-down rate of 5 WPM deserves to be relegated to 2 and 11 Meters, which, from a standpoint of communications content, are virtually synonymous these days.

Second, any person who gains full amateur privileges with a code test at a speed less than 12 WPM is highly unlikely to pursue the regular use of one of amateur radio's most practical, effective, efficient, and universal modes -- that is, Morse/CW. Therefore, he is less of a ham than one who can/does use CW. This is an incontrovertible fact. Ever since April 15, 2000, there will always be two distinct "classes" of radio amateurs -- real, full-fledged hams who know, practice, and regularly use Morse/CW, and the inferior, lesser, diminished, and inconsequential wanna-bes who don't. (Memo to Cecil: you may wish to save this to use it against me in the future, as an example of how mean-spirited I am to lesser hams!) Ham radio is now in the throes of extinction, and it is no coincidence that it is doing so at a rate which tracks the speed at which telecommunications authorities around the world are reducing/eliminating Morse code testing requirements.

In an age where people from all walks of life now have access to instant, global communications, we are eliminating the only real challenge that remained as an attraction to intelligent, enthusiastic, and intellectually flexible prospective hams -- the code testing requirements. They not only offered a learning challenge, but imparted the ability to communicate in an environment of relative austerity under which the digital modes don't do very well. Therefore, we are losing all the very bright, eager, enthusiastic young people that the NCTA's claim were being turned-off by the code testing requirements. The truth is -- the people that are being attracted to ham radio are mainly middle-aged, white, working-class men, who have always been jealous of the capabilities of radio amateurs but could never overcome the inertia of their lazy, self-absorbed, and intellectually inert lifestyles. Their only desire is to gain the personal gratification of pushing a button and talking to someone a long way away. They are not going to invent revolutionary, high-speed digital techniques. They don't even know how to type. They can't even read and successfully follow the instruction manual that comes with a 2-meter HT. They need an "Elmer" to "guide" them into the "hobby" -- which, these days, means showing them which button to press, each and every time a button needs to be pressed.

You say you "paid the price" of your ham ticket by taking a 5 WPM code test. You still owe us 15 more WPM, my friend. And unless and until you pay up, you're not a "real" ham -- you're just what passes for one these days.

I don't remember Mike as "nasty" at all. He simply pointed out the inconsistencies he found in anti-code-test arguments.

His postion wrt code testing never changed. He did not "flipflop" - he was for 5 wpm from the start, and that only because of the treaty.

You can read his comments on restructuring (and everyone else's) at the FCC website

http://www,fcc,gov
>
>Since this cannot reasonably be established let's amend my description
>to "particularly nasty" and leave out the code position.

The comments he made to the FCC establish his position without a doubt.

Amateur radio covers a wide spectrum of methods and modes. Some people specialize in SSB, others AM, still others TV, low power, EME, and yes some CW.

Qualification for an amateur radio license covers that same spectrum. We are tested on the Rules and Regulations governing the service. We are tested on our understanding of proper and appropriate operating technique. We are tested on how a radio signal is generated and detected. We are also tested on modes of operation i.e. ssb, am sstv, atv, antenna design and operation. And. We are tested on our comprehension of digital modes of communication to include morse code. To say that we should not be tested on a segment of the service just because it is old, outmoded and not used for anything ignores the fact that code is part of our general knowledge and an important part of our heritage.
I, personally, have a tin ear with some hearing damage due to loud noise encountered during my working career. I passed the 5 wpm code test for Novice/Tech Plus Plus many years ago. As a novice I made a number of CW contacts poorly. I upgraded to Tech and remained such until last year when I was able to upgrade to Extra. No I am not a fully qualified Extra as defined by some but I did work to learn that which was required by the FCC to qualify for the license. I also learned more than that which is required. This is the price I paid for my chosen hobby. I have also used my knowledge so gained over the years as a communicator in Civil Defense, Civil Air Patrol, various places of employment for a total of atleast seven radio services. All of this because I took the time and effort to learn the code. I have not, to date, used my morse code knowledge for anything other than to take the test but I am glad that I do know it.

Let me say in closing that the comments of Dwight Stewart, while contrary to what I believe, are just a valid as mine and, who knows, may be right. I have noticed some comments in this thread that are mean spirited and meant to agitate not convey rational argument. So, by all means lets continue the dialogue but lets keep it civil.

Well, at least you passed the test, which adds a lot of validity to your opinion, pro or con CW. I personally find it hard to validate the opinions of those who condemn what they have never achieved.

In a trial, there is a thing called an expert witness. This person is allowed to enter their personal opinion on a subject as evidence because of their experience and expertise in the field of questioning. However, a common layman's personal opinion is disallowed due to lack of expertise on the subject.

Amen. It is obsolete, totally irrational, and part of the very definition of an Amateur in the treaty and will be for the next five years or so. Anything over 12 always was ridiculous.

Given that, what are you going to do about it? You could pass it, you could simply shut up and wait, you could send out for a pastrami on white with mayo, have sex, or expect rain. There are any number of wondrous things to be accomplished.

So for why are we treated to the self-serving observations on the obvious? Why not try to sell someone who matters? We are just a bunch of people who cared enough to DO it and know bullshit when we see it. I don't care if you pass it or not but please do not insult my intelligence.

Dick N�BK

Do a search and get yourself on the scan-DC mailing list. There are
a number of people who listen regularly there and plenty of stuff is
in the clear. Try around 165.xxx as SS stuff both in the clear and
otherwise. Listen on ADW 118.4 & 119.3 and various ground freq if
you are close enough. List server users report many other freqs.

That's true and I am one of those that believes the
price (code testing of any sort) is no longer rational.

Agree completely.

Cheers,
Bill K2UNK

>To say that we should not be tested on a segment of the service just
>because it is old, outmoded and not used for anything ignores the fact
>that code is part of our general knowledge and an important part of our
>heritage.

All true, but you don't consider that none of the other modes
are tested on a separate pass/fail basis as code is today.
I have no problem with adding some test questions to the
overall test/knowledge syllabus on code as a mode. There
is,however, no longer need to test anyone's individual
code ability as a stand-alone skill test on sending/receiving.
That's no different than not testing on ability to type
using a keyboard for packet or RTTY.

>I, personally, have a tin ear with some hearing damage due to loud noise

>contacts poorly. I upgraded to Tech and remained such until last year
>when I was able to upgrade to Extra. No I am not a fully qualified Extra
>as defined by some but I did work to learn that which was required by
>the FCC to qualify for the license. I also learned more than that which
>is required. This is the price I paid for my chosen hobby. I have also
>used my knowledge so gained over the years as a communicator in Civil
>Defense, Civil Air Patrol, various places of employment for a total of
>atleast seven radio services. All of this because I took the time and
>effort to learn the code. I have not, to date, used my morse code
>knowledge for anything other than to take the test but I am glad that I
>do know it.

You are an excellent example of why there is no longer any
need to mandate code skill testing. If and when you ever decide
to use code, you will be relearning much of the skill and ability.

>Let me say in closing that the comments of Dwight Stewart, while
>contrary to what I believe, are just a valid as mine and, who knows, may
>be right. I have noticed some comments in this thread that are mean
>spirited and meant to agitate not convey rational argument. So, by all
>means lets continue the dialogue but lets keep it civil.

That's all you'll get from me.

Cheers,
Bill K2UNK

The only "rights" involved are as follows:
1 - Everyone has a right to become a ham as long as they
meet FCC requirements.
2 - Everyone has a right to expect that the FCC requirments
are rational and justified.

Do you tell your kids not to jump out in front of a moving truck?
Is it because you have experienced it or just used your rational
mind to evaluate it? I understand lots of things at which I have
no skill or experience.

Larry Roll K3LT wrote:

> Therefore, he is less of a ham than one who can/does use CW. This is an incontrovertible fact.

For every mode you don't use, Larry, are you less of a ham? Maybe he uses three more modes than you do. You have already lost the war. You need to work on your delusions and get on with the rest of your life.

> In an age where people from all walks of life now have access to instant, global communications, we are eliminating the only real challenge that remained as an attraction to intelligent, enthusiastic, and intellectually flexible prospective hams -- the code testing requirements.

You didn't find it attractive, Larry. You admitted that you had to force yourself to learn it. Seems the reason you want to keep it is that you were forced (required by circumstances) to do it so you want everyone else to befall the same fate. You were born too late for that.

> You say you "paid the price" of your ham ticket by taking a 5 WPM code test. You still owe us 15 more WPM, my friend. And unless and until you pay up, you're not a "real" ham -- you're just what passes for one these days.

What's this "us" thing? You got a mouse in your pocket? Larry, anyone with a valid amateur radio license is a real ham. If you don't believe it, ask the experts on the subject, i.e. the FCC.

Yep, we know, Larry. If you can't have it your very own selfish way,
then you don't want anyone to have it. You're like the bratty little

kid who would rather break a toy than let another kid play with it.

The same can be said about pregnancy and child birth. If you can't get pregnant, or give birth to a kid then I guess that person's views on abortion are not valid either, right?

The argument that if you don't know CW you can't have a valid opinion about it is crap. I'm sure you can't get pregnant, but I'll bet you still have a valid opinion about abortion none the less, which is the same argument about CW, but in a different context.

What a load of crap! You want me to believe that only a Ham who can pound out CW is a "Real Ham"? Give me a break. There are code tested Hams who can pound code at 30 to over 40 wpm, but can't tell which end of a hot soldering iron not to grab. So a "Real Hams" only claim to fame is his code speed, but they can't even solder the phone plug on to the end of the cable, which connects their key the rig? And that is supposed to be better than the Ham who homebrewed his complete station, but never uses CW. If I didn't think you posted the above in a serious manner I would swear you were just Trolling for grins and giggles.

  Seems pretty clear that the target audience which they strive so hard
to convince is---themselves.

Uh, Cecil, anyone who has a valid license is a HAM RADIO LICENSEE. Many
don't know which end of the radio the on-off switch is located on.
Can't really consider them as Real Hams, can we?

It's not an argument, Leland, it's a fact. It is only considered an argument by those of you who have some reason to ignore the facts.

Only by learning it, gaining skill in how to do it, and working radiotelegraphy can you come to know the essential facts concerning it as a working communications mode.

You codefree types would much rather not even consider it to be a communications mode, and for darn sure you would never bring yourself to acknowledge that it is truly the most simple, easily implemented mode of radiocommunication, useful under the most wide range of daunting circumstances when virtually all other modes in common use are in the toilet, or not even available due to their heavy overhead amd infrastructure requirements. Nothing else even comes close.

So don't try to convince us that you will ever be a "Real Ham" � until you, too, are at least minimally qualified as a CW operator. Till that time you will be an Amateur Radio licensee.

Ahh.....
Now might be the time to see if the commercial users can hack the
jamming that such a situation could lead too !!!
But then that would be anarchy...

Have you checked the utility listings each month in Monitoring Times? They usually have some HF freqs in there.

>

Actually, the price the FCC sets is based on international treaty. Of course, that treaty will likely change in the next few years by dropping the code requirement, and the FCC will follow suit. Those that want HF priviledges will either pay the price and learn code or they can simply wait a few years until HF priviledges go on 'clearance'.

>But then that would be anarchy...

The deep-pocket commercial interests would hire two groups to take care of that problem in short order:

1. A commercial comm engineering firm (such as my major client) which currently uses the services of ex-FCC and ex-"spook" folks to locate and resolve interference cases for its public-safety and other land-mobile clients.

2. The Congress, which will direct:

    a. the FCC enforcement folks to use info generated by themselves or by Group 1 above for the resolution "forthwith" of problems experienced by said deep-pocketeers

    and

    b. the Justice Department to make horrible examples of anyone who is caught.

Believe it or not, catching "pirates" and jammers is usually easier than resolving interference.

Bill;

A comment you made below seems to fit the solution to the problem. If the code test was made part of the scoring of the written test just like the various segments of the present written then those who want to do code can study the code and have a section of the test that they will

```
pass and have other sections that they can slide on and still get their
passing grade.

Common sense and basic survival instinct are completely different than trying to impose your personal opinions to the general public on a subject in which you have no first hand knowledge or experience.

A perfect example of this is the anti-gun crowd - the vast majority of them have never even fired a gun, and yet they would have you believe that based on their feelings and opinions, you should have to give up your guns.

I understand how a nuclear reactor works, but I would never be allowed to testify in court as to the value of such a device to the general public. This is because no matter how well intended, the fact remains that my opinion on the subject is moot due to the fact that I do not possess the expertise necessary to present a legally valid opinion.

Oh Roger you go to so much trouble to find peoples information. You are so
sad as I said before. But this has gone on way to much especially since you
went from having fun with  me to my family and we just can not have that.
See you soon Roger. By the way you psycho freak, what have you done for your
country? Can you spell it. I will not see your reply because as I said this
has gone on way too long. Your plug will be pulled......soon.

So all the digital communications experts who don't possess actual
Morse code skill don't know the "essential facts" about Morse code?
If Shannon didn't possess Morse code skill, do you think he didn't
understand the theory? You think the FCC doesn't understand Morse
code? You're still beating that poor old dead horse. Hams who want
to use Morse code use it. Hams who don't want to use Morse code
don't use it. Every ham has a choice of his/her favorite mode(s).

Are you using the colloquial/slang "real ham" there, Dick? "Ham"
is in my dictionary. It says: "ham - 2. an operator of an amateur
radio station." So what's your official definition of a "real ham"?

The keyword here is "Hams". As used in your sentence, the implication is that a person you classify as a "Ham" possesses the skills to use CW if they choose to do so.

> Every ham has a choice of his/her >favorite mode(s).

Agreed, according to your definition of a "Ham". But what about those persons who do not possess the skill to operate CW? They do not fit the definition of a "Ham" as you use it here... because they cannot operate CW if they wanted to because of lack of skills.

Which is basically what the whole discussion is about... There are some who may have access to the bands, but since they do not possess the skills necessary to operate CW, by definition they can't be included in the group commonly referred to as Hams...

Prove it beyond doubt then. If the facts exist then list them or provide the necessary references to find them. I'm waiting.

Just why the heck would anybody in his/her right mind pay the ARRL to be a member? For what?
Who cares?
The ARRL is losing members day in and day out. They have to ask themselves, "Why?"

The real reason for this loss of members is simple.
1. It costs too much and you get nothing back.
2. The magazine is too full of voting and political agendas.
3. Nobody really cares about the ARRL.
4. The ARRL really doesn't care about you.
5. The ARRL has an agenda that does not help Hams.

Stealthy antenna are great an most owners associations don't mind them even when the association knows it's there.

The intent of most association rules on antenna's deal with the concern the antennas create an eye sore the impacts the value of the property.   In other words, the restrictions address aesthetics and not RF radiation.

Normally you don't have to worry about TVI because most people have cable or DSS. It really takes a lot of power to interfere in those cases. You should have no problems If your system is grounded good and your RF cable is made well and in good shape.

In my case, I can see my neighbors TV from my radio. I've pumped 10 meter, 200 watts into my dipole in the attic and see no problems with his TV. The 10 meter band seems to always be the worst cause of TVI. My next door neighbor knows I'm a HAM and we worked together to prevent any problems from poping up. I figure if it doesn't interfere with his TV then it probably won't interfere with any one else.
